Instructor J.B. Edwards

When an Incident Occurs...

It is too late to worry about:

- ✓ Leadership
- ✓ Planning
- ✓ Policy and Procedure
- ✓ Training
- ✓ Proper Equipment

“It is hard to make common sense when each person sees something different”

---- Karl Weick

**Leadership matters most when it
is least clear what course should
be followed**

---- Michael Useem

Sense making is about contextual rationality

Karl Weick, 1996

**To point the way to safety in the face of surprise,
leaders today need to develop resilient groups that
are capable of four things:**

- Improvisation
- Wisdom
- Respectful interaction
- Communication

**Mann Gulch teaches us that the real action
occurs long before decisions ever become
visible**

**By the time a decision needs to be made, sense-
making processes have already determined its
outcome**

This Training is about what we do

- **Is based** on 47 years of practical and actual police experience blended into the most current academic study and empirical research
- **Its focus** is to interpret replicated leadership and management theory into the practical application to achieve effective results
- **Its goal** is to promote the professional growth and development of supervisors, managers, and executives in the contemporary law enforcement profession by providing the resources and principles from evidence-based practices

This training is evidence-based

Police Leaders

Filstad, C. Karp, T. and Rod, A. (2025)

- Navigate a landscape marked by substantial, diverse, and complex challenges
- These include crime prevention, crisis management, inter-agency collaboration, and community relations.
- The current climate of heightened scrutiny and demands for reform have underscored the importance of effective leadership within law enforcement agencies.

- Police leadership now goes beyond personnel and resource management

It requires the strategic, ethical, and interpersonal competencies that are essential for the maintenance of public order and safety.

- Meanwhile, the context of policing, (e.g. societal changes, legal developments, technological advancements, and cultural shifts) is also evolving

Five broad themes that will shape the future of our workplace:

Gratton, L. (2025)

- Technology
- Globalization
- Societal trends
- Demography
- Carbon and the price of oil

We can Never Escape the Mystery of Life

- Leadership as a process of dealing with mystery that requires navigating uncertainty, ambiguity, complex, and contextual situations while guiding a person, team, or organization toward a vision
- Leadership involves guiding others through the fog of uncertainty, helping them understand and find clarity, while fostering resilience, adaptability, then adjusting in the face of the unknown

This perspective develops strategies and provides direction that transforms challenges into opportunities for growth and innovation.

Leaders must guide their organizations through contexts abundant with complexity, ambiguity, and unknowns

Ladkin, D., & Taylor, S. S. (2010)

- The difficulties and dilemmas of our times call for the exercise of judgement
- The ability to hold conflicting priorities and difficult emotional responses
- The ability to connect in a meaningful way with people dispersed across geographical distances and various cultural contexts

Leaders who can similarly embrace both their own contradictions as well as that of those they would lead, are best poised to discover apt responses to the challenges of our times

Leadership and Management Comparison and Contrast

MANAGING

LEADERSHIP

Instagram Twitter @milaniCREATIVE

“Is unnatural”

- **Management:** is about processes, systems, and functions
- **Leadership:** is about influence and motivation
- **Leadership roles:** emphasize tasks to be carried out
- **leadership styles:** emphasize behavioral modes and approaches in carrying out those tasks

Managing is "what" a leader does, and leading is "how" they do it Alimo-Metcalfe & Alban-Metcalfe, (2008)

Figure 1.2 Functions of Management and Leadership

Management Produces Order and Consistency		Leadership Produces Change and Movement
Planning and Budgeting <ul style="list-style-type: none">• Establish agendas• Set timetables• Allocate resources		Establishing Direction <ul style="list-style-type: none">• Create a vision• Clarify big picture• Set strategies
Organizing and Staffing <ul style="list-style-type: none">• Provide structure• Make job placements• Establish rules and procedures		Aligning People <ul style="list-style-type: none">• Communicate goals• Seek commitment• Build teams and coalitions
Controlling and Problem Solving <ul style="list-style-type: none">• Develop incentives• Generate creative solutions• Take corrective action		Motivating and Inspiring <ul style="list-style-type: none">• Inspire and energize• Empower subordinates• Satisfy unmet needs

Right*

- Status Quo
- Short Term
 - Means
 - Builder
- Problem Solver

Leader

*Do The right
Things*

- Change
- Long Term
 - Ends
- Architect
- Motivator

* From Warren Bennis

Management is...

- Organization
- Planning
- Staffing
- Directing
- Controlling

- **Management is about functions process and “control.”**
- Managers control systems, processes, time, costs, quality, and efficiency.
- Some good managers have a difficult time making the paradigm shift to leadership.
- **Leading isn't about controlling; it's about “releasing.”**

- John Maxwell

The Importance of Process

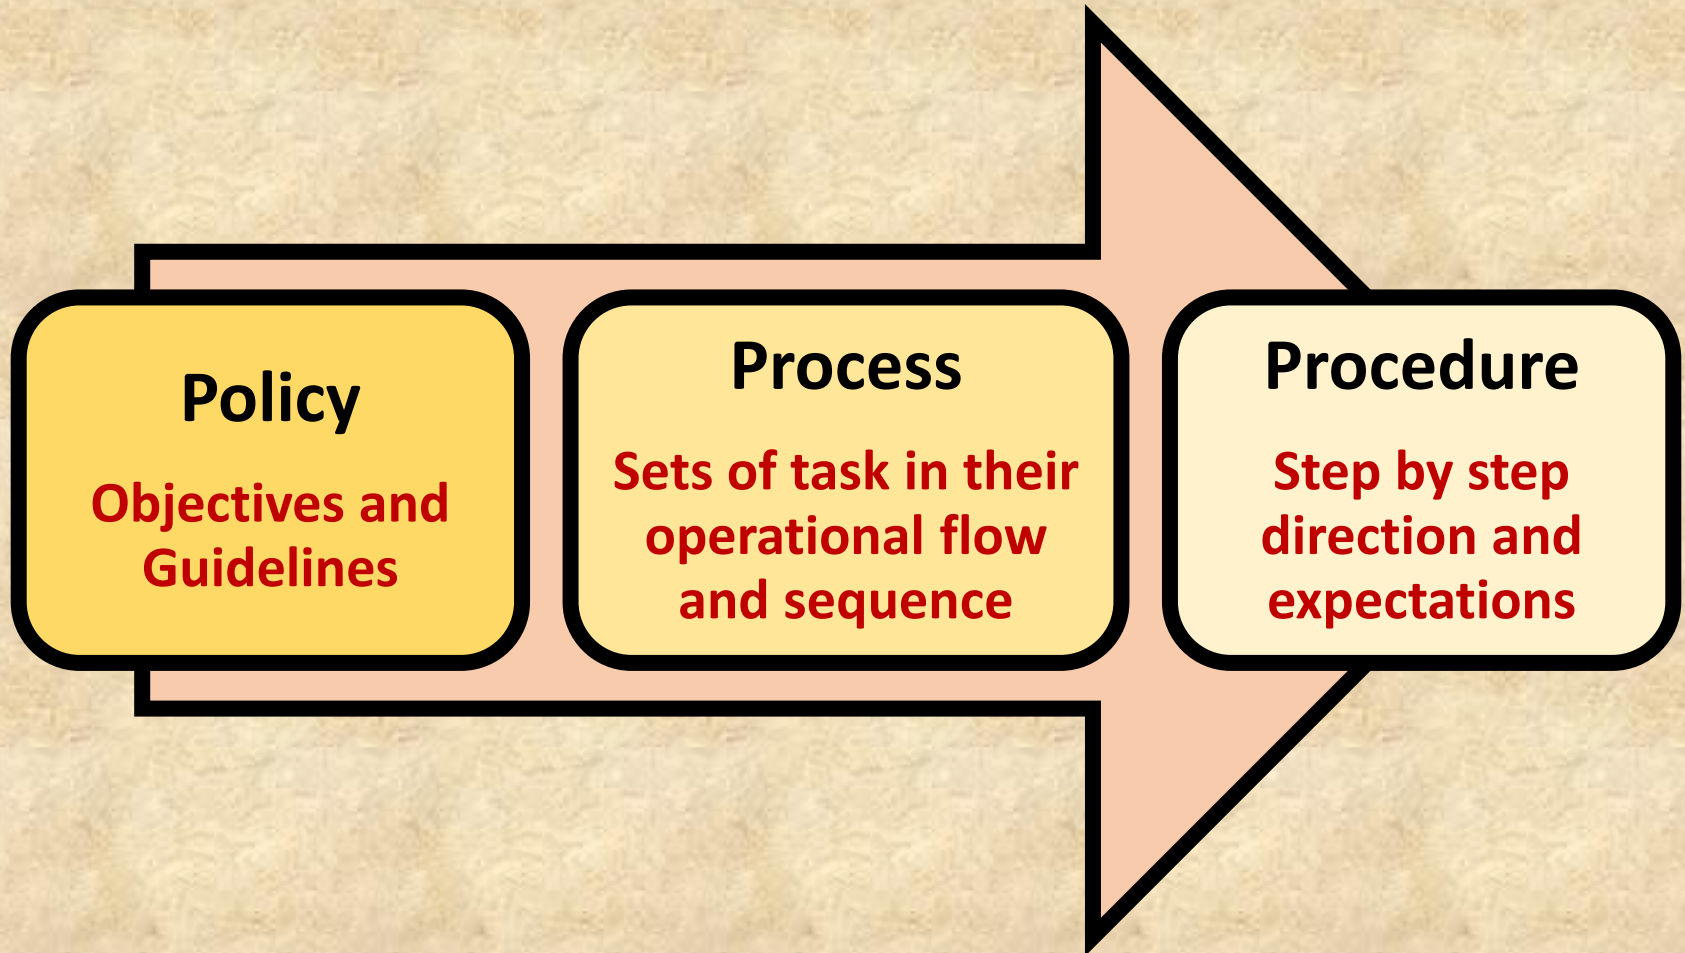

Structure, policy, and precedent

- Provide a foundation for consistency, efficiency, and accountability within an organization.
- Ensures responsibility and obligation to follow law, rules, and ethical behaviors
- They help establish clear expectations, guide decision-making, and minimize potential risks.
- A well-defined structure, clear policies, and adherence to precedent foster a sense of legitimacy, fairness, and predictability
- Leads to improved employee and stakeholder morale and overall organizational order and performance

- Structure, policy, and precedent work together to create a stable and predictable environment
- Employees can thrive, and leaders can effectively guide the organization and fulfill obligations and responsibilities to mission, goals, and objectives
- Working within the parameters and boundaries of process is paramount
- When leaders as managers circumvent or evade the process that put themselves and their organization at risk

Ignorance, disregarding, circumventing, or short-cutting the process has led to many serious problems, failures, and prosecutions

The Public Safety Trifecta

Revaluing management work in leadership: the frontline supervisor perspective.

Perry, S., & Davis, C. (2025).

- Frontline supervisors described themselves as leaders and understood their work in leadership terms.
- Findings reveal that the activities of frontline supervisors were predominately management work, management shown as a fundamental and inherent feature of their everyday practice.

The description of management work in leadership terms reinforces the symbolic value of leadership over management.

Leaders must Develop and Grow Five Key Meta skills

- ✓ Acumen (keen understanding)
- ✓ Critical Thinking
- ✓ Emotional Intelligence
- ✓ People Skills
- ✓ **Managerial Courage**

To see and balance their responsibilities on how they lead, manage, and command

Managerial Courage

- A voluntary, intentional action undertaken for a worthy goal when external circumstances are perceived to pose a threat or entail personal risks.

Wan, K.E. (2017)

Many internal and external factors can have an influence or role in driving, challenging, or impeding managerial courage

Managerial Courage emerges from self-emotion which acts as a “motivational force”—the power and energy—to do the proper thing in order to avoid the improper

Two kinds of managerial courage:

- **The Courage to Act:** is identified through participants' use of action verbs such as *decide, act, promote, affront, confront, impose, and move ahead*
- **The Courage to be:** in control of your emotions, objective, self-aware, tenacious, responsible, fair, and consistent

Three facilitators were found to be ego strength, self-confidence, and support

Adapted from: Harbour, M. and Kisfalvi, V. (2014)

Facets of managerial courage include:

- Being able to make tough decisions, when necessary, even if they are unpopular.
- Providing honest and constructive feedback to employees, which may involve addressing poor performance issues or propose improvements
- Advocating for what is right, such as voicing concerns and challenging unethical behavior or organizational practices.
- Taking responsibility for mistakes and failures rather than shifting blame.
- Adapting and adjusting in context that involve uncertainty

Leadership Emerges from Perspective (I see you) and Empathy (I feel for you)

- Where people experience integrity and trust
- Where they feel safe in their own jobs, absent fear of management
- Where people can voice their concerns, ideas, admit mistakes, or ask for help
- They experience fairness
- They feel empowered
- Where they feel support and care

Such develops the relational currency that accumulates by deposits into our accounts and can be drawn upon during the course of operations

Five (5) Important Principles at the Core of Leadership

- **Competence** blended with **care** is paramount to leadership
- The utility of **trust** is essential to **relationships**
- The quality of **relationships** is essential to **influence**
- **Influence** is essential to **Leadership and Management**
- **Leadership and Management** is essential to **culture**

There are eight core (zombie leadership) “axioms” or beliefs about leadership that persist despite being repeatedly debunked:

Haslam, S. A., Alvesson, M., & Reicher, S. D. (2024).

- Leadership is all about leaders
- There are specific qualities that all great leaders have
- There are specific things that all great leaders do
- We all know a great leader when we see one
- All leadership is the same
- Leadership is a special skill limited to special people
- Leadership is always good and good for everyone
- People can't cope without leaders

Practical takeaways

- **Challenge leadership assumptions** - be critical of popular leadership ideas that may be outdated or oversimplified
- **Recognize context** - understand that effective leadership varies depending on the situation, culture and organizational context
- **Develop adaptability** - focus on developing flexible leadership skills, rather than adhering to a single 'ideal' leadership style
- **Embrace diversity in leadership** - acknowledge that leadership can come from various levels and in different forms within an organization

- **Encourage shared leadership** - consider implementing structures that allow for distributed leadership responsibilities
- **Promote leadership development broadly** - offer leadership development opportunities to a wide range of employees, not just those in formal leadership positions
- **Be aware of biases** - recognize that perceptions of leadership effectiveness can be influenced by cultural, social and personal biases
- **Consider ethical implications** - be mindful that leadership actions can have both positive and negative impacts on different stakeholders

- **Foster self-organization** - explore ways to empower teams to self-manage where appropriate, rather than always relying on hierarchical leadership
- **Evaluate leadership critically** - assess leadership effectiveness based on concrete outcomes and follower feedback, not just charisma or position
- **Encourage followership skills** - recognize the importance of effective followership and develop these skills alongside leadership skills
- **Cultivate a leadership-friendly culture** - create an environment that allows for emergent leadership and values contributions from all levels

Implications for Leaders

- Develop a more flexible and adaptive leadership style
- Encourage leadership from all levels of the organization
- Critically evaluate personal leadership assumptions and biases
- Focus on building strong relationships with team members
- Regularly seek feedback on leadership effectiveness
- Experiment with self-managing teams in appropriate areas
- Implement systems that allow for emergent leadership in project teams
- Create frameworks for assessing leadership effectiveness in different contexts

Why this matters?

www.Oxford-Review.com

Special Report

Zombie Leadership beliefs, myths, and zombie leadership

September 2024

This understanding of zombie leadership is crucial for organizations, because it challenges outdated, oversimplified notions of leadership that can limit effectiveness and stifle potential

By recognizing and addressing these misconceptions, organizations can develop more adaptive, inclusive and context-appropriate leadership practices

Definition of Leadership

The process whereby one or more members of a group influence other group members in a way that motivates them to contribute to the achievement of group goals

Haslam, (2004); Smith, (1995); Rost, (2008)

Three (3) Critical Perspectives

Reicher, S.D., Platow, M.J and Haslam, S.A. (2007)

- Leadership can never be just about leaders
- Leadership should focus on power through people, not power over people
- Leadership is never about “ME” it is always about “US”

These ideas can be illustrated in terms of four (4) key elements of leadership

- Being one of us
- Doing it for us
- Crafting a sense of us
- Making us matter

Leadership as Identity Management

This identity leadership has four key elements:

- *Creating us*
- *Advancing us*
- *Representing us*
- *Embedding us*

C.A.R.E.

Five Important Questions those under your Charge

Wisdom, J. (2023) MIT Sloan

- What's going well?
- Where can I help?
- What are your top priorities these days?
- Is there anything new or upcoming you'd like to put on my radar?
- How are you feeling outside of work?

The Greatest Sin in Leadership is Leading by Assumption

Maxwell, (2023)

Assuming:

- You know what your people think
- They're on the same page with you
- They are “on-board” your leadership train

Contemporary research considers leadership as a dynamic relationship between three components: leaders, followers, and the context

- The context encompasses complex interactions between organizational stakeholders and the outside environment (cultural, social, and political).
- The importance of relational dynamics of leadership and followership: engaging, fostering consensus, and driving change.
- **[We must]recognize interhuman respect,** empowerment (coaching and mentoring), trust, fairness, openness, and empathy as fundamental qualities of leadership

Akande, A., Coker, D. C., Antoniadou, M., Goryunova, E., Doohan, L., Adewuyi, M. & Mişcoiu, S. (2025)

3 Domains where Leadership Emerges

Ibrahim, L. Y. (2016).

**External
Factors**

**Coming from
people and
situations**

**Internal
Factors**

**Stemming
from within
the leader**

**Leadership
Role**

**Arising from the
nature of the
leadership role**

THE ME

Critical to Understand

- Leaders aren't given crowns through coronation, investitures, inaugurations, or enthronements.
- **Leaders ARE NOT ENTITLED (Rank is not a gift)**
- Leaders are delegated responsibility from higher order to see to the standards, vision, mission, roles, and responsibilities of the agency AND care of their people
- Leaders are accountable to the rule of law, their commander, and the people under their charge

Leadership “EMERGES” through the people and the circumstances at the time, then develops influence

put yourself first.”*

A Leaders Worst Thought is... “I Deserve”

5 Levels Of Leadership

(By John Maxwell)

Types of Power

Formal power

Positional Power A position or title that gives someone authority within an organization or system. Also referred to as “legitimate” power.

Reward Power The ability to confer rewards to other people.

Coercive Power The ability to punish people for noncompliance.

Personal power

Expert Power A person or thing which is considered to be especially knowledgeable about or proficient at something.

Referent Power The power of the network either through existing connections or the ability to make new connections.

Source: John French and Bertram Raven, “The Bases of Social Power”

Leading Diverse Groups of People

Why Reverent Power is Important?

Five bases of social power identified by French and Raven (1959): Coercive, reward, legitimate, referent, and expert. Later Raven (1965), added informational to make six.

- Referent power is the ability to influence others due to admiration, respect, and identification with an individual, essentially stemming from the leader's personal qualities and likability.
- People are more likely to follow or agree with someone they like, respect, and see as a role model.

Characteristics of Reverent Power

- **Not based on position or authority:** Referent power is earned through personal qualities and relationships, not formal titles.
- **Builds strong connections:** It fosters trust and loyalty between leaders and followers.
- **Motivation and inspiration:** Leaders with referent power can inspire and motivate others to achieve goals

Benefits

- **Increased motivation and productivity:** Followers are more likely to be engaged and motivated when they feel a connection to their leader.
- **Improved relationships:** Referent power fosters trust and respect, leading to stronger relationships.
- **Enhanced collaboration:** People are more likely to work together when they feel connected to their leader and team

WHY IT MATTERS

- Referent power is considered the most potent because it doesn't require that a leader micromanage, use coercion, or reward to influence others.
- According to French and Raven, referent power has the broadest range of influence of any power, allowing it to be leveraged on a large scale.

People follow a leader with referent power based on who the leader is and how they behave.

Leadership is power through people, not over people

Everything is built upon a “ROCC” of Trust

Mishra & Mishra, (2013)

Reliable: you can be counted on

Openness: honesty, integrity, and complete transparency

Competence: able to perform to meet or exceed the job expectations

Compassion: genuine interest in the needs of another and unselfishly working to fulfill those needs

KEY FACTORS FOR THE LEADER

How do leaders gain or lose credibility?

Daniel Han Ming Ching, Tae-Yeol Kim, Brad Gilbreath, and Lynne Anderson.

Why People Believe in their Leaders – or Not.

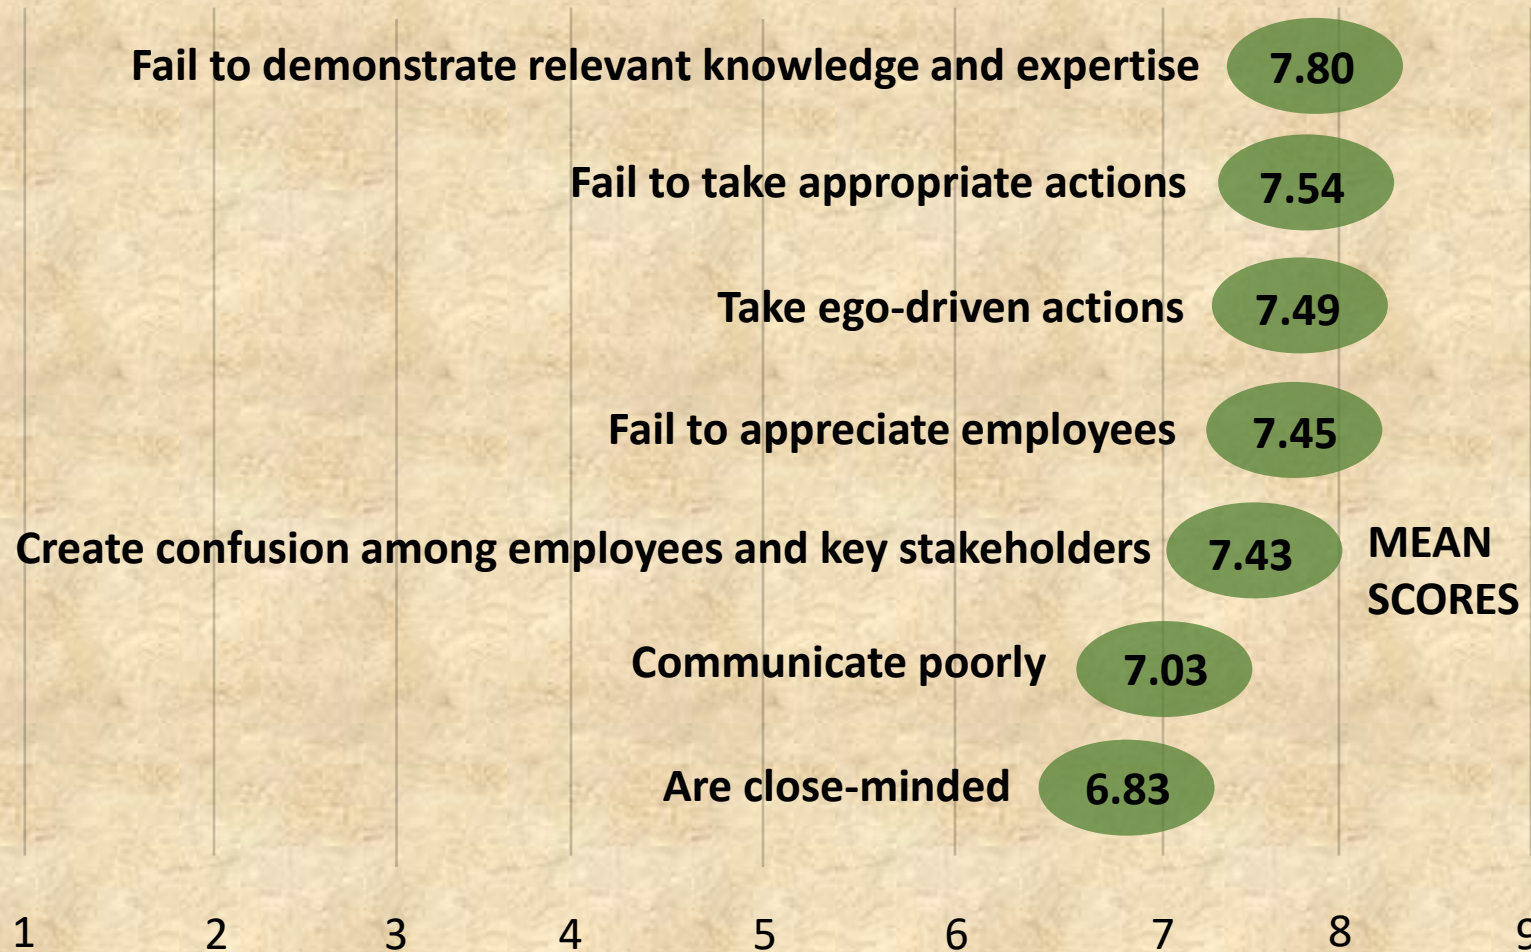

MIT Sloan Management Review. Fall 2018 Vol 60 No 1

- Behaviors that reflect competence and trustworthiness enhance credibility
- An inability to demonstrate relevant job knowledge hurts credibility, as does behavior that isn't aligned with the organization

Leaders are viewed as competent when they...

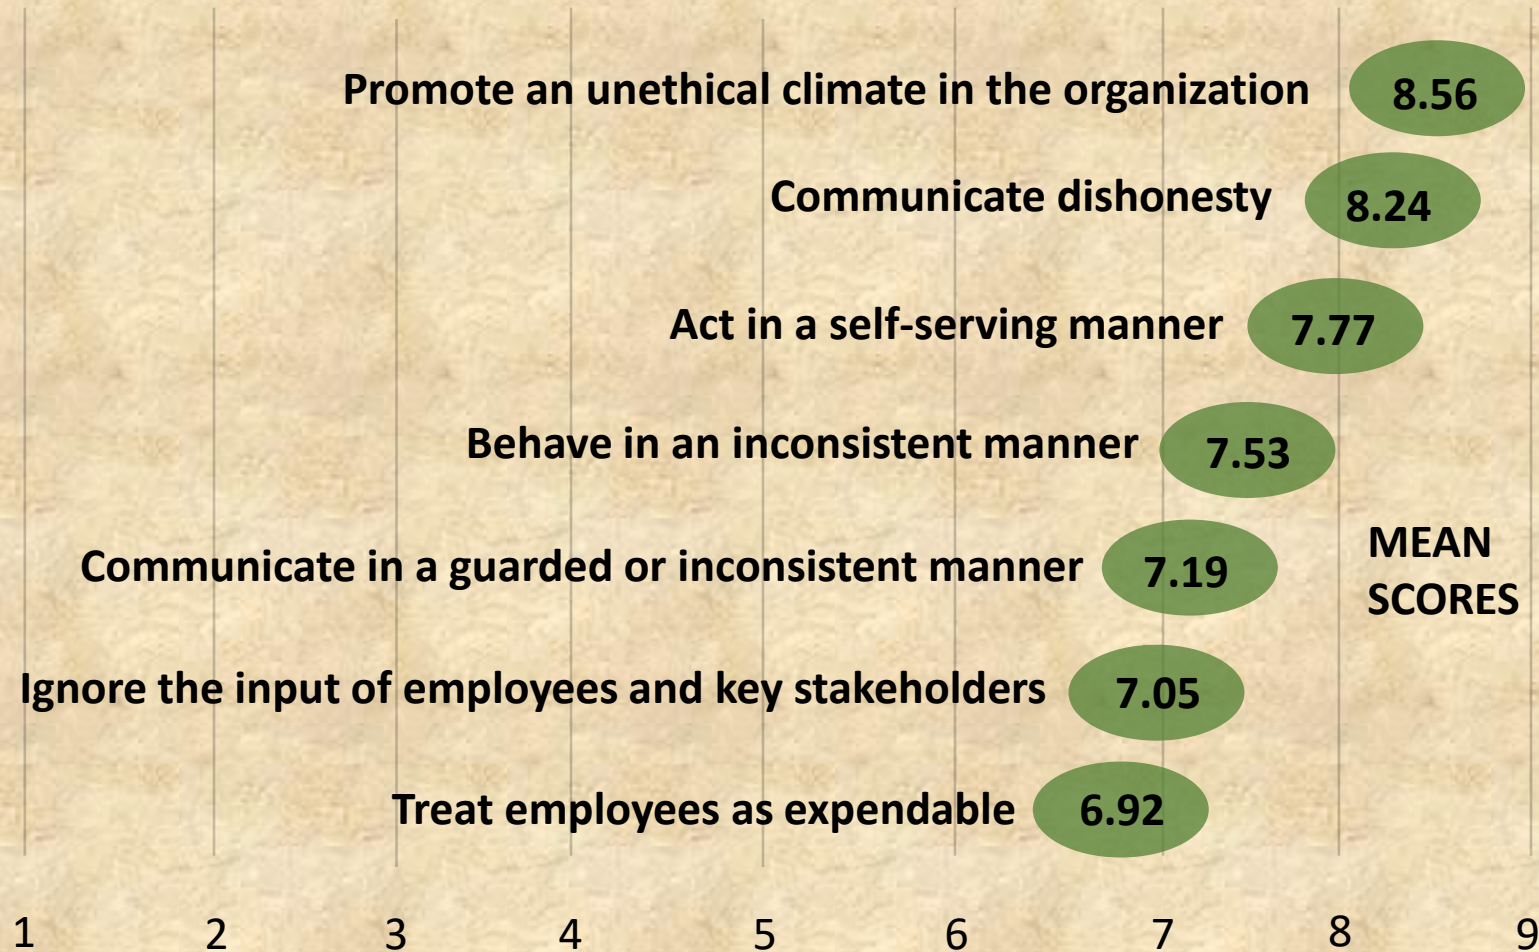

Leaders are viewed as incompetent when they...

Leaders are viewed as trustworthy when they...

Leaders are viewed as untrustworthy when they...

Competent Leaders are Valuable and Respected

- They see things others don't see
- They are confident
- They are consistent in their expectations
- They cause and promote development
- They translate knowledge into action seamlessly

➤ **INCOMPETENT LEADERS FRUSTRATE AND STRESS**

✓ **COMPETENT LEADERS MOTIVATE AND PRESS**

George Mason University integrative review of leadership studies over the last 20 years found

Zaccaro, Green, Dubrow, & Kolze, (2018) Oxford review, (2019)

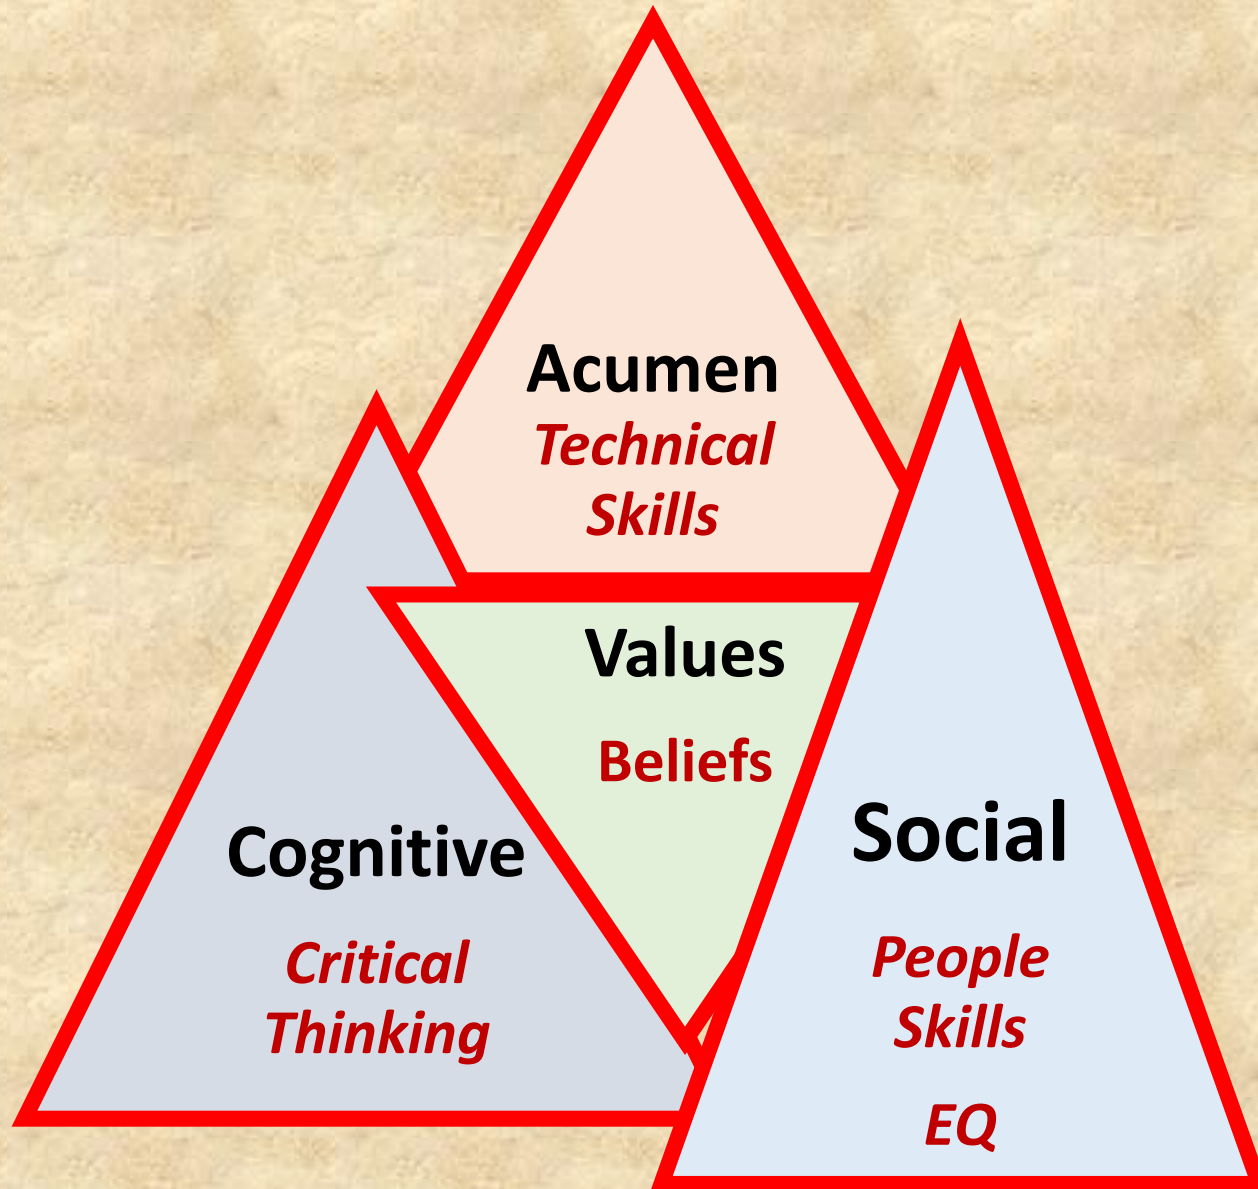

- In terms of leadership development there is considerable scope for helping leaders develop the ability to control their outcomes by working with them on their:
 - Cognitive capacities
 - Social capacities
 - Core values and beliefs
 - Knowledge and skills (including emotion regulation skills)

Additionally, the research found leaders that:

- Acquire a more developmental mindset, (as opposed to a fixed mindset)
- Understand and develop their foundational traits in leadership capacities
- Increase situational flexibility and awareness

Leadership Capacity

Zaccaro, Green, Dubrow, & Kolze, (2018)

Responding Appropriately

Crosby, B. (2017)

Moral and just

and Social
Intelligence**

How we think

Cognitive

Socio-Emotional

Ego's nexus to Hubris

- Ego refers to a person's sense of self-worth and identity, often leading to confidence, sometimes excessive.
- Hubris, on the other hand, is an extreme form of ego, characterized by overconfidence, arrogance, and a failure to recognize one's limitations, often leading to negative consequences.

Excessive pride or self-confidence, often leading to arrogance and a disregard for consequences.

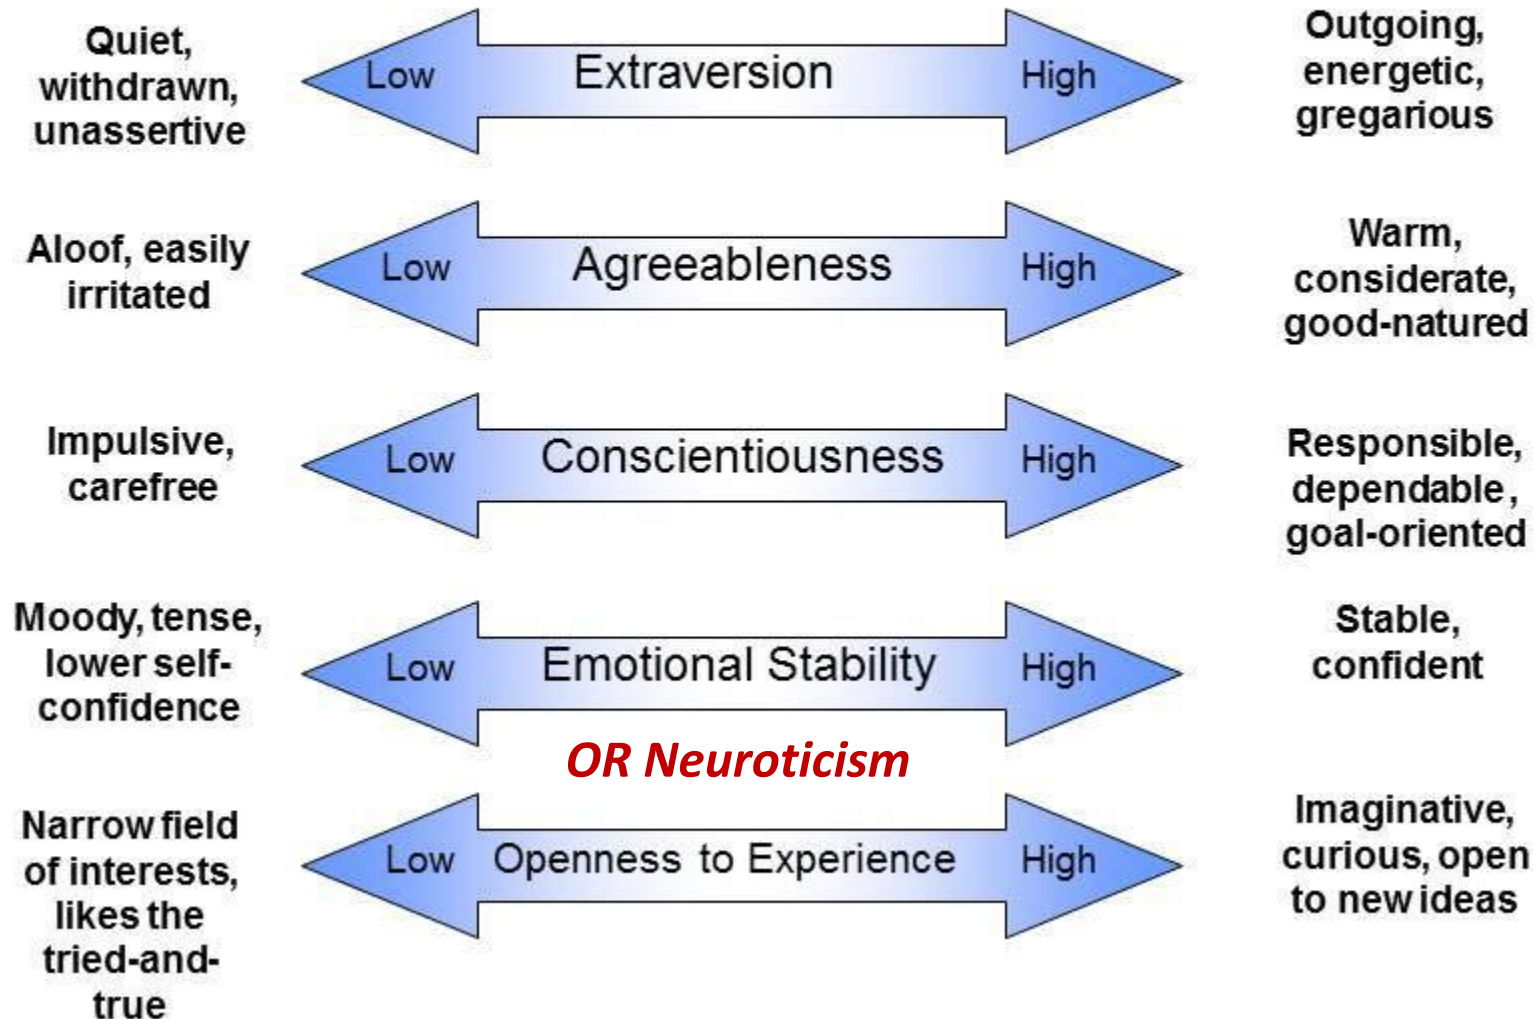

- Ego can manifest as confidence, while hubris is an extreme, excessive form of confidence that borders on arrogance.
- Ego can be a source of self-esteem and motivation.

Hubris is often linked to a lack of self-awareness and a failure to acknowledge one's limitations.

Ego in proper measure can be a positive force, driving individuals towards goals, while hubris often leads to negative consequences and a downfall.

The Big Five Personality Dimensions

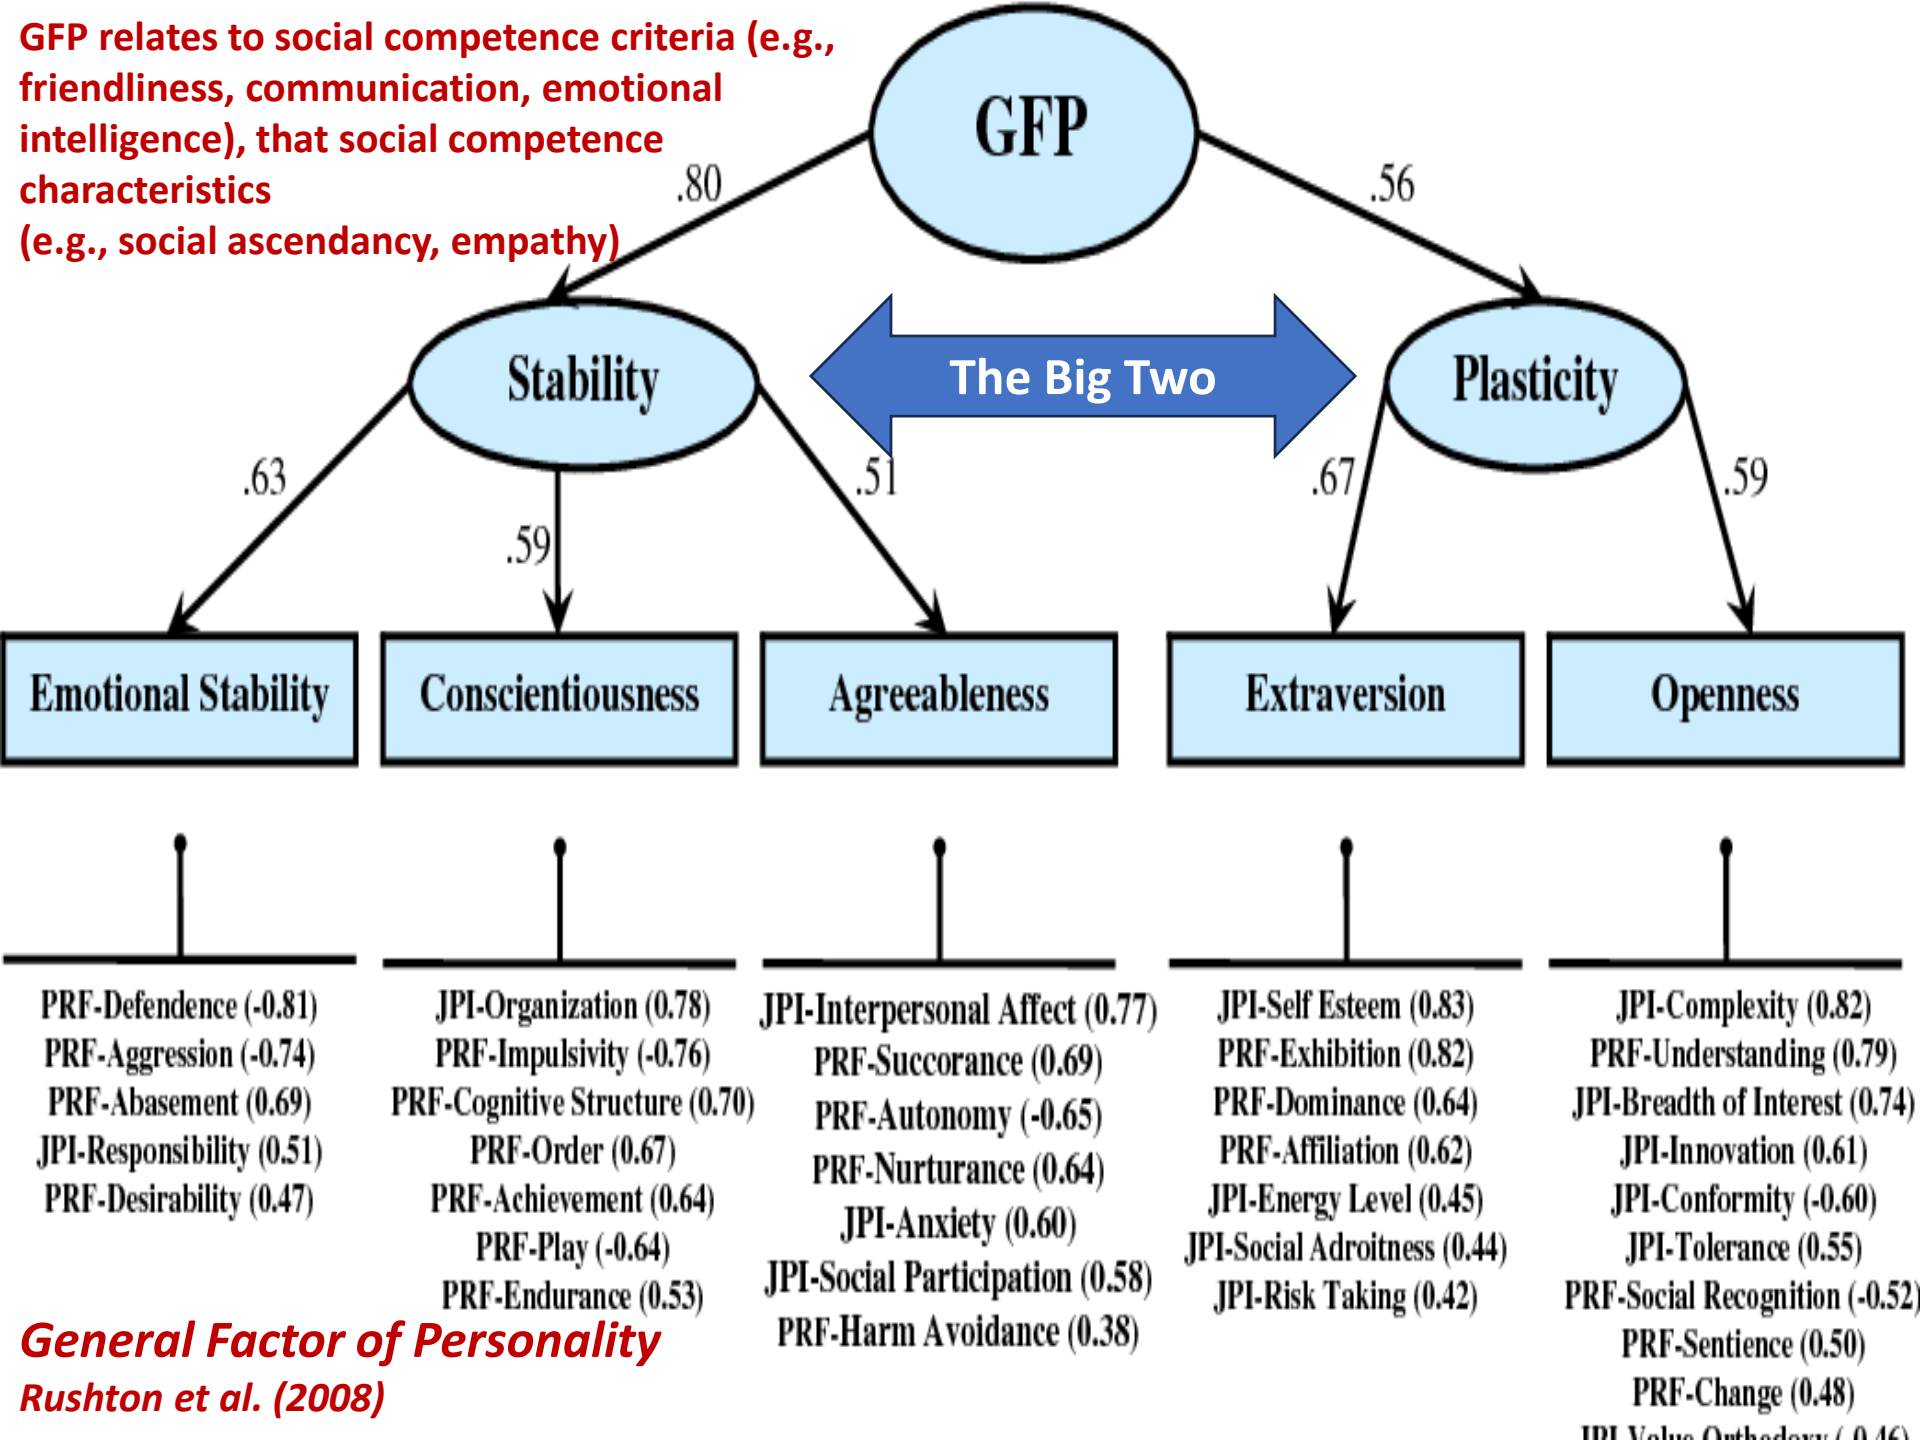

The most basic difference between traits and values is that traits are descriptive variables whereas values are motivational variables

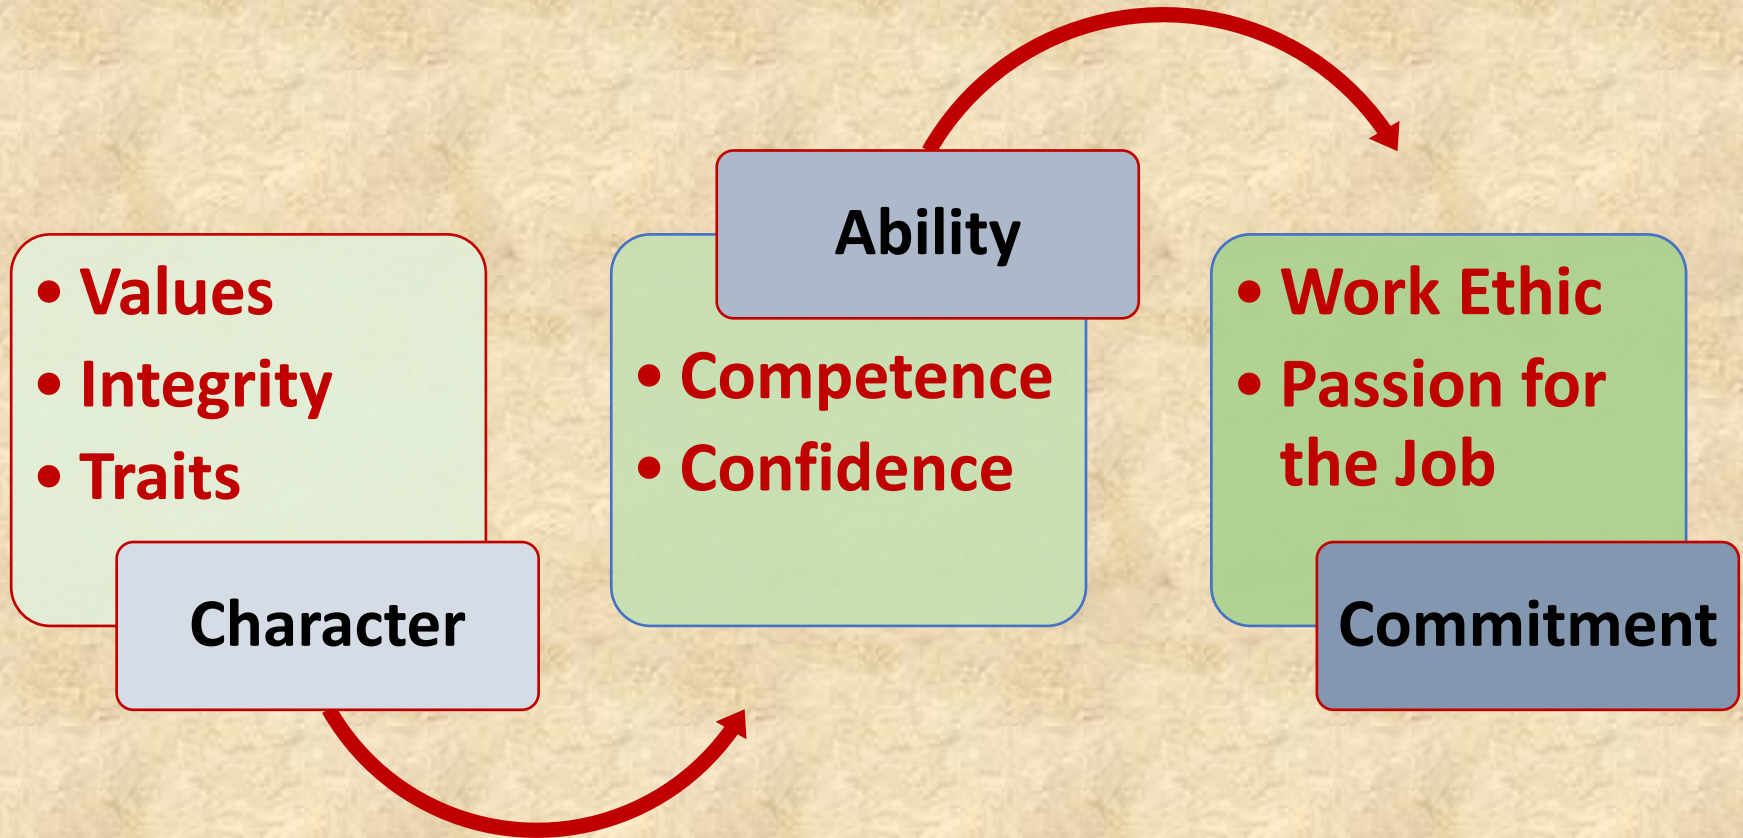

Dispositional traits will not predict how someone will be under different context

(Tupes & Christal, 1961, as cited by Daft, 2007)

GFP relates to social competence criteria (e.g., friendliness, communication, emotional intelligence), that social competence characteristics (e.g., social ascendancy, empathy)

The three (3) big requirements for a leader to shape culture

A shortfall in one of the pillars of good leadership — **competencies, character and commitment** — will undermine the other pillars and, ultimately, lead to performance problems for leaders, their organizations and related stakeholders

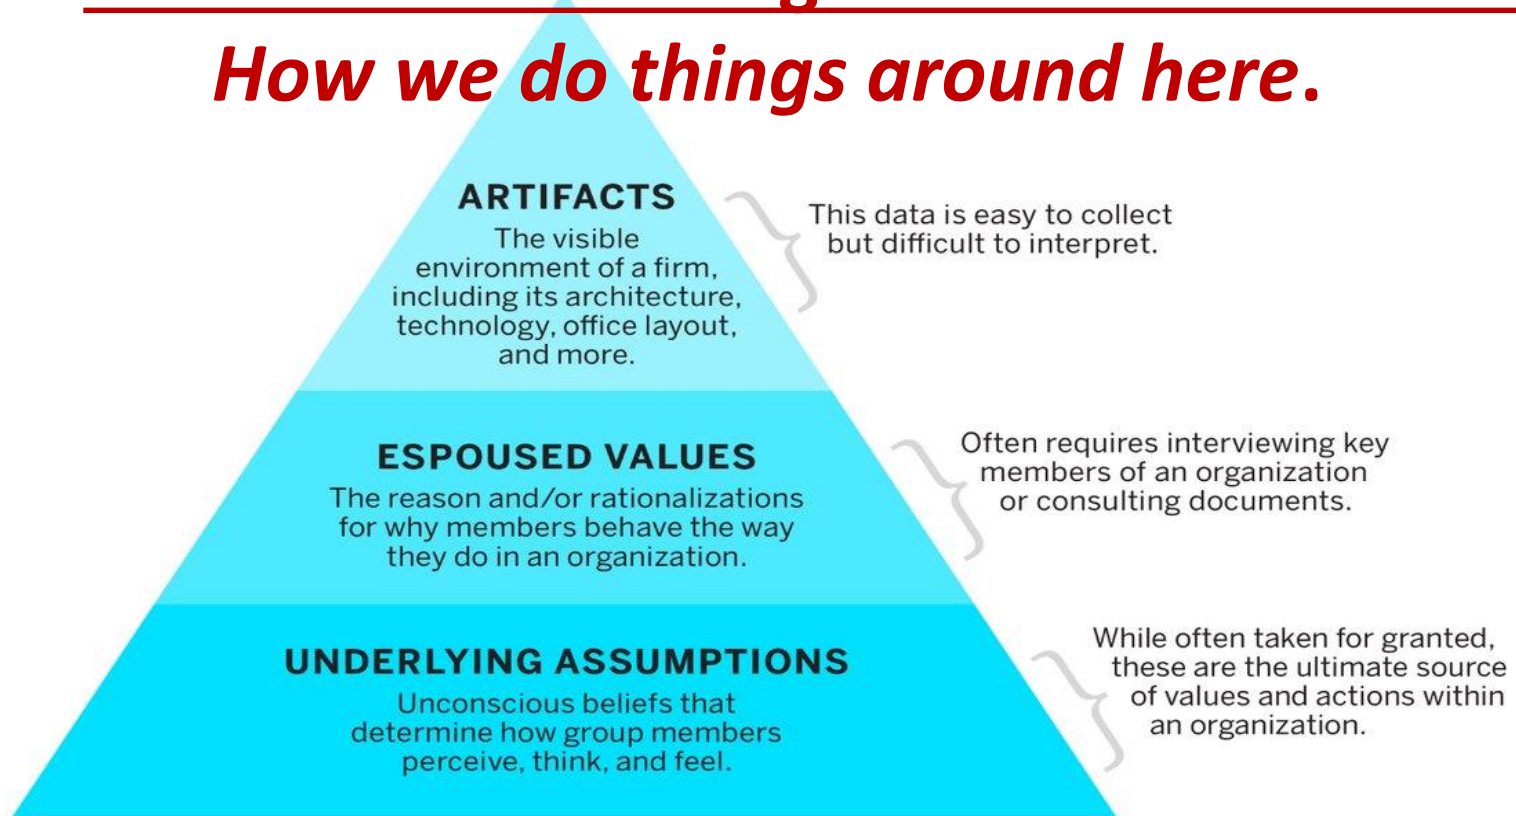

Culture Components

D.D. Warrick (2017)

- Modeling by the leader (integrity and work ethic)
- How time and resources are managed
- The way that Language, conversation and feedback are used
- Interactions and relationships
- The standards and expectations communicated, and the oversight applied
- The opportunities created (growth and development)
- The structures, systems, processes, roles and routines put into place
- The environment created and experienced

Edgar Schein's Organizational Culture Model

KEY: Is Our Standards Aligned with Our Behavior
How we do things around here.

Source: MIT Sloan School of Management

Source: "Take a Skills-Based Approach to Culture Change"
By Per Hugander, *MIT Sloan Management Review*, May 2023
sloanreview.mit.edu/x/64447

Leadership and Management must have a “Zero-tolerance” for misconduct and unprofessional behavior

Managers, Supervisors, and Officers remain aware,
responsible, and held accountable to stay above the
RED LINE

A Leaders's Desire and Passion

- The starting point in all achievement is desire
- The genesis of commitment is desire
- Motivation is the reason or drive behind an action, while commitment is the decision to follow through, even when motivation fluctuates
- Passion is a deep-seated interest or enthusiasm that drives leaders towards their goals and sustain their efforts, especially when facing challenges.
- Passion develops and grows energy

Dreams are free, the journey cost

Virtues and values are related concepts, but they have distinct meanings

- **Virtues:** are moral qualities or traits that are considered good and desirable in a person.

They represent the ideal characteristics that individuals should strive to embody

- **Values:** are the principles or standards that individuals and societies prioritize and hold important.

They reflect what is considered worthwhile or meaningful

Values are:

Fischer, R. & Boer, D. (2016)

- Concepts or beliefs
- Are about desirable end states of behavior
- Guide selection or evaluation of behavior or events
- Are ordered by relative importance
- ✓ Values are motivational goals abstract and context-independent beliefs about desirable modes of conduct or desirable end states
- ✓ Values are internally structured into a coherent system that helps individuals to navigate their social and natural environment

Context matters and that cultural, social, ecological and economic variables interact in complex ways with values

10 Core Values that Influence our Behavior

J. Koehler, (2023)

- Integrity
- Empathy
- Resilience
- Authenticity
- Gratitude
- Open-mindedness
- Responsibility
- Compassion
- Fairness
- Lifelong Learning

“Our Classical and Biblical Origins”

- **Human limitations and the finite condition** (*the fallibility of the human condition*)
- **Ideals and Identity go hand in hand** (*What we are and who we are*)
- **Character, integrity, and honor matter (respectful behavior)**
- **We mature by hardships over time**
 - We embrace continuity, tradition, and memory
 - The past is our friend, it is reliable (We know it)
 - The future can't be trusted. It remains uncertain. (We don't know it)

The Four Cardinal Virtues

Plato, the Republic: Book IV, 426-435

- **Prudence:** (sometimes called practical wisdom), the ability to navigate complex situations in the best way possible.
- **Justice:** understood as acting fairly toward others and respecting them as human beings.
- **Fortitude:** (or courage), encompassing endurance and the ability to confront our fears.
- **Temperance:** the ability to practice self-restraint and to act in right measure.

Supported by Leadership Research

Moral Courage

- **Moral courage:** is “the behavioral expression of authenticity in the face of the discomfort of dissension, disapproval, or rejection” (Lopez et al., 2010, p. 23).
- It requires “the willingness to speak up or take action...for oneself as well as for others” (Bronstein, Fox, Kamon, & Knolls, 2007, p. 661).
- Moral courage “compels or allows an individual to do what he or she believes is right, despite fear of social or economic consequences” (Peterson & Seligman, 2004, p. 216).

It contributes to consistency between moral intentions and behavior

Four categories of morally courageous acts:

Witt, N., & Tanner, C. (2025)

- Challenging misconduct of others
- Opposing unethical orders [speaking to power]
- Confessing mistakes
- Initiating positive changes

Essential elements of moral courage, reflecting both reactive and proactive behaviors

When leaders act with integrity

Abdulai, A. M., Iddrisu, O. A., Osman, A., & Iddrisu, A. B. (2025)

- Serves as a beacon of trust and credibility for followers.
- Demonstrates consistency between words and actions that inspire confidence and loyalty among their teams.
- Create behaviors for others to follow, fostering a culture of honesty, transparency, and accountability within the organization.

- Honesty and integrity are fundamental values that constitute the ethical foundation of leadership.
- The multifaceted roles these virtues play in fostering trust, forming moral decisions, and influencing organizational behavior.

These two virtues are indeed essential to leadership, not merely in the personal realm but also in the broader group level

Aditama, M. N., Purbasari, R., Raharja, S. U. J., & Muhyi, H. A. (2025).

Three requisite steps for the exercise of integrity:

Carter, S. (1996)

- Discerning what is right and what is wrong
 - Acting on what you have discerned, even at personal cost (i.e., *Speaking to power*)
 - Saying openly that you are acting on your understanding of right and wrong.
- *The first criterion captures the idea of integrity as requiring a degree of moral reflectiveness.*
 - *The second brings in the ideal of an integral person as steadfast, which includes the sense of keeping commitments.*
 - *The third reminds us that a person of integrity is unashamed of doing the right*

Followers' moral judgments and leaders' integrity-based transgressions: A synthesis of literatures

Krylova, Jolly, & Phillips, (2017)

Behavioral integrity defines an individual's trustworthiness through the extent to which promises are kept.

- It represents whether target persons do what they promise, and whether those persons adhere to their espoused values.
- More precisely, a leader's behavioral integrity is “the perceived pattern of alignment between the leader's words and deeds” (Simons, 2002).

Moral Integrity does, indeed, preclude immoral or amoral ideals and values.

- It is judged on the basis of one's beliefs about the purity of the agent's motivation.
- Word and action alignments are still important, but moral integrity also considers whether an actor's values and moral principles are congruent with the values and principles of the observer in question

Remember: In leadership off the record is NEVER off the record

- The central idea—*that if we know who to be, then what to do falls into place*

Cunliffe, (2008)

- Forms a basis for discussion about how we understand our world, how to be in the world, how we bring who we are to what we do, and how we can act in ethical ways

Ethical and moral action are embedded in a relational understanding and enacted through self- and critical-reflexivity

Reflective and Reflexivity in our Thought Process

- **Reflective:** the process of thinking deeply about something, considering one's own thoughts, feelings, and experiences.
- Reflective thinking involves introspection and the ability to analyze and evaluate one's own beliefs and actions.

- **Reflexivity:** refers to the capacity of individuals to recognize and analyze how their own perspectives, biases, and actions can influence the context or issues

- There is an acknowledgment of the relationship between the observer and the observed, emphasizing how personal experiences and social locations affect interpretation and understanding

Reflective thinking is about personal introspection, while reflexivity involves a critical awareness of how one's own influence can shape social interactions.

Paul's Explanation of Christian Love Provides a Blueprint Corroborated by Science

1 Corinthians 13.

- **Patient:** not quick-tempered, irritable, or resentful
- **Kind:** selfless and involves truth-telling, fortitude, constancy, and tolerance
- **Non-envious:** does not envy, boast, or brag
- **Non-arrogant:** is not pompous or inflated
- **Non-self-seeking:** does not seek its own interests
- **Non-revengeful:** does not brood over injury or rejoice over wrongdoing
- **Truth-loving:** rejoices with the truth
- **Forgiving:** bears, believes, hopes, and endures all things

Virtuous leadership and employees' attitudes and work behaviors.

Ribeiro, N., Duarte, A. P., & Gomes, D. C. (2025).

- Perception of virtuous leadership significantly is correlated with their levels of affective commitment, turnover intention, and individual performance.
- Affective commitment is linked to turnover intention and individual performance
- The relationship between virtuous leadership and turnover intention is partially mediated by affective commitment.

- The relationship between workers' perception of virtuous leadership and their individual performance is fully mediated by affective commitment.
- The findings suggest that virtuous leaders can generate an emotionally committed workforce that is motivated to stay in the same organization and strive to achieve higher levels of individual performance—if supervisors exhibit significant virtues in the workplace.

Virtues and Identity

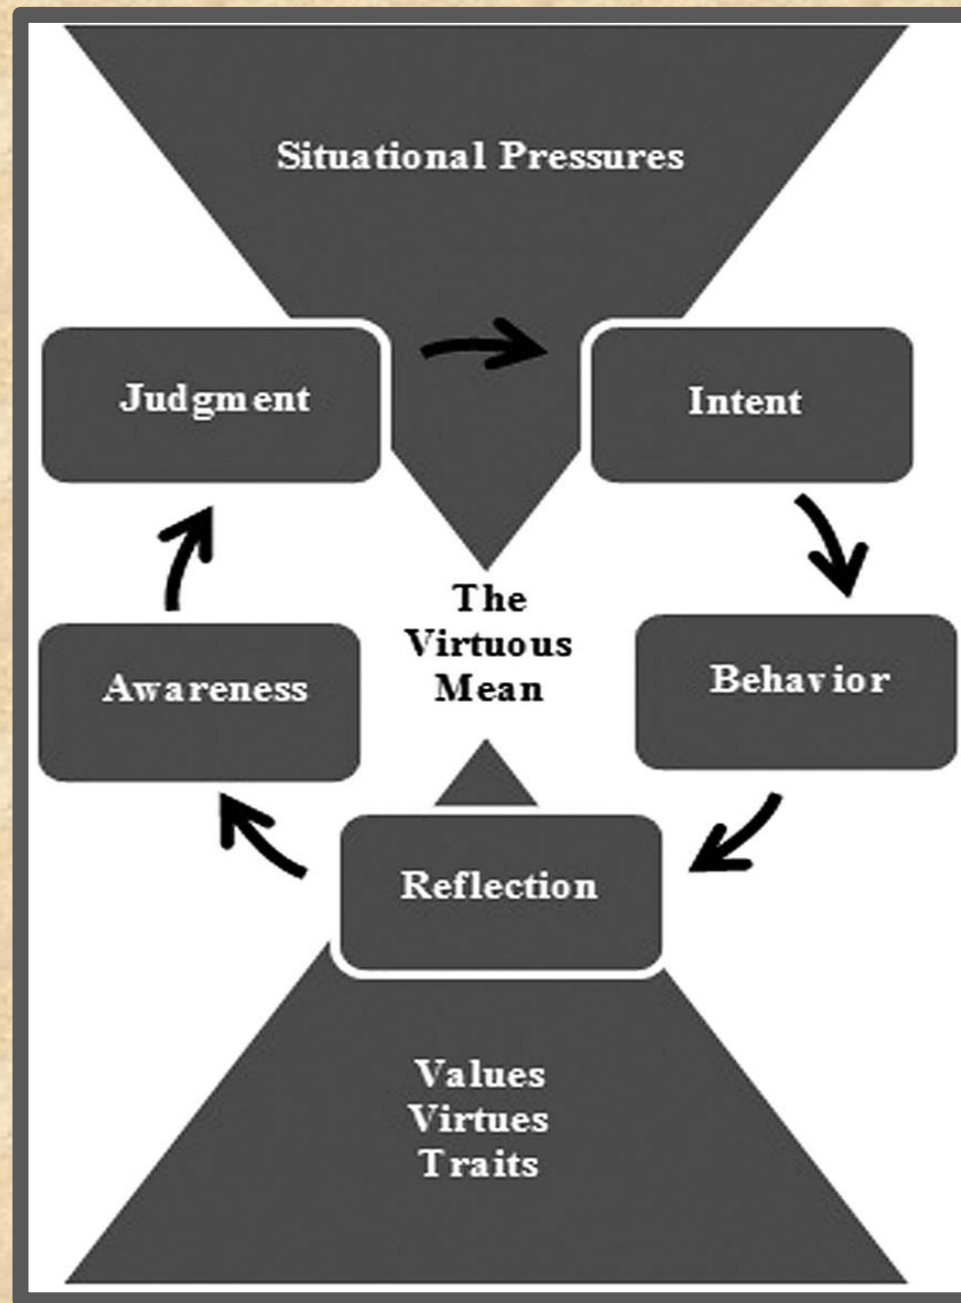

- When you develop, build, and sustain your identity
- You need values, humility, wisdom, competence, confidence, trust, and courage to maintain it
- If you build your identity well, rooted in a virtuous mindset, you will be better able to withstand the temptations from vices, self-serving arrogance, and unethical behaviors

Role modeling sets the highest example

Virtues as a Guide and a Guardrail for Our Practices and Habits

- Human vices, “just happen” we often default to our self-concerns or our rathers
- Virtues make us pause, have “secondary thoughts” regarding “what’s right” and “our self-control”

Crossan, M., Mazutis, D., Seijts, G., & Gandz, J. (2013).

Astute police leadership starts with Moral Courage, Respect, and Relationship

- The ability to 'read' people and situations
- Social network awareness and relational management
- Demonstrate Political savvy over political polarization
(The ability to exhibit confidence and professional diplomacy while embracing neutrality and effectively relating fairness to all employees at all levels internally and externally)
- Understanding priorities, cultural norms, and unwritten rules for success at all levels of the organization
- Objective reflection and skilled navigation through the potential minefield of conflicts and controversy

The basic amenities and performances the leader practices everyday in their comportment is important

Leaders as Role Models

Scarnati, J.T. (2001)

Respect and dignity are central to all moral philosophy; it is of the same importance in manners.

- Successful leaders utilize proper etiquette and manners
- Being mannerly helps the leader to grasp the covert signals within the agency
- Others will reciprocate
- It will keep them upright and on the correct path.

No matter who you are, there is never an excuse for poor manners.

Why, how, and when incivility unfolds in the workplace: a 24-year systematic literature review.

Yaqoob, S., Shahzad, K., Faisal, M., Kitchlew, N., & Abualigah, A. (2025)

- Foster a culture that promotes employee well-being, positive working relationships, and a sense of camaraderie among employees.
- Identify and address organizational stressors that may contribute to incivility.
- Promote awareness and understanding.

Foster the necessary skills to actively contribute to cultures of civility and respect.

Humanity has no fixed state of nature but rather is a story of developing historic communities in which we acquire the practices that perfect us as social creatures

- *Often, In the direct approach of power, manners are seen as foolish or manipulative.*
- The rituals of manners are cognitive, making us capable of something better than the stupidity of an appetite for power or a merely economic driven life.
- **Virtue centered.**

The wisdom of Philippians 2:6... “Who, being in very nature of God, did not consider equality with God something to be used to his own advantage.”

Manners

- Manners are represented by our comportment (*personal bearing or conduct; demeanor; behavior*) in the public and private worlds we navigate
- Understanding “the veil” between “private” and “public” worlds.
- Manners are grounded in vision (*you must learn to see right*)
- Manners are rituals or liturgies (*the way we look at things and the proper codes of conduct*)
- Manners are small moments of "honoring's"
- Manners promote honoring's for a person's value and civility in our behaviors

“Coming to the aid or welcome of another unasked.”

--- Dante

Manners are about “RESPECT”

- Mutual recognition respect is an important form of respect in workplace relationships that can bring benefits to both the individual and the organization. Clarke, N., & Mahadi, N. (2017)

- Respect based on mutual recognition is an important component of respect in the relationships that exist in the workplace, and it can provide advantages to both the individual and the organization. Maaz Ali, M., & Siddiqui, D. A. (2024)

Civility

- The idea of civility a concern for making aspects of our social-political lives easier to navigate.
- ‘Harmony’ goes further than this by being not just a model for how we can survive our social relations with others but for prescribing a way to repair them.
- In that sense, we might call it a reparative form of civility.

The accommodation of others profoundly changes the way we interact with disagreeing others

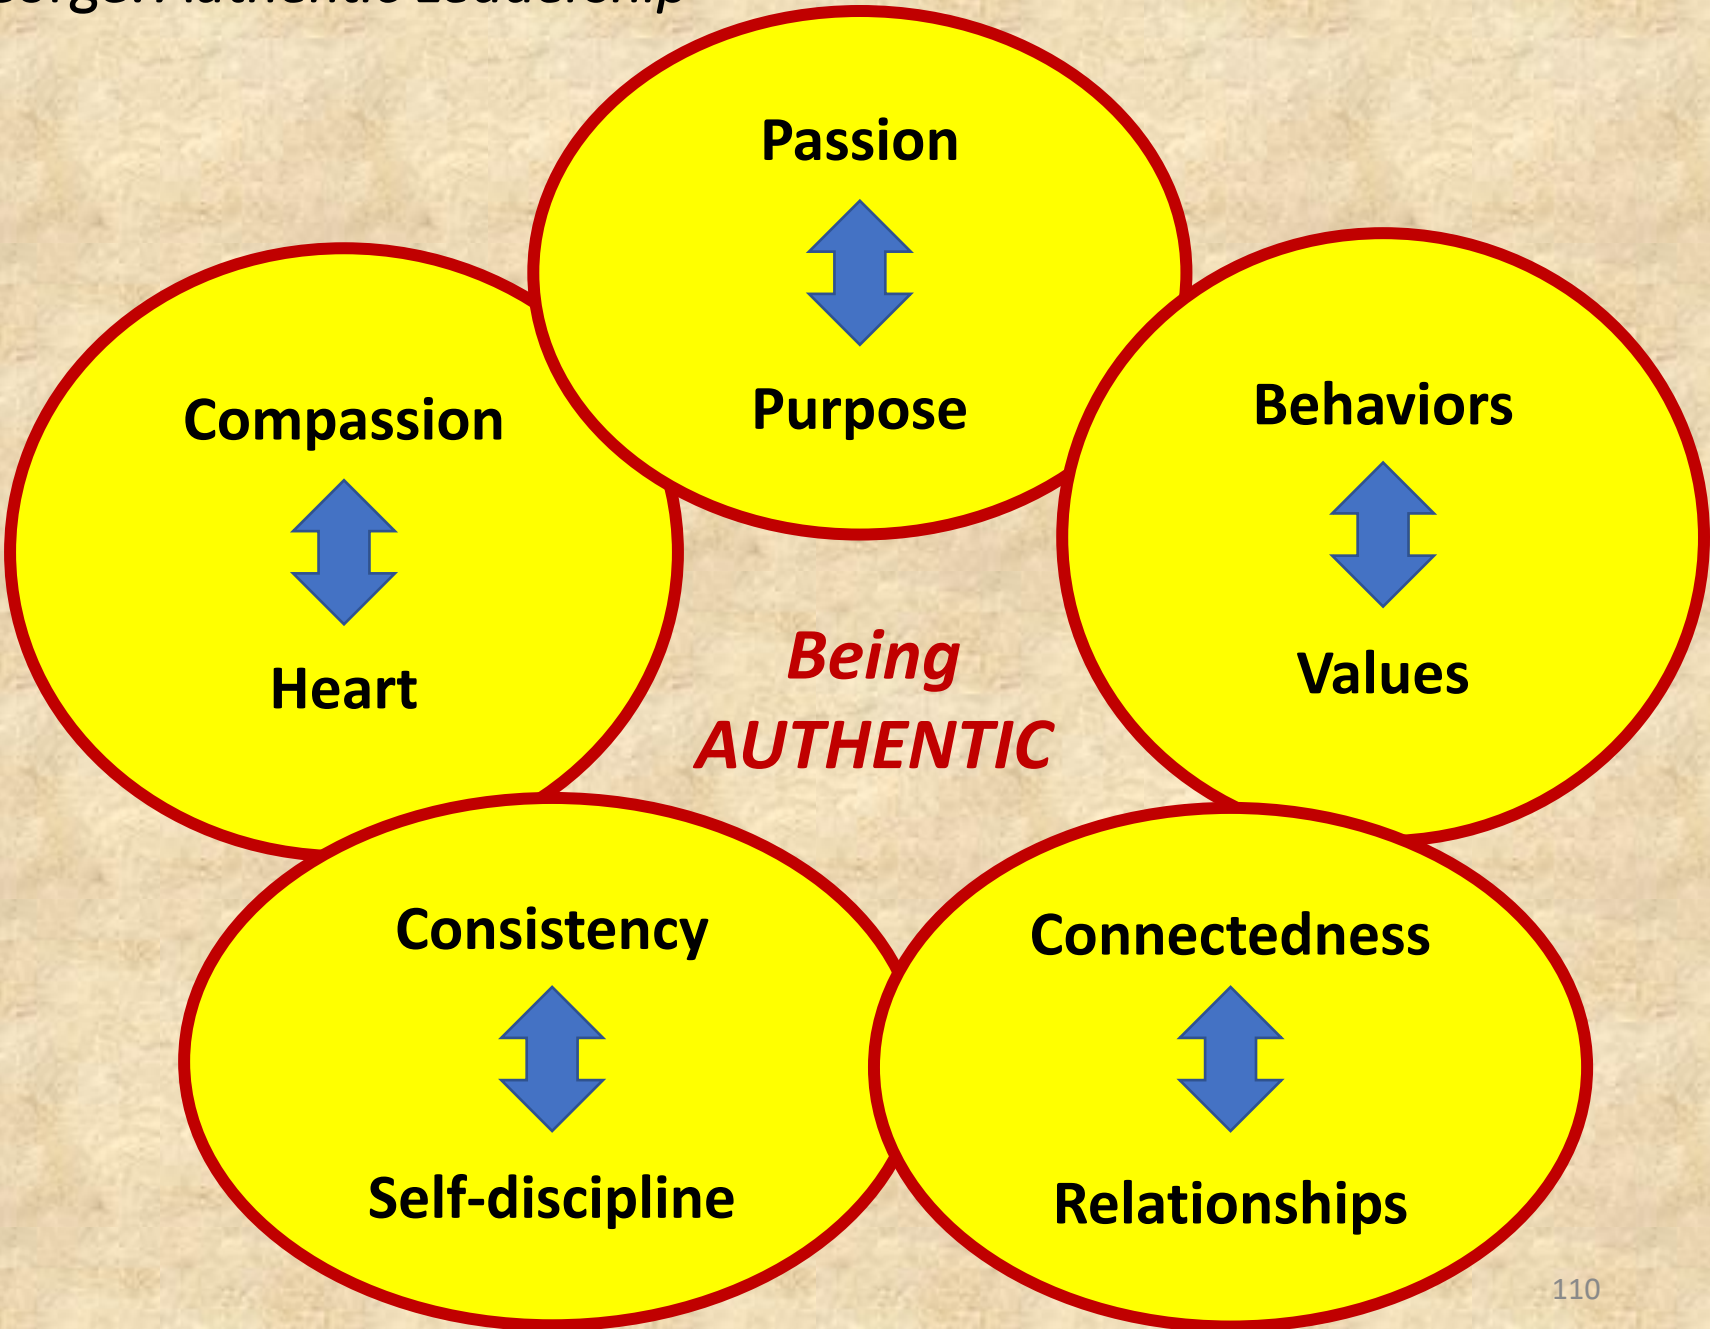

Tolerating those with whom we disagree is a mark of the virtue that philosophers and non-philosophers alike refer to as civility.

- Civility is the distinctive virtue of communicating respect for our fellow citizens.
- True civility on this view consists not just in being respectful or considerate.
- It requires us to engage in social practices and behaviors that display respectfulness

van Oosterum, K. (2025)

“The best criticism of the bad is the practice of the better.”

--- Richard Rohr

- The three dominant moral approaches (i.e., ethical, authentic, and servant leadership) clearly indicates that moral leadership behaviors positively impact a host of desirable organizationally relevant outcomes.

Lemoine, G. J., Hartnell, C. A., & Leroy, H. (2019)

- **Ethical leadership:** Has connections to moral philosophy (values, virtue, and ethical behaviors)
- **Authentic leadership:** A behavioral pattern that includes self-awareness, models a clarity of values, and an internalized moral perspective that is sincere
- **Servant leadership:** Serving others above self, which leads to benefits for both the leader and their employees

In Leadership Balance is the key
Often, complex, complicated, contextual, and nuanced

Standards define what is expected, while performance reflects how well those expectations are met.

A Balanced Perspective

Fallibility should not be ignored by management and leadership

Hay, A. (2023)

- Leadership is a “Practice” (like medicine and law)
- All subordinates are different (talents, skills, gifts)
- Understanding fallibility fosters a culture of continuous learning, resilience and adaptability
- Such ultimately leads to improved decision-making and reduced errors
- By shifting from an unrealistic pursuit of perfection to a more realistic and inclusive approach, organizations can enhance employee engagement, innovation and overall performance

[Realistic expectations, with the motivation to exceed those expectations]

When failure is beside success it breeds humility

Errors and Violations

Keys

- Humble understanding
- Knowing that maturity is a process of growth
- The importance of time and mentorship are critical elements in that process
- **We all strive on different journeys to the same destination with different stages of capability and effectiveness**
 - Confidence and effort
 - Insight and discipline
 - Practice and learning

Understanding that learning is the fruit of failure

Perfection is an Illusion, Grace is a Mediator

- **Perfection:** thrives on failure, fear, and judgement
 - Perfection keeps score and does not tolerate mistakes
- **Grace** doesn't keep score it focuses on help, support, forgiveness, and acceptance when we fail or fall
 - Grace sees the value of learning from our mistakes
 - Grace focuses on the journey over the destination and the process over the result
 - Grace builds connection where perfection builds walls

However: grace doesn't mean abandoning our standards of performance or embracing mediocrity

Hold Subordinates Accountable to Agency Standards, Conduct, and Performance

- Ensure subordinates know the “Standard”
- **Ensure they have the training, skills, and abilities (capabilities) to accomplish the task assigned or encountered**
- Ensure subordinates understand their roles and responsibilities
- Provide them clear unambiguous expectations (up-front)
- Ensure they understand the consequences
- Ensure Objective and Accurate Evaluations on progress (Oversight)
- Provide “specific” and “clear” Feedback (describe don’t judge)
- Hold them accountable to the standard

Expectations are Key

- It is critical that a Leaders' task expectations regarding an employee follow a process:
 - Educate on the standard
 - Explanation of the specific (unambiguous) expectations
 - Define purpose
 - Oversight strategies that increase the likelihood of these expectations being fulfilled
 - Sustain feedback loops for proactive awareness and correction

Hold everyone (included you) accountable to the standards

MANAGING UP

- Influence those above you
- Know your managers goals and priorities
- Walk their walk, talk their talk
- Know how they communicate to those above them
- Adjust your communication style, tone, and format
- Keep them in the know
- Maintain good relations

MANAGING DOWN

- Maintain a healthy flow of communication
- Listen to learn & teach
- Strive to nfluence subordinates
- Always be straightforward, specific, consistent
- Give thanks and celebrate
- Maintain good relations

MANAGING SIDWAYS

- Align with your manager
- Influence your peers
- Maintain good realtions wih peer groups
- Stand by decissions and own the outcomes

At whatever level you function as a leader, your ultimate ability to succeed will in large part depend on the support you receive from your superiors...You must “lead up”

Leading up: is about loyalty, dedication, and work ethic; putting the organization ahead of yourself.

Sucking up: is about doing what you can, when you can to put yourself ahead of everything; and to create an opportunity to “short cut” or obtain your ambitious goals “free.”

From John Maxwell's 360-degree leader

Leading up greatly assists you in leading your subordinates

- 1) Your reputation in the agency
- 2) Your credibility with the bosses
- 3) Your strength in issues
- 4) Your ability to help them
- 5) Your ability to obtain resources
- 6) Ability to make change
- 7) They inherit your influence and power.

Principles

Lead yourself exceptionally well.

- Manage your emotions
 - Manage your time
- Manage your priorities
 - Manage your energy
 - Manage your thinking
 - Manage your words
- Manage your personal life

Other Principles

- Lighten Your Leader's Load
- Be willing to do what others won't
- Be Loyal
- Be prepared every time you take your leader's time
- Become a go-to player
- Be better tomorrow than you are today

Know when to push and when to back off.

When to push

- Do you know something your boss doesn't, but needs to?
- Is time running out?
- Are your responsibilities at risk?
- Can you help your boss win?

When to back off

- Are you promoting your own personal agenda?
- Have you already made your point?
- Must everyone but you take the risk?
- Does the atmosphere say "no?"
- Is the timing right only for you?
- Does your request exceed your relationship?

Other Important Principles in leading up

From Vernon Keenan, Retired Director, and 40-year career with GBI

- **Finalize projects you are responsible for managing.**
(The boss should never have concerns about a projects status or completion) and provide regular updates
- **Provide executive briefings or summaries**
 - ✓ **Define issues and outline problems**
 - ✓ **Be objective, specific and concise**
 - ✓ **Provide viable options and realistic solutions**

- Concentrate your efforts in areas you can influence
- Do not waste time or foster discourse in matters that you have no control
- Do not argue after the final decision is made, understand the importance of being committed to the execution and implementation of the decision
- Understand the final decision may not be final (unanticipated influences, the discovery of new information may come into play)
- Understand “most” every boss has a boss
- A global (Agency Team) perspective of war and theater of battle over just a battlefield mindset (*strategy and Stakeholders*)
- When asked provide truthful input
- Never compromise your personal integrity

THE WE

Three (3) Critical Elements in Effective Leadership

These elements work together to create an environment where effective leadership can thrive, leading to better team performance and satisfaction.

- **Identity:** *Leaders should foster a strong sense of shared identity by creating a cohesive group where individuals feel they belong and are part of a common purpose toward a vision that resonates with the values and goals essential for building this identity.*
- **Trust:** is built through transparency, consistency, and integrity.
- **Collaboration:** Effective leadership is characterized by collaboration rather than authoritarian control fostering an atmosphere of open communication and collaboration.

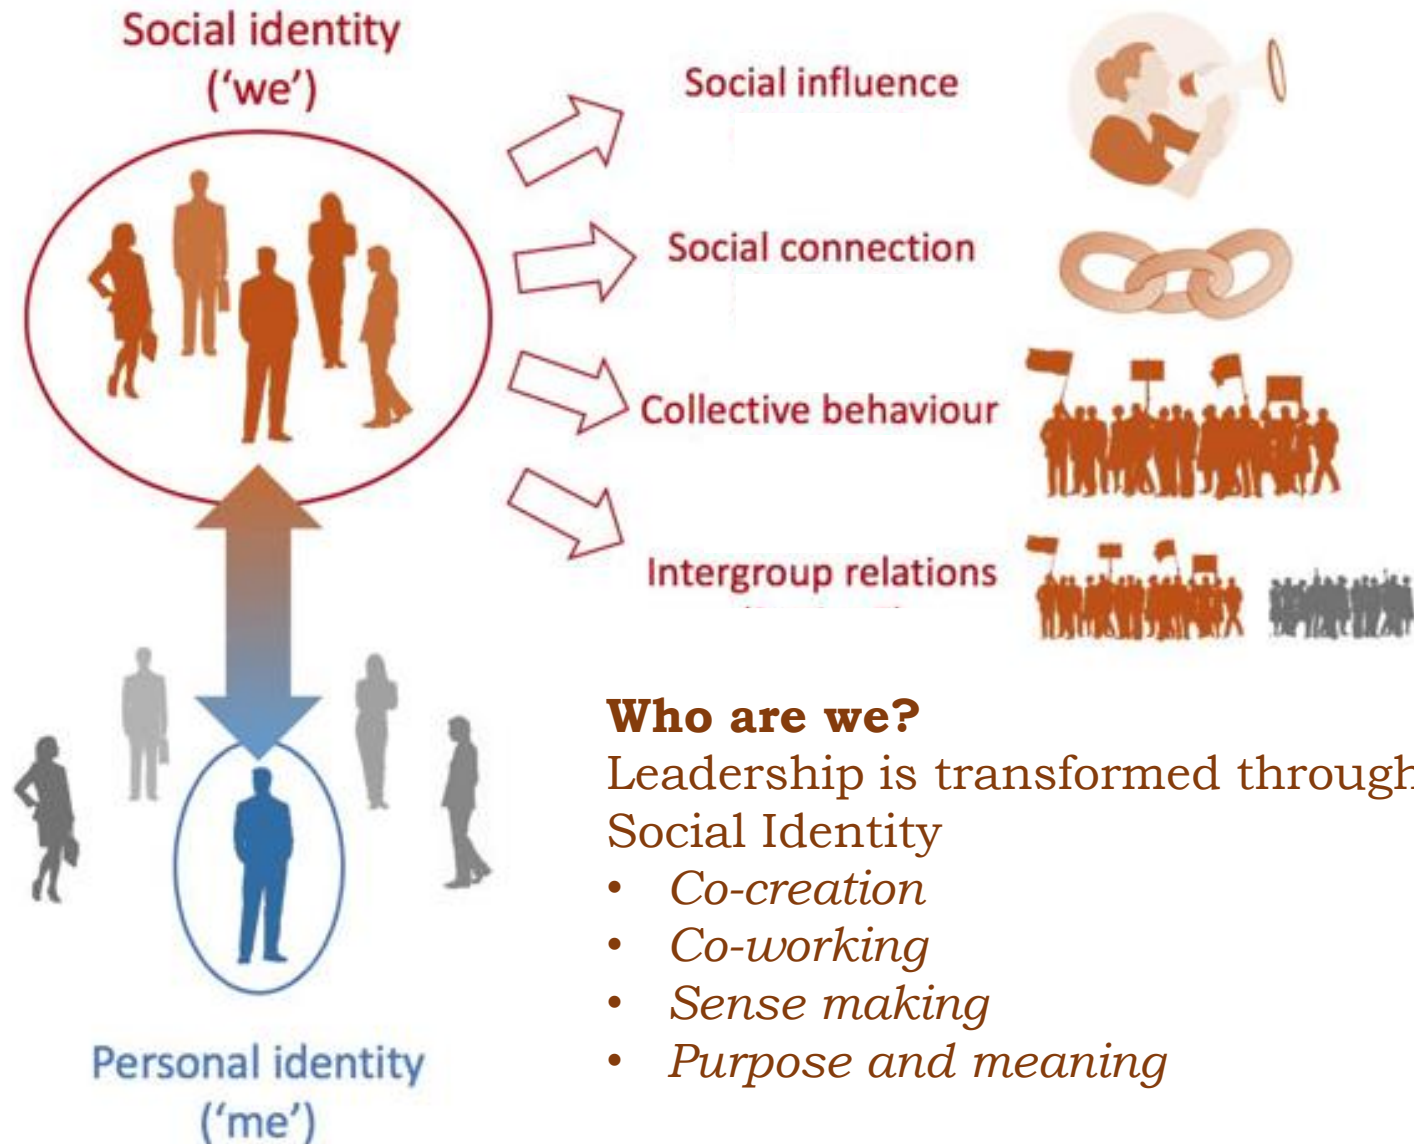

Identity (Me)

- Our individual identity refers to how we think about ourselves, who we are and what we stand for (Self-esteem, values etc.)
- This process of gaining an identity is largely done referentially within our social context
- We tend to define ourselves by our similarities and differences to others we meet or know of

Social Identity (We)

- Refers to the process of how we define who we are by reference to the social groups we align with or are members of
- Examples are organizations, group memberships, family groups, social and political allegiance, etc.
- These group memberships tend to be ingrained with values, emotional responses and patterns of cognition (thinking and problem solving) and behavior

- Are derived from the group memberships we belong to, whether the team, the organizations, we have so many different groups we belong to and once they become important to us, they become an important part of who we are
- They give us a sense of belonging, meaning, give us direction, and so these groups our source for social support and so on

- A strong sense of shared identity, a strong sense of awareness, and identity alignment is crucial to leadership
- Values, norms, beliefs, and goals are critical to the individual and effective group work
- It is also important to mental health and is the very essence of what leadership is about
- **Leadership is about building those things and helping people**
- At various junctures to reestablish identity, strength, and clarity of content and alignment

Like a car, you know, they're always in need of servicing and if you don't attend to them as a leader then the wheels will come off

Haslam, A. (2023)

Important Leadership Perspective

Not Just Inputs (*From the leader*)

They are Outputs (*From the followers*)

■ *Leading teams is about groups and how those groups*

○ Feel

○ Think

○ Behave

■ How we shape attitude and thought through transitions at the group level

■ Leaders and Leadership are transformed by the group

■ Central to leadership is building strengths, alignments and balance, with clarity of concepts

The sense of belonging, meaning, that give us direction

- Ways in which the resulting self understandings then affect their cognitions
- The way they think, the way they see the world, the way they feel, and most critically the way they behave, discover, find, and show group memberships
- Our social identities guide us they shape how we feel and think and behave

Mühlemann, N. (2023)

About belonging and identity in the police

Filstad, (2022)

- Belonging is relational, cultural, material and embedded in collective engagement, and is about being equals where everyone contributes
- Engagement creates a strong emotional attachment to an idea of 'us' and of being part of something bigger than oneself
- Belonging represents imaginations of the police mission and being proud to be part of that

Research (2022 and 2023) looking at inclusive leadership has found that:

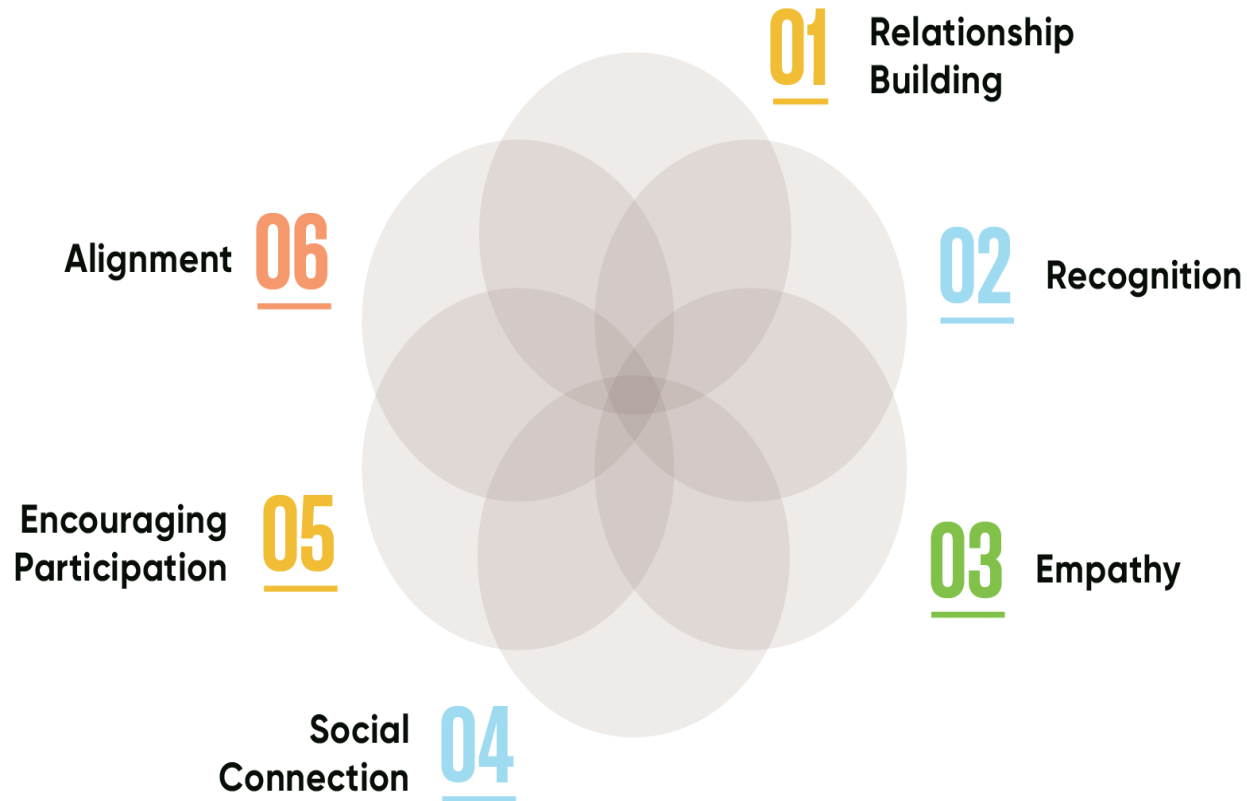

■ Inclusive leadership is based on four primary behaviors:

- Recognizing, using and observing the uniqueness of employees
- Increasing a sense of belonging of all employees
- Expressing gratitude and acknowledging the contribution and effort of employees
- Helping the organization to become more inclusive/ promoting inclusiveness

There are a wide range of outcomes, including positive outcomes, that occur because of inclusive leadership.

Profile of an inclusive leader

Inclusive dimensions

Employee Work Passion

Fowler, S. (2014)

- Performs above standard expectations
- Uses discretionary effort on behalf of the organization
- Endorses the organization and its leadership to others outside the organization
- Uses altruistic citizenship behaviors toward all stakeholders
- Stays with the organization

The question is not if a person is motivated but why?

Four narratives that encapsulate motivators:

Lechler, R. C., & Huemann, M. (2024)

- Creating and delivering
- Learning and developing
- Relating and connecting
- Working autonomously
- These narratives shed light on motivators that drive young professionals to work

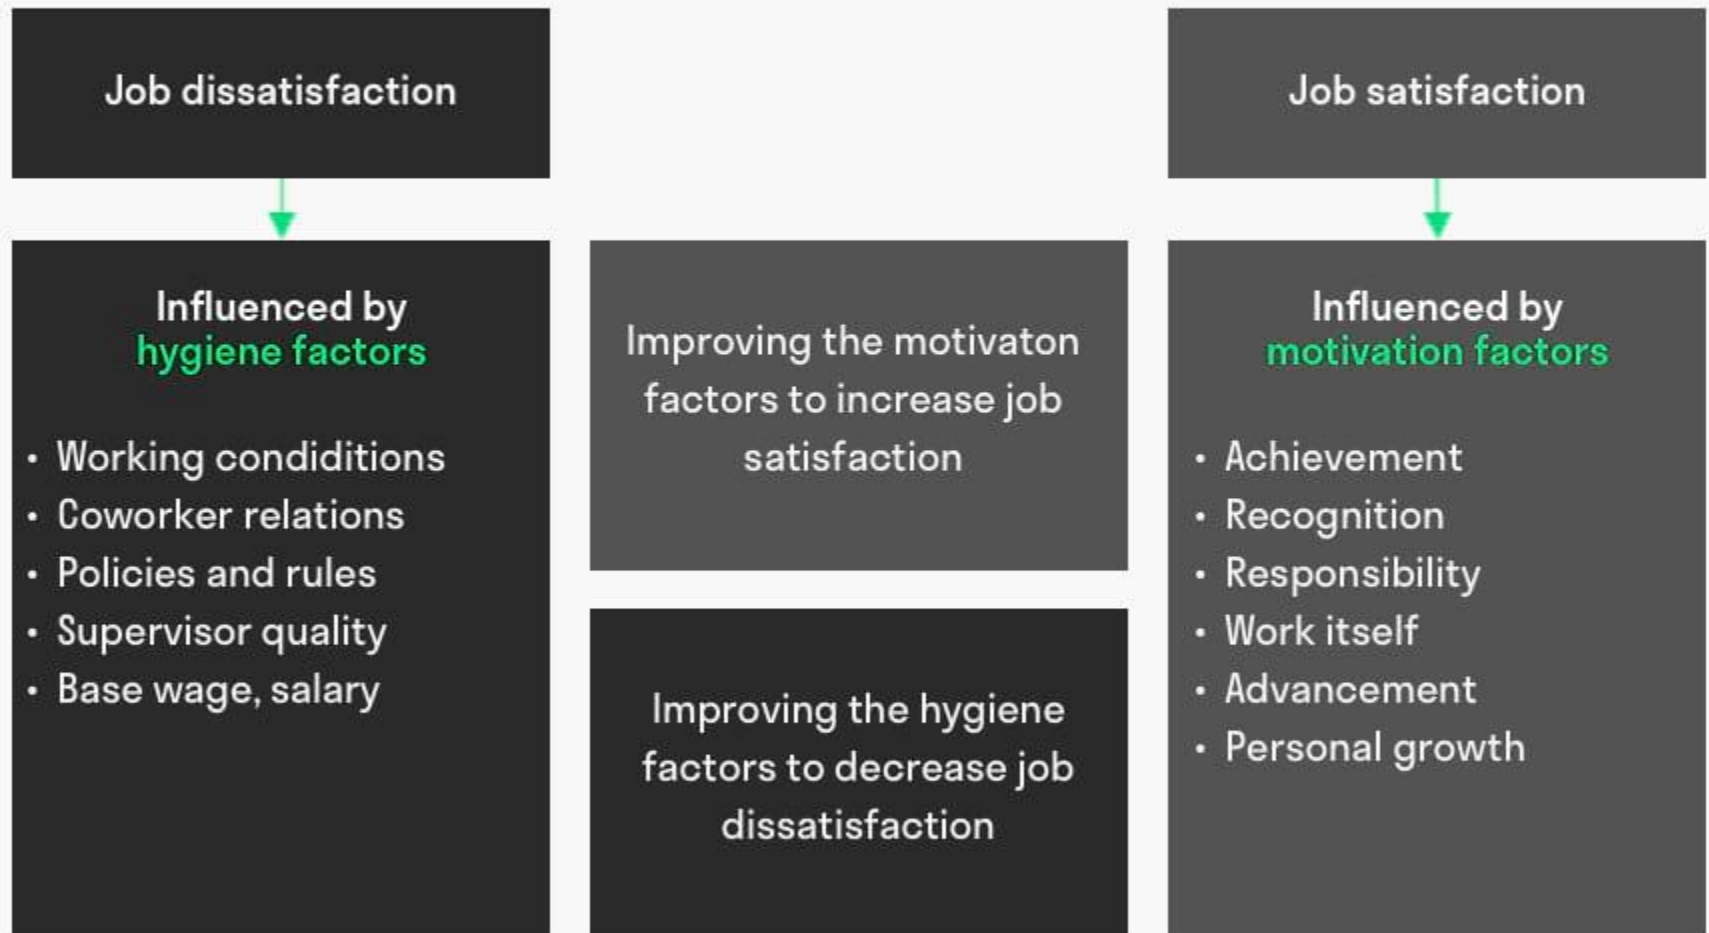

We then related these motivators to Self Determination Theory, aligning them with the needs for autonomy, competence, relatedness, and added the need for purpose

Maslow's Needs at Work

Two Factor Theory by Frederick Herzberg

toolshero

self-determination theory

HUMAN BEINGS HAVE THREE BASIC NEEDS:

COMPETENCE

People need to gain mastery and control of their own lives & their environment.
Essential to wellness.

AUTONOMY

People need to feel in control of their own life, behaviours and goals. This is about choice.

RELATEDNESS

People need to experience a sense of belonging and connection with other people.
*Feeling cared for by others
& to care for others.*

Based on the work of Richard Ryan and Edward Deci.

Leadership “POWER” does not work to Motivate People

Leaders should understand the Self-determination theory (SDT) framework

Motivation is the energy to act

- To nurture people’s optimal motivation through their satisfaction of three basic psychological needs for autonomy, relatedness, and competence

Deci & Ryan, (2000, 2002).

- These psychological needs are foundational for all human beings to thrive and flourish, are empirically validated, universal, and, when satisfied, result in high-quality motivation

Ryan & Deci, (2017).

To Thrive, Create Choice, Connection, and Competence

CHOICE

CONNECTION

COMPETENCE

Fowler's theory states:

Fowler, S. (2023)

- A leader's role is to help individuals uncover why they are motivated
- Explore their current motivational outlooks
- **Facilitate their performance by linking these deep psychological needs to the wider goals of the organization and their personal role in achieving these.**

POWER

- Followers' perceptions of **hard power** use by their leaders (i.e., reward, coercive, and legitimate power) was often related to higher levels of sub-optimal motivation in followers (i.e., amotivation, external regulation, and introjected regulation).
- However, followers who perceived their leaders used **soft power** (i.e., expert, referent, and informational power) often experienced higher levels of optimal motivation (i.e., identified regulation and intrinsic motivation)

The quality of followers' motivational outlooks was also related to intentions to perform favorably for their organizations.

Peyton, T., Zigarmi, D., & Fowler, S. N. (2019)

The six motivational outlooks

Fowler, S, (2023)

Sub-optimal:

- **Disinterested** - We simply do not find value in the project or task, may feel overwhelmed by it or that the task is a waste of our time
- **External** - The project or task may provide us with an opportunity to exert our position or power, or to take advantage of a promise for more money or an enhanced status in the eyes of others
- **Imposed** - Participating in the project or task because we feel pressured to do so due to the assumption that everyone else is participating and expects the same of them. We may also take part to avoid feelings of guilt or shame, or a fear of not participating

- **The Sub-optimal Motivational Outlooks**—Disinterested, External, and Imposed—are considered **the junk food** of motivation because they don't feed an individual's ongoing need for ARC (autonomy, relatedness, competence).

Junk food motivation is enticing and appealing, but often does more harm than good.

- When people act from a sub-optimal motivation, they can rarely sustain their effort over time.
- Research indicates that even if they achieve a goal, they pay a price in terms of physical or mental health and are less likely to engage in the goal or activity in the future.

Optimal:

- **Aligned** - Participating in the project or task because we are able to link it to a significant value such as learning from others or having others learn from us.
- **Integrated** Participating in a project or task because we are able to link our participation to a life or work purpose, such as giving voice to an important issue.
- **Inherent** - Taking part because we simply enjoy the activity and regard it as fun.

- **The Optimal Motivational Outlooks**—Aligned, Integrated, and Inherent— are considered the **health food** of motivation because they nourish an individual's needs for ARC on an ongoing basis
- **The energy and quality of effort derived from an optimal Motivational Outlook is sustainable.**

Fowler, S. (2023)

Don't focus on outcomes

Adapted from Fowler, S. (2018)

Focus on the person:

- Focus on autonomy
- Focus on relatedness
- Focus on competence

Develop your leadership skills to develop them

Leadership Skills regarding Autonomy

- Use noncontrolling language that invites a perception of choice
- Illuminate boundaries, then explore choices within those boundaries
- Collaboratively set goals and help reframe goals as relevant
- Present goals and timelines as valuable information necessary for achieving agreed-upon outcomes
- Provide opportunities to make choices and decisions on their own
- Build confidence through doing

Leadership Skills to Deepen Relatedness

- Demonstrate empathy and caring through listening, acknowledging, and accepting expressions of negative affect
- Offer pure and informational (behavioral) feedback rather than personal or evaluative
- Provide rationale, share information about yourself and the organization, and discuss your intentions openly
- Help individuals align work and tasks with their own developed values and work-related purpose
- Frame actions in terms of the welfare of the whole and focus on contributions to the greater good.
- Provide vision, purpose, and meaning

Leadership Skills to Build Competence

- Emphasize learning goals, not just performance goals
- Provide them in a knowledge rich-environment
- Ask, “What did you learn today?”
- Recognize mistakes as opportunities to learn and grow
- Provide training and appropriate leadership style for the person’s level of development
- Mentor, tell stories to provide insight and share practical wisdom
- Facilitate problem solving by asking questions to explore options and alternative strategies
- Establish norms for individuals requesting feedback instead of having them wait to receive the feedback they need to learn and grow. [*Feedback-rich environment*]

<i>Elements</i>	<i>Job You Love</i>	<i>Job You Hate</i>
Autonomy	Feel in Control	Feel controlled
Mastery	Feel like using full potential for growth and development... Being competent and confident	Feel like not using full potential. No growth or development...No competence or confidence
Purpose	Feel like work matters and you make an impact in life (Meaning)	Feel like work does not matter and you don't make a difference

Meaningful Work

- Meaningful work refers to the degree in which a person sees their own work as being significant, important for themselves and the society; meaningful work is a fundamental human need
- Represents the clear knowledge and understanding of the purpose, intention, value, direction and logic behind the work of the individual
- **The most powerful motivators are not financial incentives or threats of layoff or other punishment, rather a continual reinforcement of the notion that work has meaning and is a joyful experience**

Schultz, (2015)

Why did you choose law enforcement as a career? (Respondents could select all that apply.)

Reynolds, (2022) and Harrison, (2022)

Analysis of the Findings

Reynolds, (2022)

Officers wanted their leadership to:

- To communicate, to be consistent, to care
- Creating a workforce that is optimistic about the future
- Be proud of the work it does
- Create an environment where officers feel they are cared for by their supervisors and managers

Generational Enablers

Rickwood, C., Ginnivan, N., Li, M., Hambisa, M., & Anstey, K.
(2024).

Four themes were identified by participants as enablers for multigenerational teams to be supported:

- Leadership
- Flexible work arrangements
- Leveraging experience & exemplars
- Intergenerational mentorship & training

- Understanding the impact of gender dynamics, generational shifts such as the expectations of Generation Z, and the importance of diversity and inclusion are critical for modern leaders.
- Mastering these skills requires strategic acumen, emotional intelligence, deep understanding of human behavior, cultural competence, and an inclusive mindset, all contributing to personal and professional growth.

By embedding inclusivity into ethical leadership frameworks and organizational policies, leaders can empower diverse teams, drive innovation, and achieve sustainable success in today's interconnected world.

Akande, A., Bobek, V., Luring, J., Coker, D. C., Pinto, J. F., Akande, E. T. & Kellner, D. (2025)

Generation Z workers (born mid-1990s onwards) show distinct preferences in workplace rewards compared to previous generations.

Figueiredo, E., Margaça, C., García, J. C. S., & Ribeiro, C. (2025).

This systematic review of the literature found that:

- More innovative and enterprising than previous generations
- Value autonomy highly
- Prefer continuous learning opportunities
- Seek meaningful work experiences

They tend to want:

- Learning and development opportunities
- Self-directed training programs
- Creative freedom in role
- Responsibility for innovative projects
- Flexible working arrangements
- Recognition for innovative thinking

The research found that Generation Z is less motivated by traditional monetary incentives alone

Instead, they respond better to:

- Opportunities for personal growth
- Work environment flexibility
- Recognition of creative contributions
- Chances to innovate
- Autonomous decision-making

Organizations need to adapt their reward systems to retain Generation Z talent effectively by:

- Offering development pathways
- Providing creative freedom
- Supporting innovative thinking
- Allowing autonomy in work methods
- Creating meaningful work experiences
- Balance is needed between team and individual recognition

Practical Takeaways

- **Reward systems need strategic alignment** - must connect directly to organizational goals and values, not exist in isolation.
- **One size does not fit all** - modern workforces require flexible reward frameworks that adapt to different generations, roles and working patterns
- **Balance is crucial** - combining financial and non-financial rewards produces better outcomes than focusing solely on monetary incentives.

- **Knowledge sharing drives value** - effective reward systems actively encourage information exchange between employees, boosting organizational capability.
- **Transparency matters most** - clear, fair and well-communicated reward criteria prevent demotivation and staff turnover.
- **Post-pandemic adaptation required** - remote and hybrid working demands new approaches to recognition and rewards.
- **Leadership commitment essential** - senior support and consistent application of reward systems directly impacts success
- **Digital enablement** - modern reward systems need digital platforms to deliver timely recognition, especially for dispersed teams.

- **Generational awareness** - different age groups, particularly Generation Z, respond to distinct reward approaches.
- **Measurement matters** - regular evaluation of reward system effectiveness helps ensure continued alignment with business objectives.
- **Cost-benefit positive** - well-designed reward systems demonstrate clear return on investment through improved retention, performance and engagement.
- **Culture impact significant** - reward systems strongly influence organizational culture and employee behavior patterns.

THE CONTEXT OF LEADERSHIP

“Where it Emerges”

Reasons employees voluntarily leave:

- Unmet job expectations
- Poor job fit
- Lack of coaching and performance feedback
- Lack of professional development and promotional opportunities
- Not feeling valued or recognized
- Workplace stress due to job demands and work-life balance conflict
- Lack of trust and belief in senior leadership.

- The majority of turnover is voluntary and, among those who leave, about 70% of contributing factors could be controlled by the immediate supervisor or manager
- To repeat an old adage,

“People quit bosses, not organizations.”

Orrick, (2008)

The following factors contributing to attrition and retention:

Davies, A.J., Stephenson, A., Briggs, B. and Allan, D. (2024)

- Job satisfaction and organizational factors
- Supervision
- Work-life balance
- Recruitment, Training and Officer expectations
- Financial compensation and job alternatives
- There are differences in factors between this study and previous studies, i.e. recruitment strategies related to officer expectations was identified as a contributing factor
- These additional factors offer a further contribution to future policy and strategy deliberations and implementations to address the workforce levels within police agencies

Thriving at Work and the Role of Organizational Dehumanization

www.Oxford-Review.com

A 2024 study investigating the relationship between organizational dehumanization, employees' taking charge behavior and thriving at work has found that:

- Organizational dehumanization significantly reduces employees' taking charge behavior.
- A negative spiral exists between taking charge behavior and organizational dehumanization over time.
- Thriving at work buffers the negative impact of organizational dehumanization on taking charge behavior.

Practical takeaways

Khan, R., Murtaza, G., & Talpur, Q. U. A. (2024)

- Organizations should be aware that dehumanizing employees can lead to reduced proactive behavior, such as taking charge, which can harm organizational performance.
- Managers should strive to create a humanizing work environment that values employees as individuals and supports their personal growth to encourage taking charge behavior.
- Organizations can foster employee thriving by providing resources such as autonomy, feedback and support, which can buffer against the negative effects of dehumanization on taking charge

- Employees who experience organizational dehumanization should seek to develop their personal resources, such as thriving, to maintain their proactive behavior and mitigate the impact of a negative work environment.
- Organizations should be mindful that a lack of taking charge behavior from employees may be a sign of organizational dehumanization and should take steps to address this issue.
- Encouraging and supporting employee thriving can lead to a more engaged and proactive workforce, benefiting both individuals and the organization as a whole.
- Organizations should prioritize creating a positive work environment that promotes employee well-being and proactivity to break the negative cycle of dehumanization and reduced taking charge behavior.

Implications for leaders and managers

- Create a humanizing work environment that values employees as individuals and supports their personal growth.
- Foster a culture that encourages proactive behavior and employee thriving
- Address issues of organizational dehumanization and take steps to prevent its occurrence.
- Provide resources such as autonomy, feedback and support to promote employee thriving.
- Be mindful of signs of organizational dehumanization, such as reduced taking charge behavior and take action to address it.
- Encourage and support employee proactivity and personal development.

There are two fundamental tensions in work culture:

Grant, (2023)

Results vs. Relationships and Rules vs. Risk

Failing to strike the right balance between these values can lead to the emergence of “four deadly sins” of work culture:

- **Toxicity:** disrespectful, self-centered, micro-managing, unethical boss. No support, selfish cutthroat actions toward employees
- **Mediocrity:** relationships take precedence over results, no accountability or drive
- **Bureaucracy:** excessively rule-oriented, stifling innovation and growth. Red tape impedes decision-making and hampers employee autonomy [*No effort to teach and empower*]
- **Anarchy:** uncontrolled risks and the absence of rules. Strategy and structure are disregarded, resulting in confusion and disarray

Five important characteristics of great leaders

They embrace and practice:

- **Respect:** See value and dignity in everyone, demonstrate civility, thoughtful candor, genuine care, and concern for others (Value over Devalue)
- **Curiosity:** Be unsettled enough in our assumptions to be interested in other's views
- **Humility:** Know we don't know it all. Acknowledge our mistakes and learn from them
- **Sustain a growth mindset:** Where they strive to constantly research, listen, and learn their craft within the operational realities they work
- **Empathy:** See the world through the eyes of others (perspective taking)

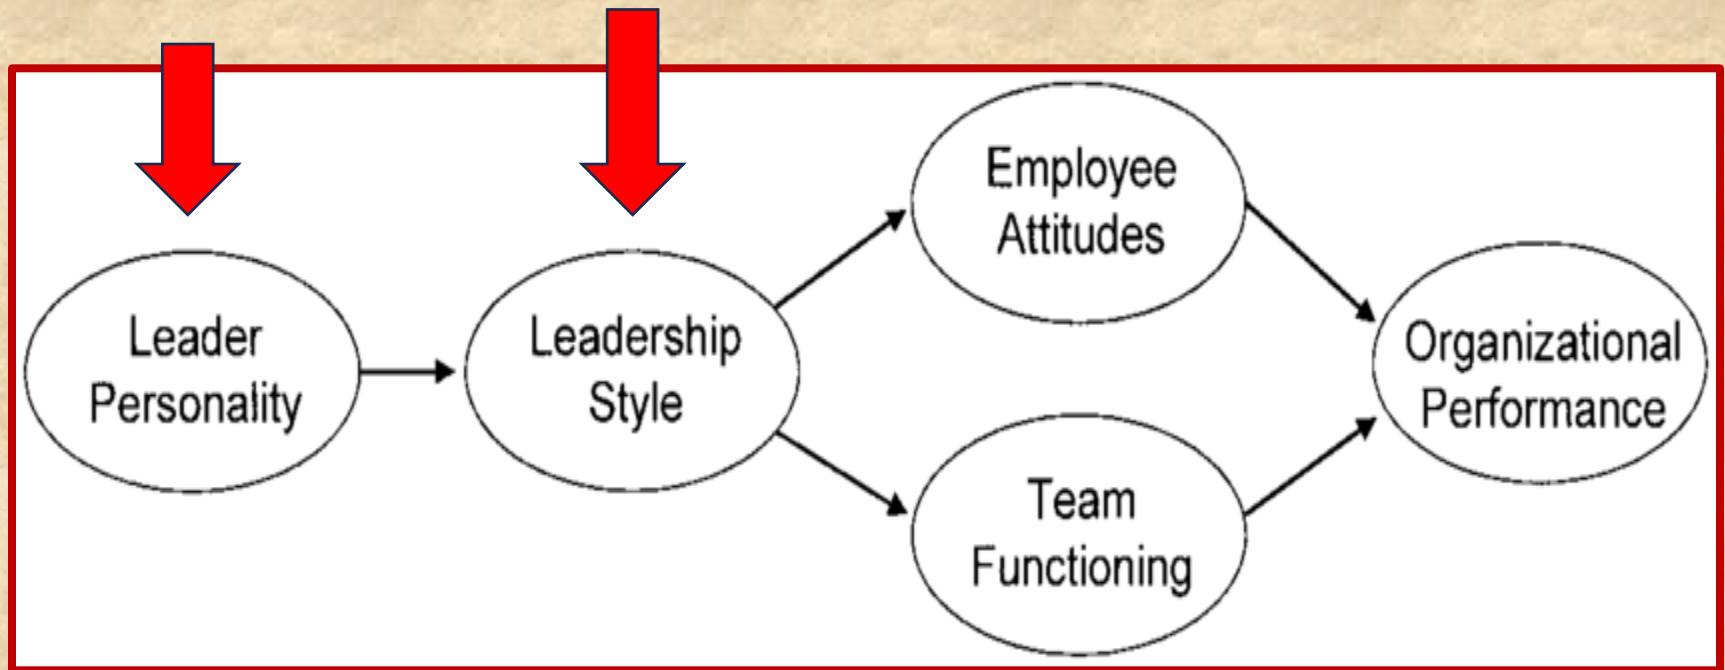

The Practice dynamics of leadership

Filstad, C. & Karp, T. (2020)

- **Producing** refers to the ongoing everyday activities of policing and the common and collective achievements in leadership practices
 - It is about the 'doing' of police leadership practices
- **Relating and social interactions** in policing seem to be based on informal relations between leaders and employees while working
 - The importance of the collegial and social environment is often emphasized by the leaders themselves

- **Interpreting and sensemaking** are integrated in social, cultural and contextual relations and ongoing practice dynamics
 - Different interpretations lead to sensemaking when individuals construct their own sense of self as interdependent and dynamic within leadership practices
- **Negotiating** refers to power and politics, which, according to a practice-based perspective, are integrated and embedded in leadership practice

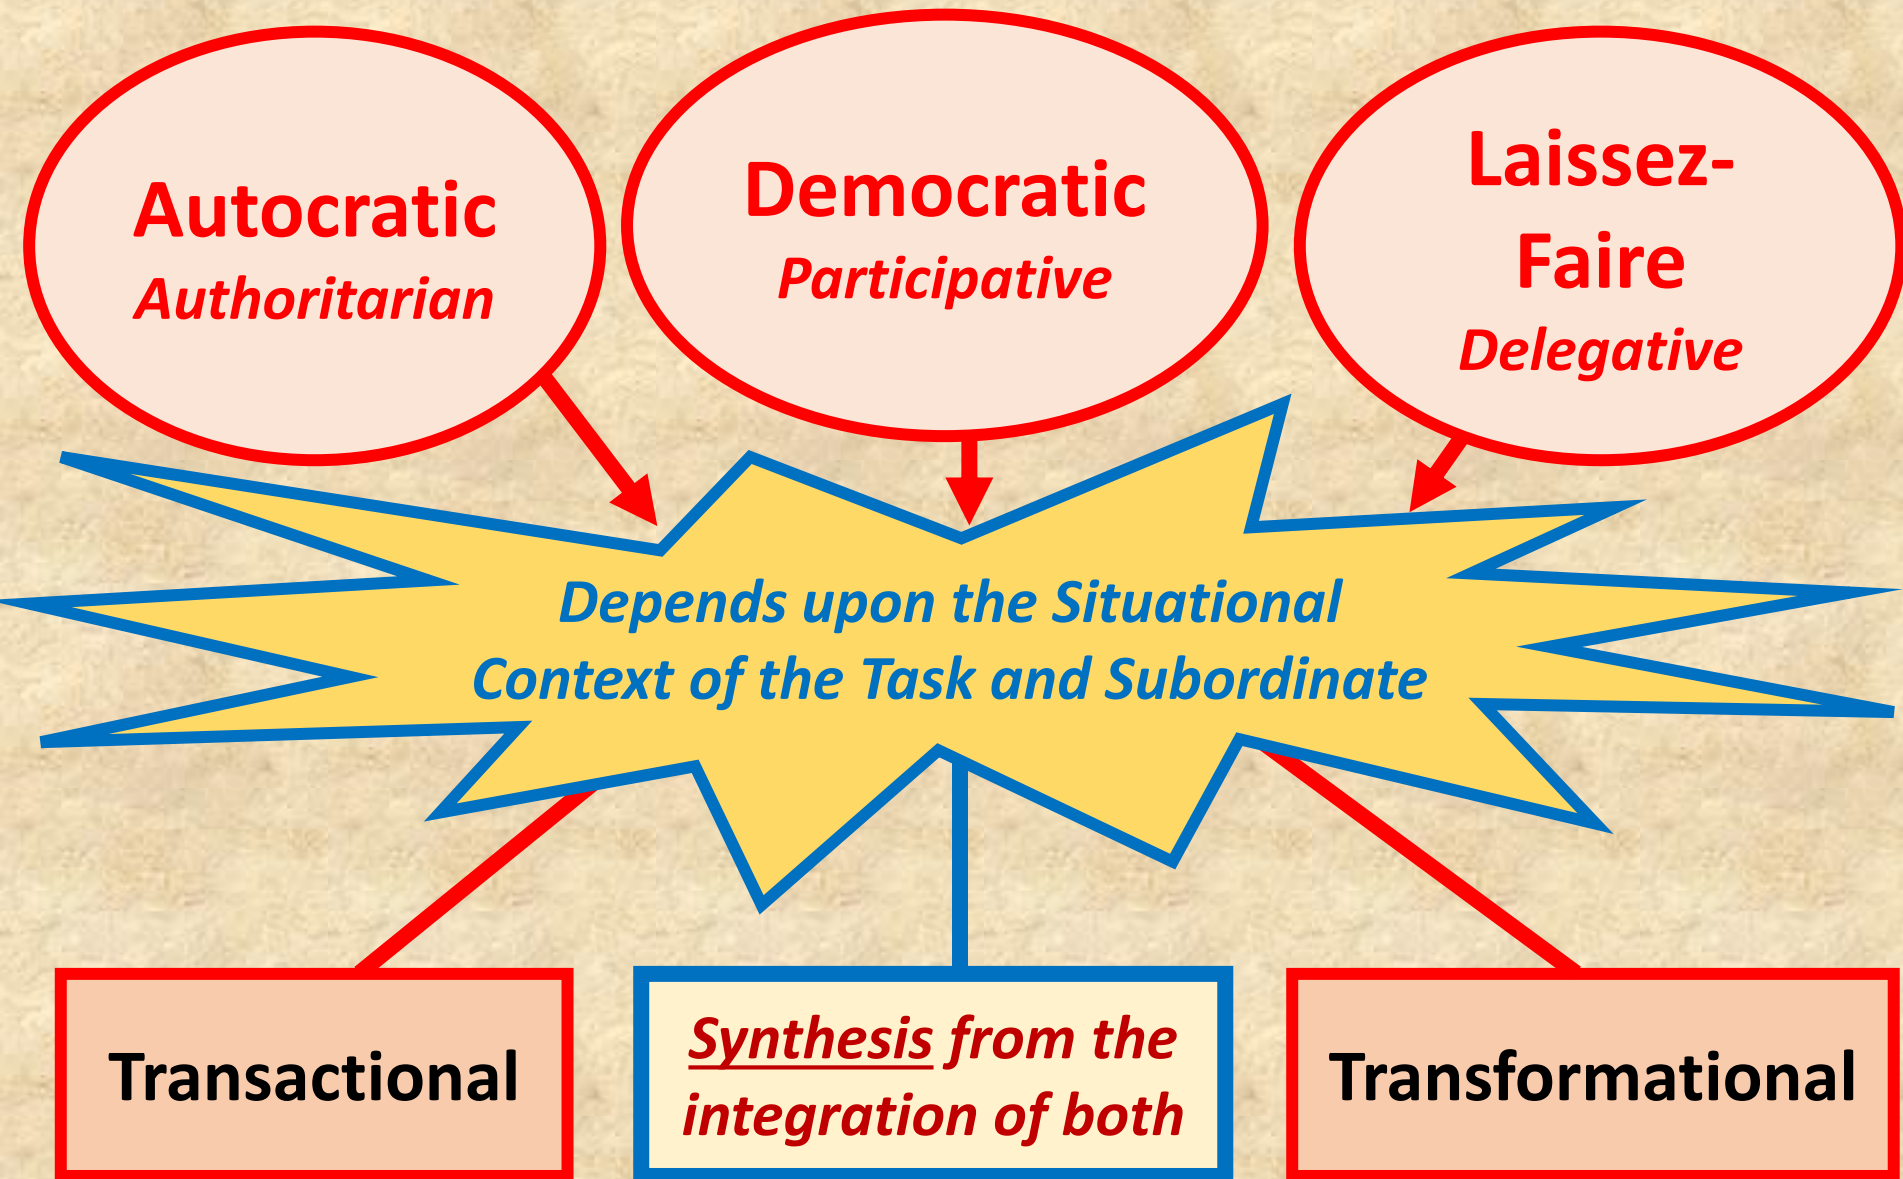

What we know about Leaders

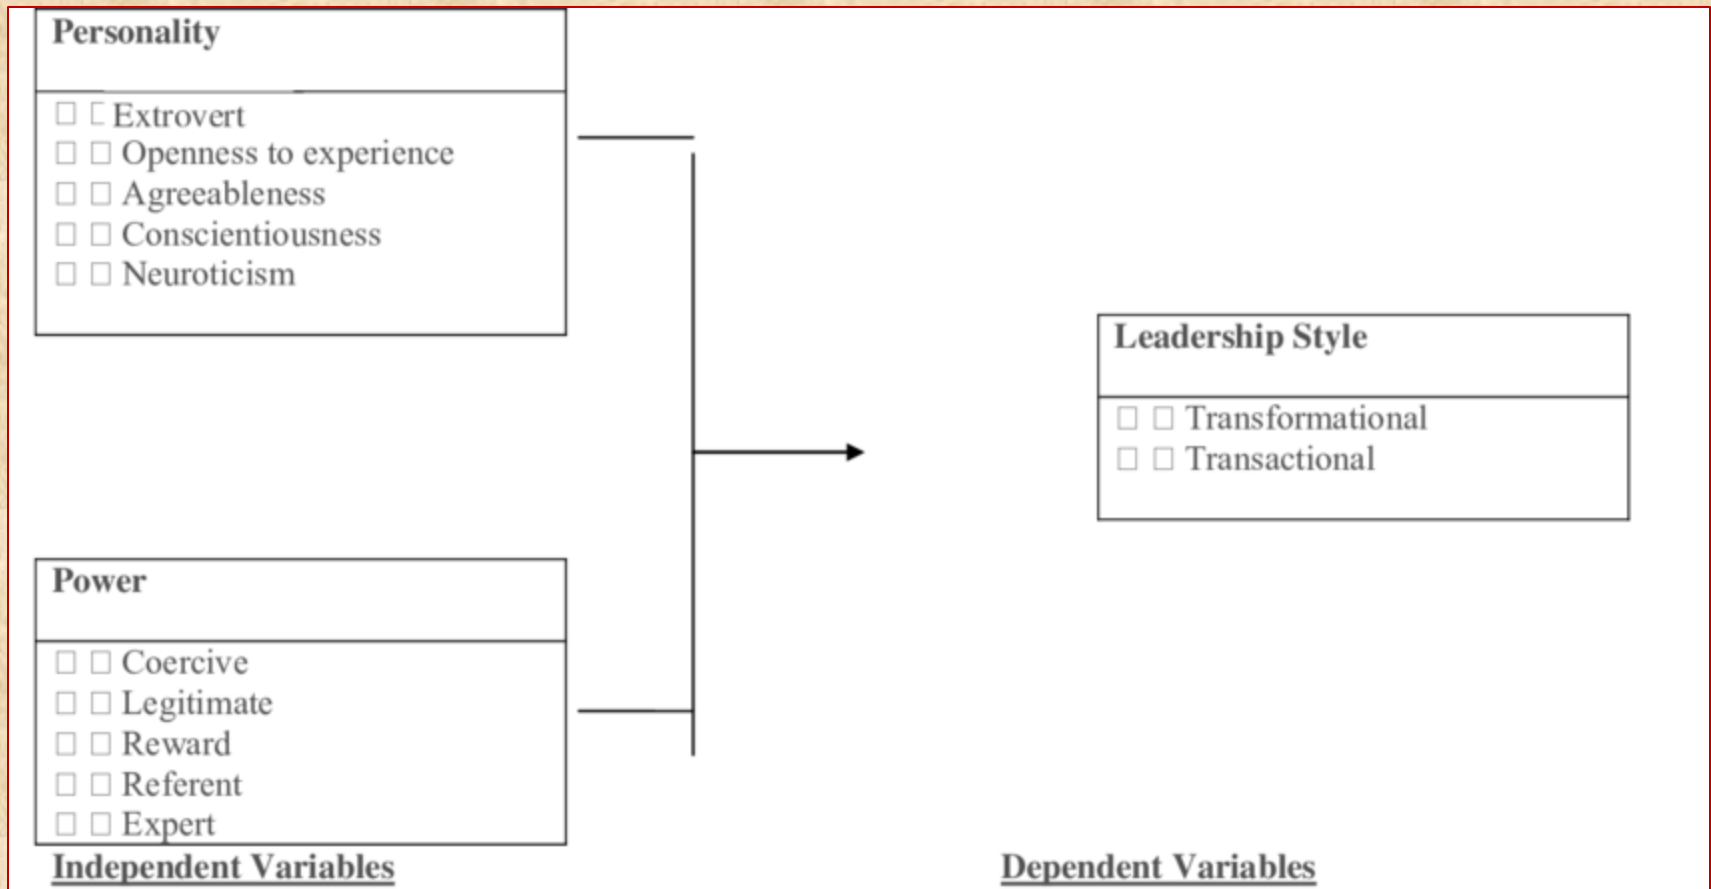

Hogan, R., & Kaiser, R. B. (2005)

Cornerstone in Leadership has Three (3) Perspectives

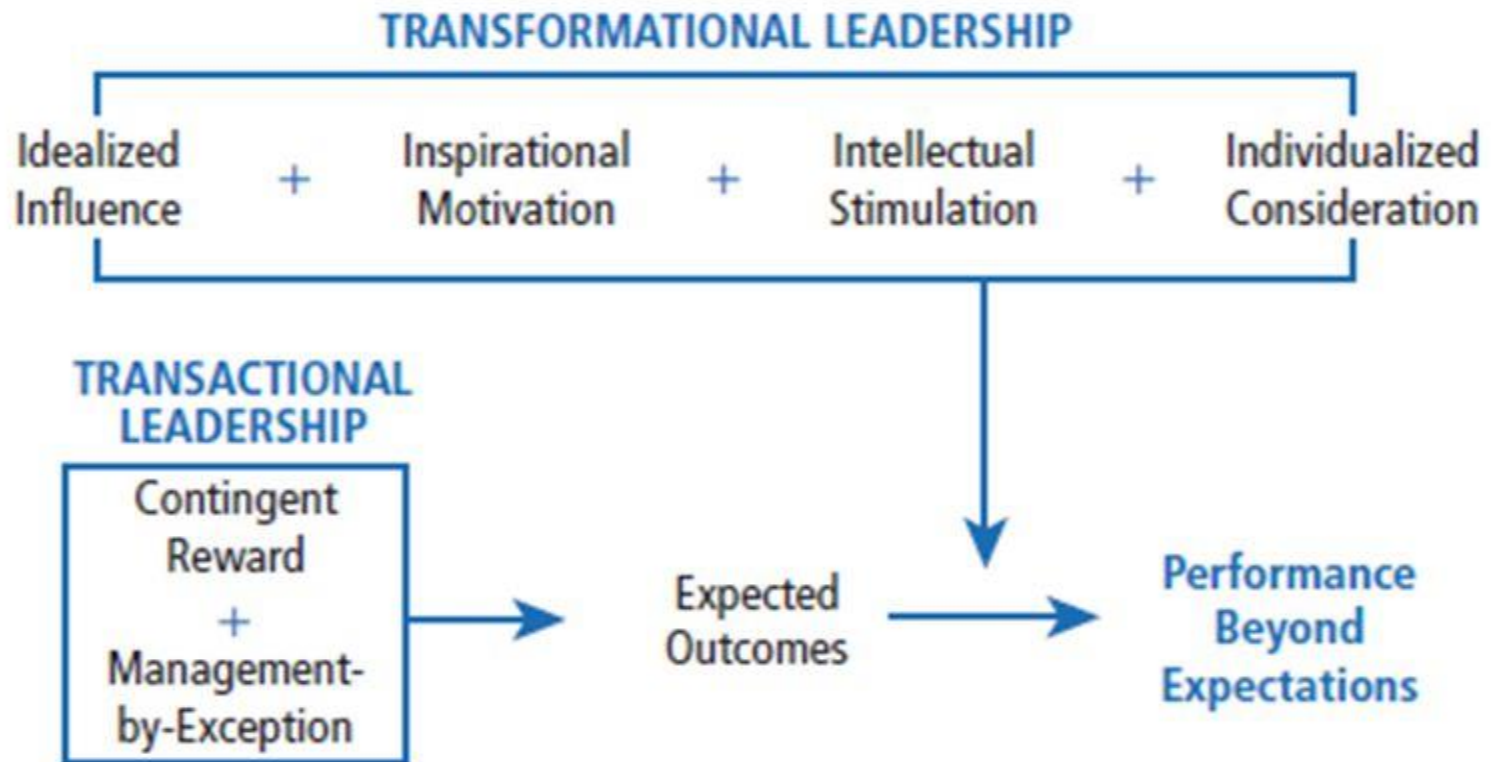

Kurt Lewin (1939)

Yahaya, N. et. al. (2011)

Figure 8.3 The Additive Effect of Transformational Leadership

SOURCE: Adapted from "The Implications of Transactional and Transformational Leadership for Individual, Team, and Organizational Development," by B. M. Bass and B. J. Avolio, 1990a, *Research in Organizational Change and Development*, 4, 231–272.

When to step out

When to step in

THE MANAGEMENT PARADOX

The context of discretion versus developmental maturity and type task

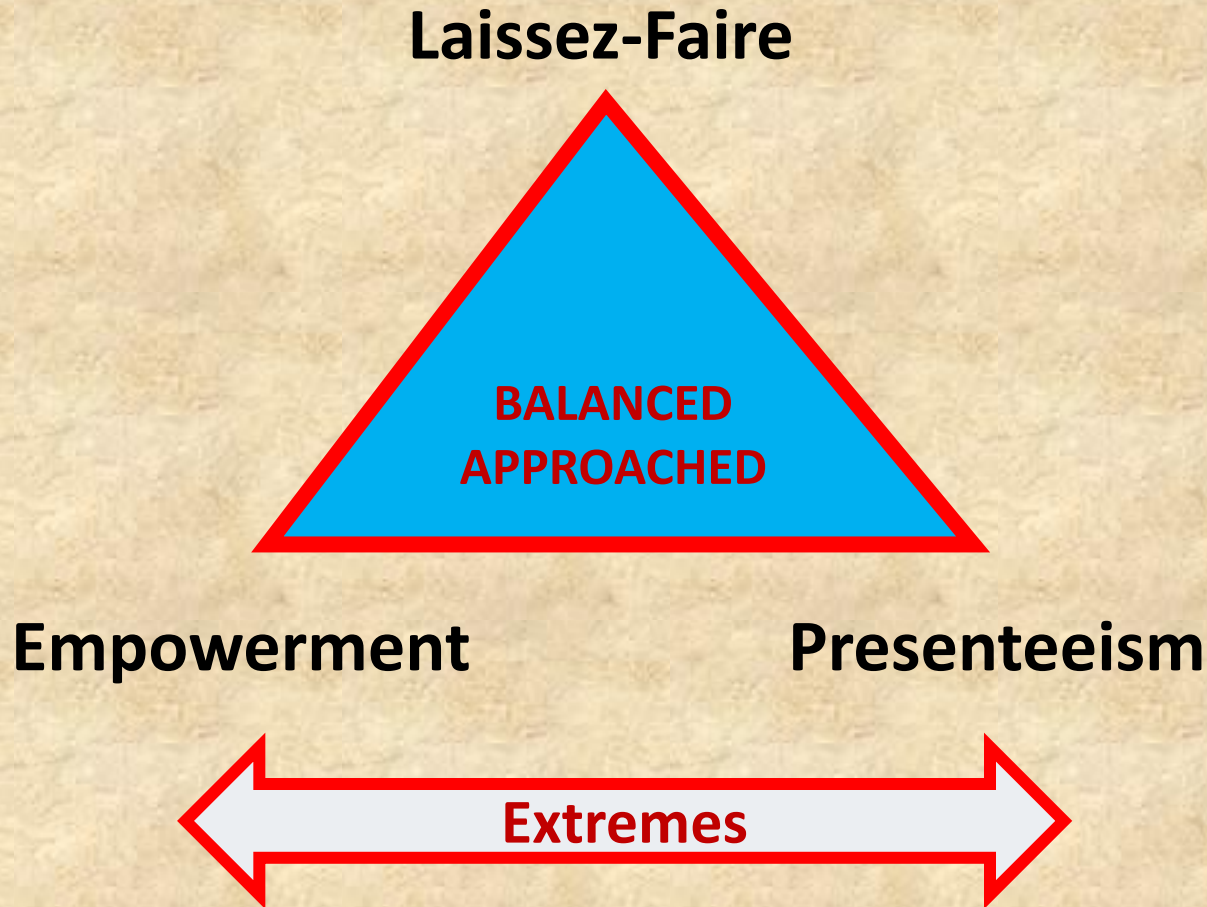

Autonomy

Freedom

Control

Power

The Complexities and Ambiguities of Laissez-Faire Leadership

Contemporary workplace evolution has resulted in significant changes to working practices

- Generational and life-span development
- External and internal influences (personal and professional)
- More attention to work-life balance
- Hybrid/flexible working practices
- A global decline in levels of employee engagement
- Ongoing economic uncertainty and the decline of the 'job for life'

Human beings must be seen as individuals within their own complex context

- **Biological considerations** (from hormones to health issues)
- **Sensory input** (intuitive and rational)
- **Age** (maturity and experiences)
- **Intelligence** (ignorance, knowledge, capacity to critical think)
- **Personality and character** (values and virtues)
- **Emotional considerations** (temperament, bias, belief perseverance)
- **Environmental cues** (situational realities and organic contexts)
- **Capacity** (specific competencies) **versus Capability** (ability, confidence and commitment)
- **Culture cues** (raising, myths, traditions, beliefs and values)
- **Life experiences** (limited social and/or phycological)

Organizations expect to have potentially five distinct generations in the workforce

- ✓ The Traditionalists (born around 1928—1945)
- ✓ The Baby Boomers (born around 1945—1964)
- ✓ Generation X (born around 1965—1979)
- ✓ Gen Y (born around 1980—1995)
- ✓ Gen Z (born after 1995)

This potential for inter-generational conflict arises at the confluence of a number of accelerating trends

- First is the accelerating force of demography in terms of falling pension provision for many Gen X's.
- The enhanced longevity of the Baby Boomers and the rising influence of Gen Y.
- Add to this the accelerating force of technological, which has the potential to create tensions between the technological and social media preferences of generations Y and Z, raised on a diet of Facebook and Twitter.

- Finally, the emerging and accelerating societal trends are also creating profoundly different shaping experiences between the generations in terms of their family experiences
- Their attitudes to work/life balance (particularly on the part of men)
- The potential emergence in Gen Y of women as a powerful source of influence
- The likely preference of Gen Y and Gen Z to be “reflexive” and to make more independent choices.

Four Perspectives on the new generation

Simon Sinek

- ✓ **Parenting:** Told they were special, got grades not earned from teachers who did not want to put up with parents, got participation trophies for just showing up (loss of the practice of dealing with frustration)
- ✓ **Technology:** Engagement with smartphones and social media that produced dopamine (feel good and addictive) Stress of adolescent life, failure to engage and form deep relationships. Lack of social skills, poor relationships, and depression
- ✓ **Impatience:** Instant gratification (amazon, streaming, binge-watching, get information now with google, AI work) No patience, no relationships or joy
- ✓ **Environment:** Organizations that care more about short term game, than personal growth, no mentorship, no balance, exposure to poor or toxic leadership

- They're often called demanding, always wanting more—flexibility, perks, money—and, worse, they seem to feel they're entitled to it.
- Gen Z's have the tendency to self-advocate and job hop
- Lacking an understanding of the implicit “soft skills”—including professional communication, emotional intelligence and time management
- A sobering 42 percent of Gen Z members experience symptoms of depression, and many are comfortable talking about it in the workplace.

A whopping 74 percent of managers and business leaders reported that they find it more challenging to work with members of Gen Z than with workers from other generations.

- As Gen Z continues to fill the ranks of the workforce, it's incumbent upon today's leaders to remain cognizant of the unique forces that have shaped this generation.
- It is crucial to bear in mind that one's generation is just one piece of their personality's complex puzzle.
- Any time we try to characterize an entire generation as being just one way, we are already wrong.

Generational identity is just one layer of who we are, and it interacts with our age, race, gender, socioeconomic status and more to form our perspectives on work.

Gerhardt, M. (2024)

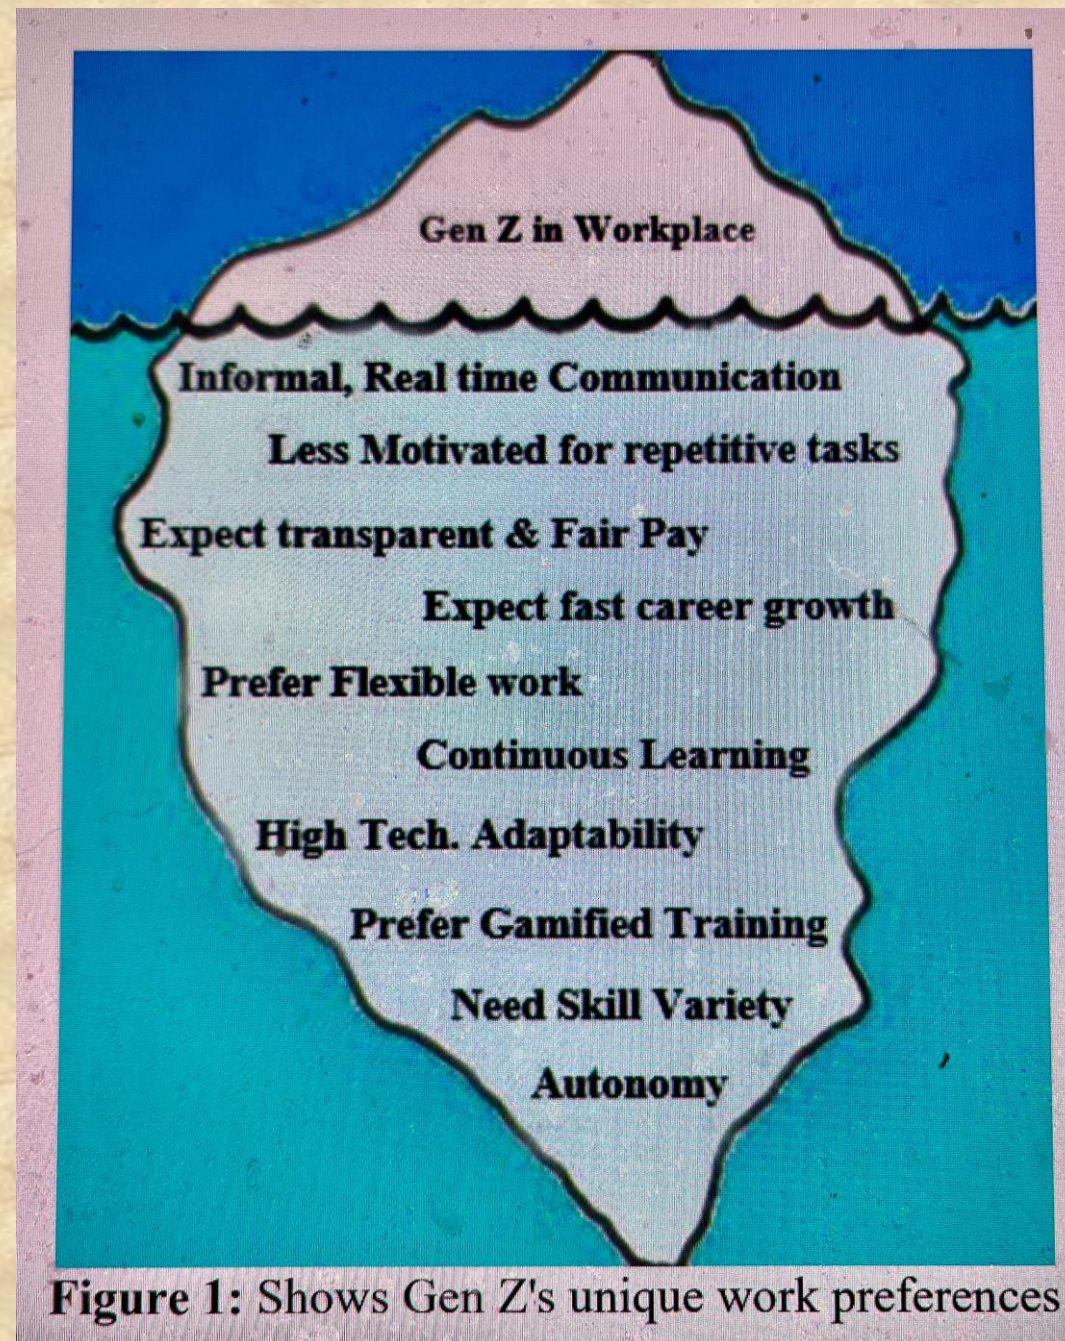

Figure 1: Shows Gen Z's unique work preferences

- Gen Z are typically self-driven, collaborative, and diverse-minded.
- They value flexibility, authenticity, and a pragmatic approach to addressing problems.
- Gen Z are misunderstood.
- Contrary to stereotypes of being “lazy” or “coddled,” Gen Z is entrepreneurial and adaptive.
- There is an opportunity for intergenerational collaboration to foster mutual learning and understanding to bridge the gap between traditional norms and modern approaches.

Katz, R., Ogilvie, S., Shaw, J. and Woodhead, L. (2022)

- While there are differences between the situations and context of the generations
- The stereotypes of generations (Gen Ys being work shy, Baby Boomers struggling to use technology, Gen X feeling alienated and disengaged) are rarely accurate.

Gratton, L. (2025)

A Different Perspective

- We encourage people to adopt a lifespan developmental perspective on aging at work, which considers age along a continuum rather than in terms of discrete generational categories
Rudolph & Zacher, (2022)
- **From this perspective, learning and development is seen as a lifelong process for every individual, regardless of when they were born**
- **The important difference here is that any generational differences are seen to emanate from experience and knowledge**

Henry, Zacher & Desmette, (2015), Pinelli, Sease, Nola, Kyle, Heldenbrand, Penzak, & Ginsburg, (2018), Rudolph & Zacher, (2018) and Wilkerson, (2018).

RESEARCH POINT

Five Motivators (*NOT PERSONALITY TRAITS BUT INFLUENCES*) for Generational Employees

David Wilkinson, of the Oxford Review.

- Comfortable lifestyle
- Knowledge sharing
- Task orientation and autonomy
- Development opportunities
- Organizational Justice

*They desire
feedback*

The Reality

- The contemporary workplace is a complex ecosystem where multiple generations converge
- A multidimensional approach that organizations can utilize to foster a more inclusive work environment
- The importance of lifelong learning initiatives, designed to equip employees with the skills and adaptability necessary to navigate a rapidly evolving work landscape is crucial
- Collaboration and flexibility harness the collective strengths of a diverse workforce

The Reality

- Fostering open communication to create a truly inclusive space for all employees
- Ultimately, this examination of generational diversity underscores the potential for a synergistic workplace
- When organizations move beyond stereotypes and embrace the richness of intergenerational collaboration, they unlock a wellspring of innovation, improved employee satisfaction, and ultimately, enhanced organizational performance.

Wyatt, Z., & Potage, V. (2024)

- Younger and older generations are much more similar than different

Fotso, G. M. N. (2024)

Remains true today

- From a practical perspective, these two generations (Millennials and Generation Z), characterize leadership effectiveness as those that lead by example, those that know their teams, and those that are team-oriented.
- Practically, these three competencies are invaluable to organizations today

Aguas, M. J. (2019)

Role Strain and Role Overload

- **Role strain** (i.e., role conflict) used as a framework to examine the challenge of balancing work and home roles (e.g., Duxbury & Halinski, 2018; Griffin & Sun, 2018; Joseph & Nagarajamurthy, 2014; Karaffa et al., 2015; Youngcourt & Huffman, 2005)
- **Role ambiguity:** when the information about expectations related to an employee's role is ambiguous or deficient
- **Role overload** is defined as circumstances in which an individual does “not have enough time or energy” to meet organizational demands Duxbury et al. (2015)
- Occurs when an individual lacks the resources or capacities necessary to successfully and confidently fulfill a role Creary & Gordon, (2016)

Contextual, Nuanced, and Blended

- **Extrinsic values:** typically involve pay, occupational status, and opportunities for advancement (Chen, 2014; To & Tam, 2014)
- **Intrinsic motivation:** involves performing a work activity because intrinsically is inherently interesting, pleasurable, satisfying, positive work environment, employees are heard and respected, and the most self-determined form of motivation (Deal, et, al., 2013; Stinchcomb & Leip, 2013). Kooij, De Lange, Jansen, Kanfer, and Dijkers (2011)
- **Work-life balance:** has become an important issue for both employees and organizations (Madipelli, Veluri-Sarma, & Chinnappaiah, 2013). Gursoy, et al., (2013) described work-life balance as a separation of work and personal life. Work-life balance is defined as a person balancing the demands of work with personal, family, domestic, and social responsibilities (Kumar & Chakraborty, 2013; Sundaresan, 2014).

Work Life Balance

- Understanding the antecedents of life satisfaction of employees is of crucial interest to managers at workplaces.
- It is suggested that managers should engage employees in co-constructing their work and home boundaries, with a view to increasing the life satisfaction of employees.

Mittal, R., & Bienstock, J. E. (2019)

The impact that proper childcare resources and social support play on organizational commitment

Padilla, K. E., Smith, W. T., & Renfro, K. (2025)

- Childcare resources and parental support remain a concern for many women police officers, who oftentimes become disparately impacted in the workplace due to their identity as a parent.
- Parental support and social support have significant positive direct and indirect effects on organizational commitment.
- Findings further contextualize that challenges related to scheduling and promotion, breastfeeding, and differential expectations between mothers and fathers are prominent.

Work-family conflict may be considered a threat to justice in organizational contexts because work-family conflict refers to ‘a form of inter-role conflict in which the role pressures from work and family domains are mutually incompatible in some respect’

- Police work is often associated with high demands and high levels of stress that very often affect their personal lives very negatively
- A negative association between work-family conflict and well-being has been repeatedly found to negatively impact organizational commitment

Correia, I., Carvalho, H., Romão, Â., & Val, S. (2025)

Parental Support and Social Support

- **Parental support:** sufficient maternity/paternity leave,' reasonable day care options during shift, support from supervisors and peers regarding childcare responsibilities and issues that arise.
- **Social support:** people are close enough to you that you can count on them if you have personal problems, how easy is it to get practical help from neighbors if you should need it.

Have a significantly and positive direct effect on organizational commitment

Work Engagement

- Work engagement is a common issue of interest across organizations
- Work engagement refers to a positive, fulfilling, work-related state of mind characterized by three factors:
 - Vigor
 - Dedication
 - Absorption

- **Given the very different outcomes, it is important to be able to distinguish between work addiction and work engagement in organizations**
- However, this distinction is not always easy to make, as both work addiction and work engagement involve high levels of work involvement, time spent on work and work-related passion

Both work addiction and work engagement may be influenced and predicted by similar factors, such as personality traits, work characteristics and organizational culture

Practical Implications for Leaders

Oxford Review Research Briefing: The Differences Between Work Addiction and Work Engagement, (2024)

www.Oxford-Review.com

- Be vigilant in identifying signs of work addiction among team members and provide support when needed
- **Model healthy work-life balance and encourage team members to prioritize self-care and well-being**
- Foster a culture that values balanced development and discourages excessive absorption in work
- Regularly check in with team members to ensure they are not overworking and provide guidance on managing workload effectively

- Many still see the police service as a long-term career and indicate little intention of leaving, raising further questions surrounding the reasons for the current high attrition rates.
- Reasons for the attrition suggest low job satisfaction, poor welfare and organization culture
- Findings illustrate the importance of implementing retention strategies prioritizing stability, officer support, and community engagement to cultivate a trusting relationship between the police and the public.

Cox, C., Blockley, T., Hagan, R., & James, A. (2025)

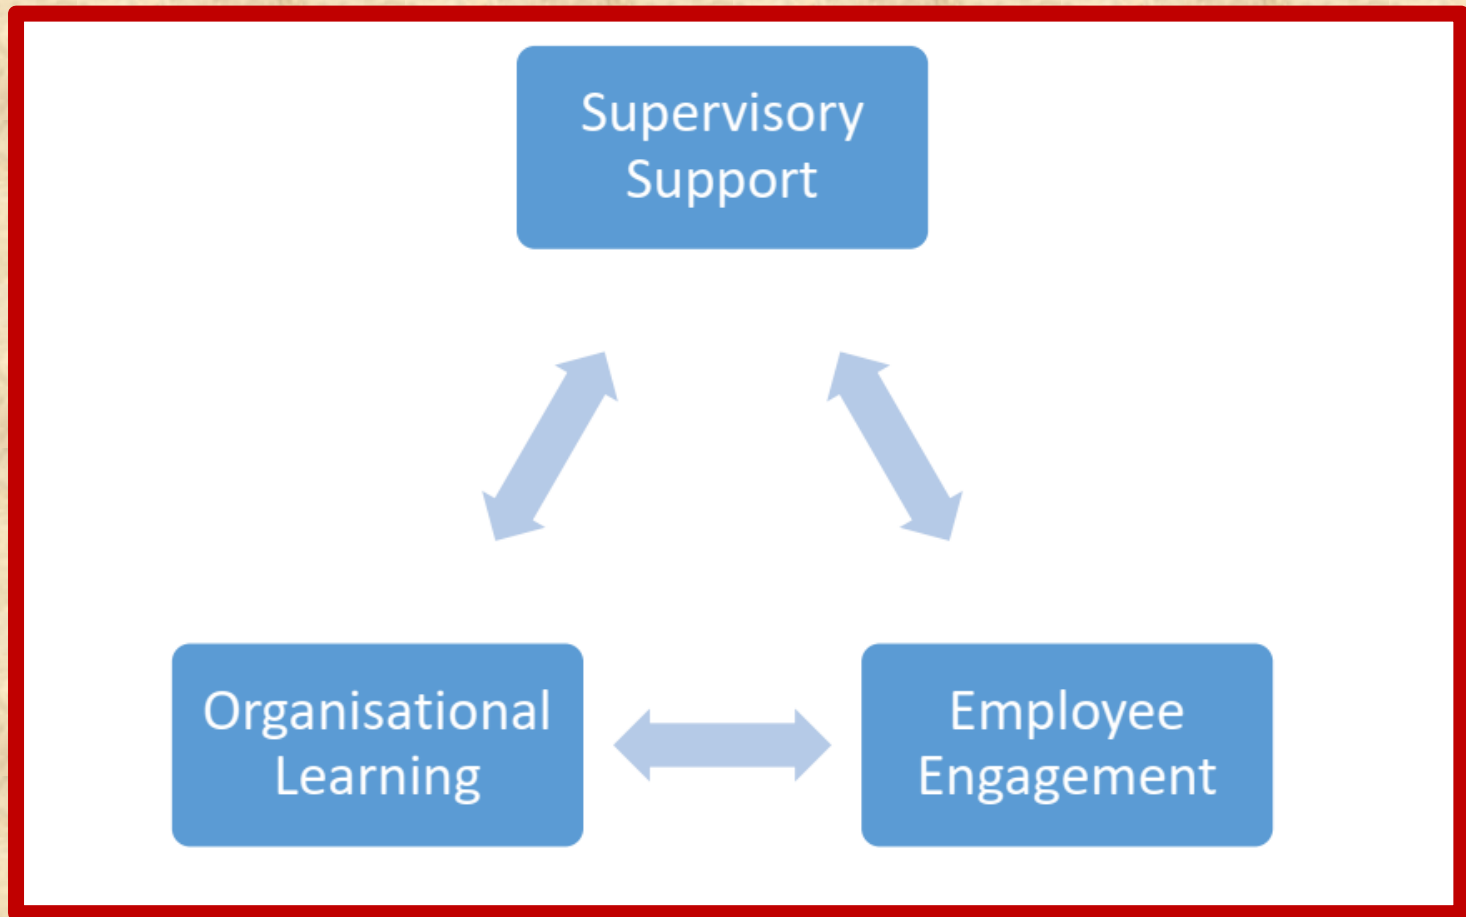

- Findings indicate that many commonly theorized predictors of job satisfaction and stress do not directly influence intentions to seek another career (i.e. role clarity, job danger, autonomy, relations with coworkers, and value congruence with shift),
- But do display an indirect relationship via job satisfaction and stress.
- Most predictors that do hold a direct relationship with intentions to leave were partially mediated by job satisfaction and stress

- Embracing a new culture of talent management and upskilling to enhance employee engagement would allow police agencies to create a pipeline to future aspirational career mobility.
- Unlike the pipelines of old, which relied primarily on years of service as a method of replacing retiring staff, this cultural shift towards talent development and performance assessment has already begun to connect employees across generational divides in an effort to build effective leadership paradigms.

Rossler, M. T., & Scheer, C. (2025)

- These findings suggest that organizations that provide flexible work arrangements, uphold fairness, and create psychologically safe environments can encourage employees to exhibit behaviors that benefit the organization beyond their core responsibilities.
- The implications of this study contribute both theoretically and practically to the fields of organizational behavior and human resource management by offering insights into how non-obligatory employee behaviors can be fostered through supportive work environments

Rama, R. (2025)

The Big Three Dynamics of Leadership

Organizational Justice

Three situations where conflict is most likely to arise:

By: David Wilkinson the Oxford Review

- **Change**, This is unsettling to all involved in the process and can cause ructions in an organization.
- **Conflicting goals and objectives**, with different values and priorities
- **Limited resources**, Where bodies within the organization are competing for the same resources, this can lead to problems arising

Fair Process Consist of Three (3) Principles

Kim and Mauborgne HBR

1. **Engagement:** Involving individuals in decisions by inviting their input and encouraging them to challenge one another's ideas
2. **Explanation:** Clarifying the thinking behind a final decision
3. **Expectation clarity:** Stating the new rules for the game, the performance standards, penalty for failure and new responsibilities

Fairness is a Bedrock Standard

The three (3) Key features

“The Issue of Fairness”

“Engagement”

OPENESS: Everyone knows the rules for playing at the very beginning (**up-front put-on notice**)

CONSISTENCY: The rules are enforced consistently in the same situations

IMPARTIALITY: The rules are applied equally, no matter the relationship to the person administering the rules

Organizational Just Work Environment

“How we perceive treatment with fairness”

- We all steer behavior according to personal priorities
- Those priorities themselves can have sources independent of the desire for self-interested benefit alone

CROPANZANO, GOLDMAN AND FOLGER (2005)

People do not care about the outcomes as much as they do about the process they experienced

- *The blend of procedural and organizational justice process with servant and transformational leadership is central to the perception of fairness*

○ ***Fairness is a feeling***

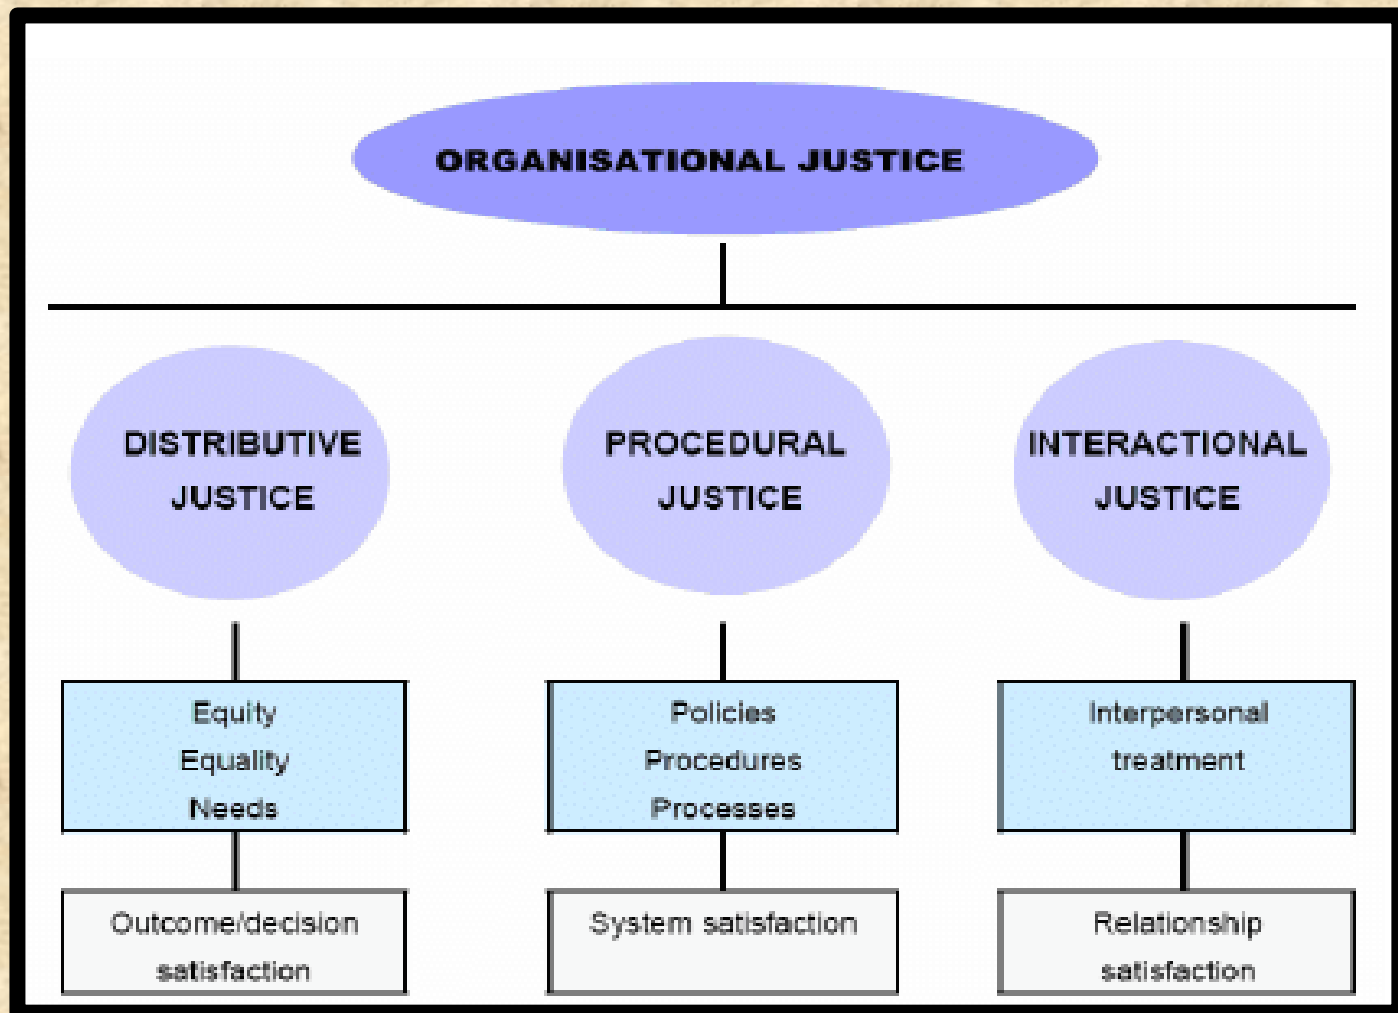

○ ***Justice is a process***

Three Dimensions of Organizational Justice

Central to Peoples Perspective of Fairness in Organizations

Greenberg & Colquitt (2008)

- **Distributive justice:** The concern for fairness in resource distributions, such as pay, rewards, promotions, and the outcome of dispute resolutions.
- **Procedural justice:** People also attend to the fairness of the decision-making procedures that lead to those outcomes, attempting to understand how and why they came about.
- **Interactional justice:** Individuals are also concerned with the nature of the interpersonal treatment received from others, especially key organizational authorities.

Organizational Justice (Greenberg, 1990)

The Key is the Leaders Legitimacy

- The fair exercise of authority by the leader
- At the center is trust:
 - The perception of fairness or unfairness shapes trust
 - How fairly does the leader exercise their authority
 - **Treatment is essential to that judgement of trust**

Four Essential Components for a Leaders Behaviors to Influence the Subordinate's Perception of Fair Process

Adapted from Tyler, (2011)

1. Being treated by your supervisor with dignity and respect
2. A supervisor who values and provides an opportunity for you to voice your concerns or opinions
3. A supervisor who is transparent, and explains their decision-making process
4. A supervisor that remains neutral, impartial and conveys trustworthy motives

The Key is being treated fairly

“Three Dimensions of Justice”

Often, the outcome is not as important as the treatment and process we experience

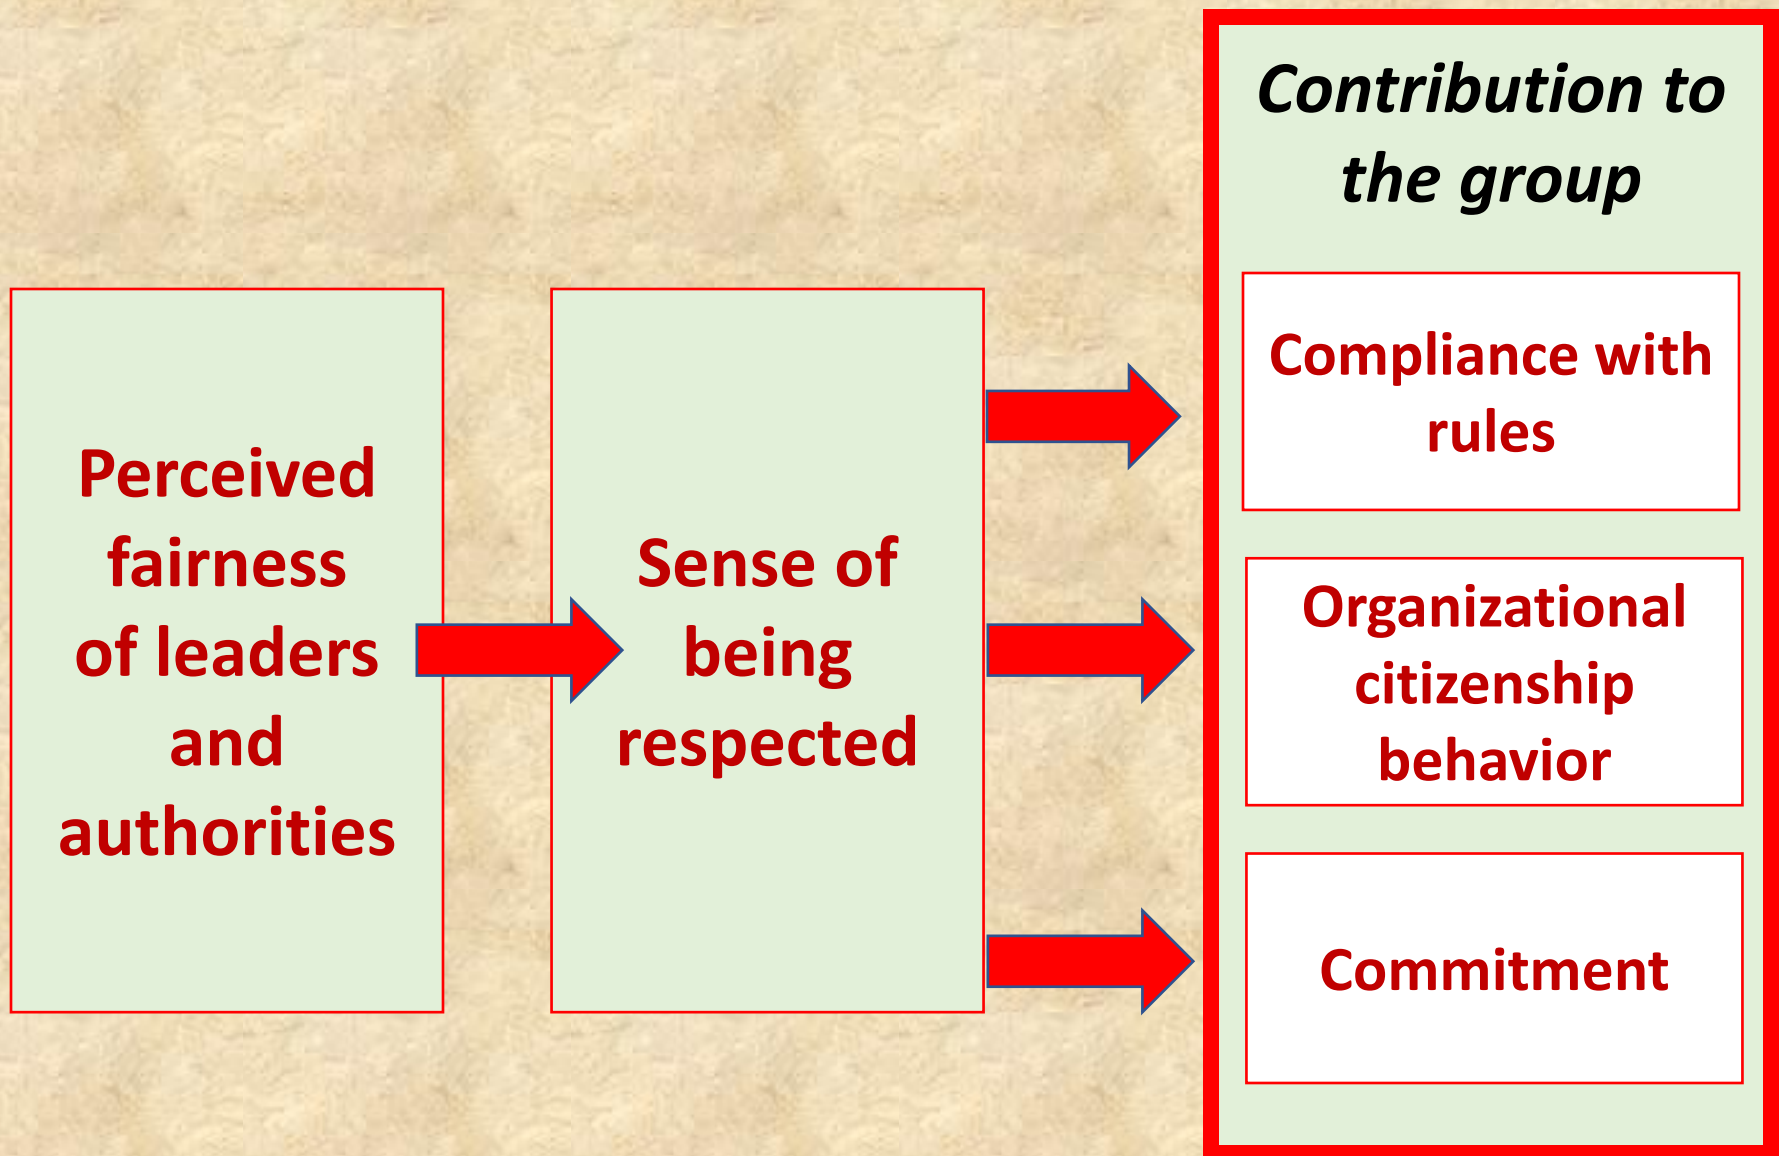

“LEGITIMACY”

Dr. Tom Tyler’s Research at Yale University

When Officers Experience Legitimacy and Fair Treatment

- Officers perform better
- Less turnover
- Officers experience less stress
- Officers have better mental and physical health
- When officers experience and understand the concept of fairness, then they treat others they deal with fairer also (less use of force)
- Officers become more responsive to the directives of management
- Officers become more willing to voluntarily do what is needed for the organization to thrive, including following the rules and cooperating with coworkers to complete tasks

Tyler & Blader, (2000) replicated time and time again into 2022

Important and Timely Research

Nix & Wolfe, (2016), Weisbud, Alpert & Amedloa, (2018), Rodell, Colquitt & Baer, (2017), Wolfe & Piquero, (2016), Wolfe, J. Rojek, Manjarrez, & Rojek, (2018), Reynolds & Hicks, (2015) Andreescu & Vito, (2021).

- Studies now accept the existence and relevancy of de-policing [The Ferguson Effect]
- Subjective opinions of media negativity on de-policing and negative law enforcement executive influence on de-policing were significantly correlated
- This indicates a potential association between media portrayal of law enforcement and executive actions (increased Internal Affairs or enhanced policies)
- Leadership is highly influential regarding de-policing

- The internal dynamics of a police department shape the way officers relate to their organization and how they approach their job
- Recent work has highlighted the importance of fairness in creating a supportive organizational climate within police departments
- When supervisors are fair and cultivate confidence among officers, they can minimize the harmful effects of negative publicity
- Studies have highlighted the importance of sergeants and upper-level management, particularly how front-line officers view those members in supervisory/leadership positions

- **Supervisors should be fair, objective, honest, and respectful when dealing with their subordinates in order to communicate that the agency has their back even when it may appear the community does not**
- Research suggests that organizational justice—that is, respectful and fair treatment of officers by their supervisors—may reduce the impact of officers' hostile media perceptions
- Law enforcement officers who believe their supervisors are organizationally fair are more satisfied with their jobs, more confident in their authority, and more likely to use procedural justice.

- Organizational justice appears to be more salient to [officers] facing uncertainty because **supervisor fairness provides cues that the agency has their best interests in mind and will support them in the future**
- In policing, then, increasing perceptions of procedural fairness in interactions with supervisors could increase officer productivity and decrease the likelihood that an officer will engage in behavior such as excessive use of force or disparate treatment of minorities
- The proposition is that if an agency takes care of its officers, Its Officers Will Take Care Of The Community

- A major reason for turnover is the perceived quality of supervision
- **The relationship that immediate and midlevel supervisors with their officers has the most influence on an officer's decision to stay or leave the department**

Orrick, (2008)

- Officers need help to balance their life with career
- Perceptions of organizational justice are associated with lower levels of engagement in several forms of police misconduct
- Survey of police officers revealed that most officers believed that their supervisors were not biased on gender or race, but biased on **who you know**, two-thirds said such was the basis for getting a good assignment.

Johnson, (2015)

- **Meta-analysis of current research showed that organizational justice was linked to positive views concerning organizational outcomes, increased trust in the organization, job satisfaction, organizational commitment, and overall opinions of the organization**
Donner et al., (2015)

- **Conversely, perceptions of injustice are associated with increased job stress, police misconduct and rebellious or destabilizing activities**

- Expecting officers to never engage in deviant behavior is not reasonable and when you compare their engagement versus never engaging in the behavior, the authors have found that the most consistent concept is how officers are treated.
 - However, a case can be made that the large and extra-large organizations have higher levels of organizational defiance, and this is a concern for supervision and the culture of the organization.
 - **Thus, the tenets associated with organizational justice are salient and administrators should focus on fair treatment to minimize detrimental behavior among officers**
- Reynolds & Helfers, (2019)

- If officers perceive injustice, regardless whether these perceptions are founded, officers will react in accordance with their perceptions
- When employees feel leadership neither cares about their welfare or appreciate their efforts, they are less likely to perceive that their organization supports them
- To reduce turnover in police organizations, police administrators should implement and follow policies and procedures to ensure a fair, consistent and just treatment of all employees.

Andreescu & Vito, (2021).

- This review highlights the importance of addressing organizational injustice and the cultural, systemic, and structural risk factors within policing to promote healthier and more inclusive workforces for female officers.
- Policymakers and practitioners should critically examine policies and practices that may appear gender neutral but disproportionately impact women, affecting the health and well-being of female police officers.
- By addressing these issues, transformative action can be taken to create safer, more supportive, and healthier working environments for female police officers

Illias, M., Riach, K., & Demou, E. (2024)

- Frontline officers often felt isolated and unsupported by senior leaders, which appears to have reduced morale; engendered a sense of organizational resentment; and resulted in an erosion of respect for senior officers.
- Over the longer term, these factors could impact negatively on policing organizationally.
- Work by Charman and Bennett (2022) on voluntary resignations suggests that perceptions of poor leadership and management still remain the principal ground for police officers resigning from the service

Leslie, N., & Martin, D. (2025)

- Justice perceptions can affect the wellbeing of police officers through its impact on other organizational variables that are paramount for good organizational functioning
- We can expect that a decrease in justice conditions will be accompanied by a decrease in voice behavior, a decrease in vertical trust, and an increase in work-family conflict, all of which will have a negative impact on well-being.
- This means that facing injustice in daily life may decrease belief in a just world and consequently lead to the undesirable consequences

Correia, I., Carvalho, H., Romão, Â., & Val, S. (2025)

- The findings lend support to existing literature highlighting organizational justice as a key factor influencing employee intentions to remain or leave positions of employment.

Exmeyer, P. C., & Jeon, S. H. (2025)

- A growing body of research on organizational justice views indicates that distributive (i.e. perceived fairness of outcomes) and procedural justice (i.e. perceived fairness of procedures to reach outcomes) are linked to salient correctional staff outcomes, such as job stress, job involvement, job satisfaction, organizational commitment, and life satisfaction.

Lambert, E.G. Solinas-Saunders, S. White, D. Hogan N.L. & Barton, S.M. (2025)

Occupational stress and attitudes toward misconduct in law enforcement: The moderating role of organizational justice

Lawson, Wolfe, Rojek, and Alpert (2021)

- Evidence to a growing body of police research on why organizational justice must be a critical component of police managerial practices.
- **Perceptions of fair supervisory treatment have the potential to protect officers from the harmful effects of occupational stressors.**
- **The need for police chiefs, administrators, and all levels of police supervisors to understand organizational justice and its effect on misconduct.**
- Implementation of departmental policies and procedures informed by organizational justice can reap a variety of beneficial outcomes.

- Officers who perceive more Internal Procedural Justice from their immediate supervisors report higher levels of work motivation, view those supervisors as more legitimate, and are less likely to endorse misconduct
- Officers who perceived more IPJ from peers report more procedurally just attitudes toward the public.

Barao, L, Farrell, C and DiOrio, G. (2024)

Unfair treatment is internalized by officers as feelings of 'not being supported' and 'being expendable'

Examining a third level of police organizational climate: Does organizational self-legitimacy shape officer attitudes on the job?

Peacock, R. P., Ivković, S. K., Mraovic, I. C., & Borovec, K. (2023)

- Findings demonstrated that an officer's perception of their supervisors' appreciation for their work is a significant predictor of officers' attitudes toward the public and their work
- While criminal justice scholars have demonstrated the role that perceptions of supervisor fairness have on shaping officer attitudes and behavior across a wide range of institutions, this study suggests that other facets of organizational culture may have a greater impact on officer attitudes toward their job
- Police management programs must recognize the role supervisor signals have in shaping field officers' attitudes and behaviors on the street

The Expendables: A Qualitative Study of Police Officers' Responses to Organizational Injustice.

Reynolds, Fitzgerald, and Hicks, (2018)

- **Organizational events linked to fairness assessments among participants included disciplinary actions, citizen complaints, blocked career aspirations, and officer–supervisor conflicts**
- Overwhelmingly, officers reported these events made them feel angry

These events fostered feelings of increased skepticism and not being supported or feeling expendable

Psychological Safety

Voice is one of the most critical factors in leadership training and education

Wilkinson, D. (2022)
www.oxford-review.com

- Understanding the predictors and outcomes of voice and silence behaviors is crucial for organizations
- It directly impacts employee engagement, innovation and overall performance
- Effectively managing these dynamics fosters a healthier work environment, enhances decision-making processes and strengthens team dynamics, all of which are vital for organizational success and sustainability

Definitions

Voice is:

- Informal and discretionary communication of ideas, suggestions, concerns, problems, or opinions about work-related issues, with intent to bring about improvement or change.

Silence is:

- The refusal to speak up or communicate relevant input, even when there is an opportunity to do so.

Voice behavior has been found to produce several positive outcomes, for instance:

- Higher performance evaluations and ratings
- Greater job satisfaction
- Higher commitment to remaining with the organization long-term
- Higher levels of motivation

Weiss, M., & Morrison, E. W. (2019), Holland, P., Pyman, A., Cooper, B. K., & Teicher, J. (2011), and Farndale, E., Van Ruiten, J., Kelliher, C., & Hope-Hailey, V. (2011)

- The positive association between employee voice, job engagement and perceived voice appreciation is stronger when emotional stability and emotion regulation capability is high, and weaker when emotional stability is low
- There is a positive reciprocal relationship between job engagement and personal resources such as perceived voice appreciation or emotional stability
- Higher levels of emotional stability help employees focus on the positive potential outcomes of using voice, instead of being intimidated by potentially negative consequences

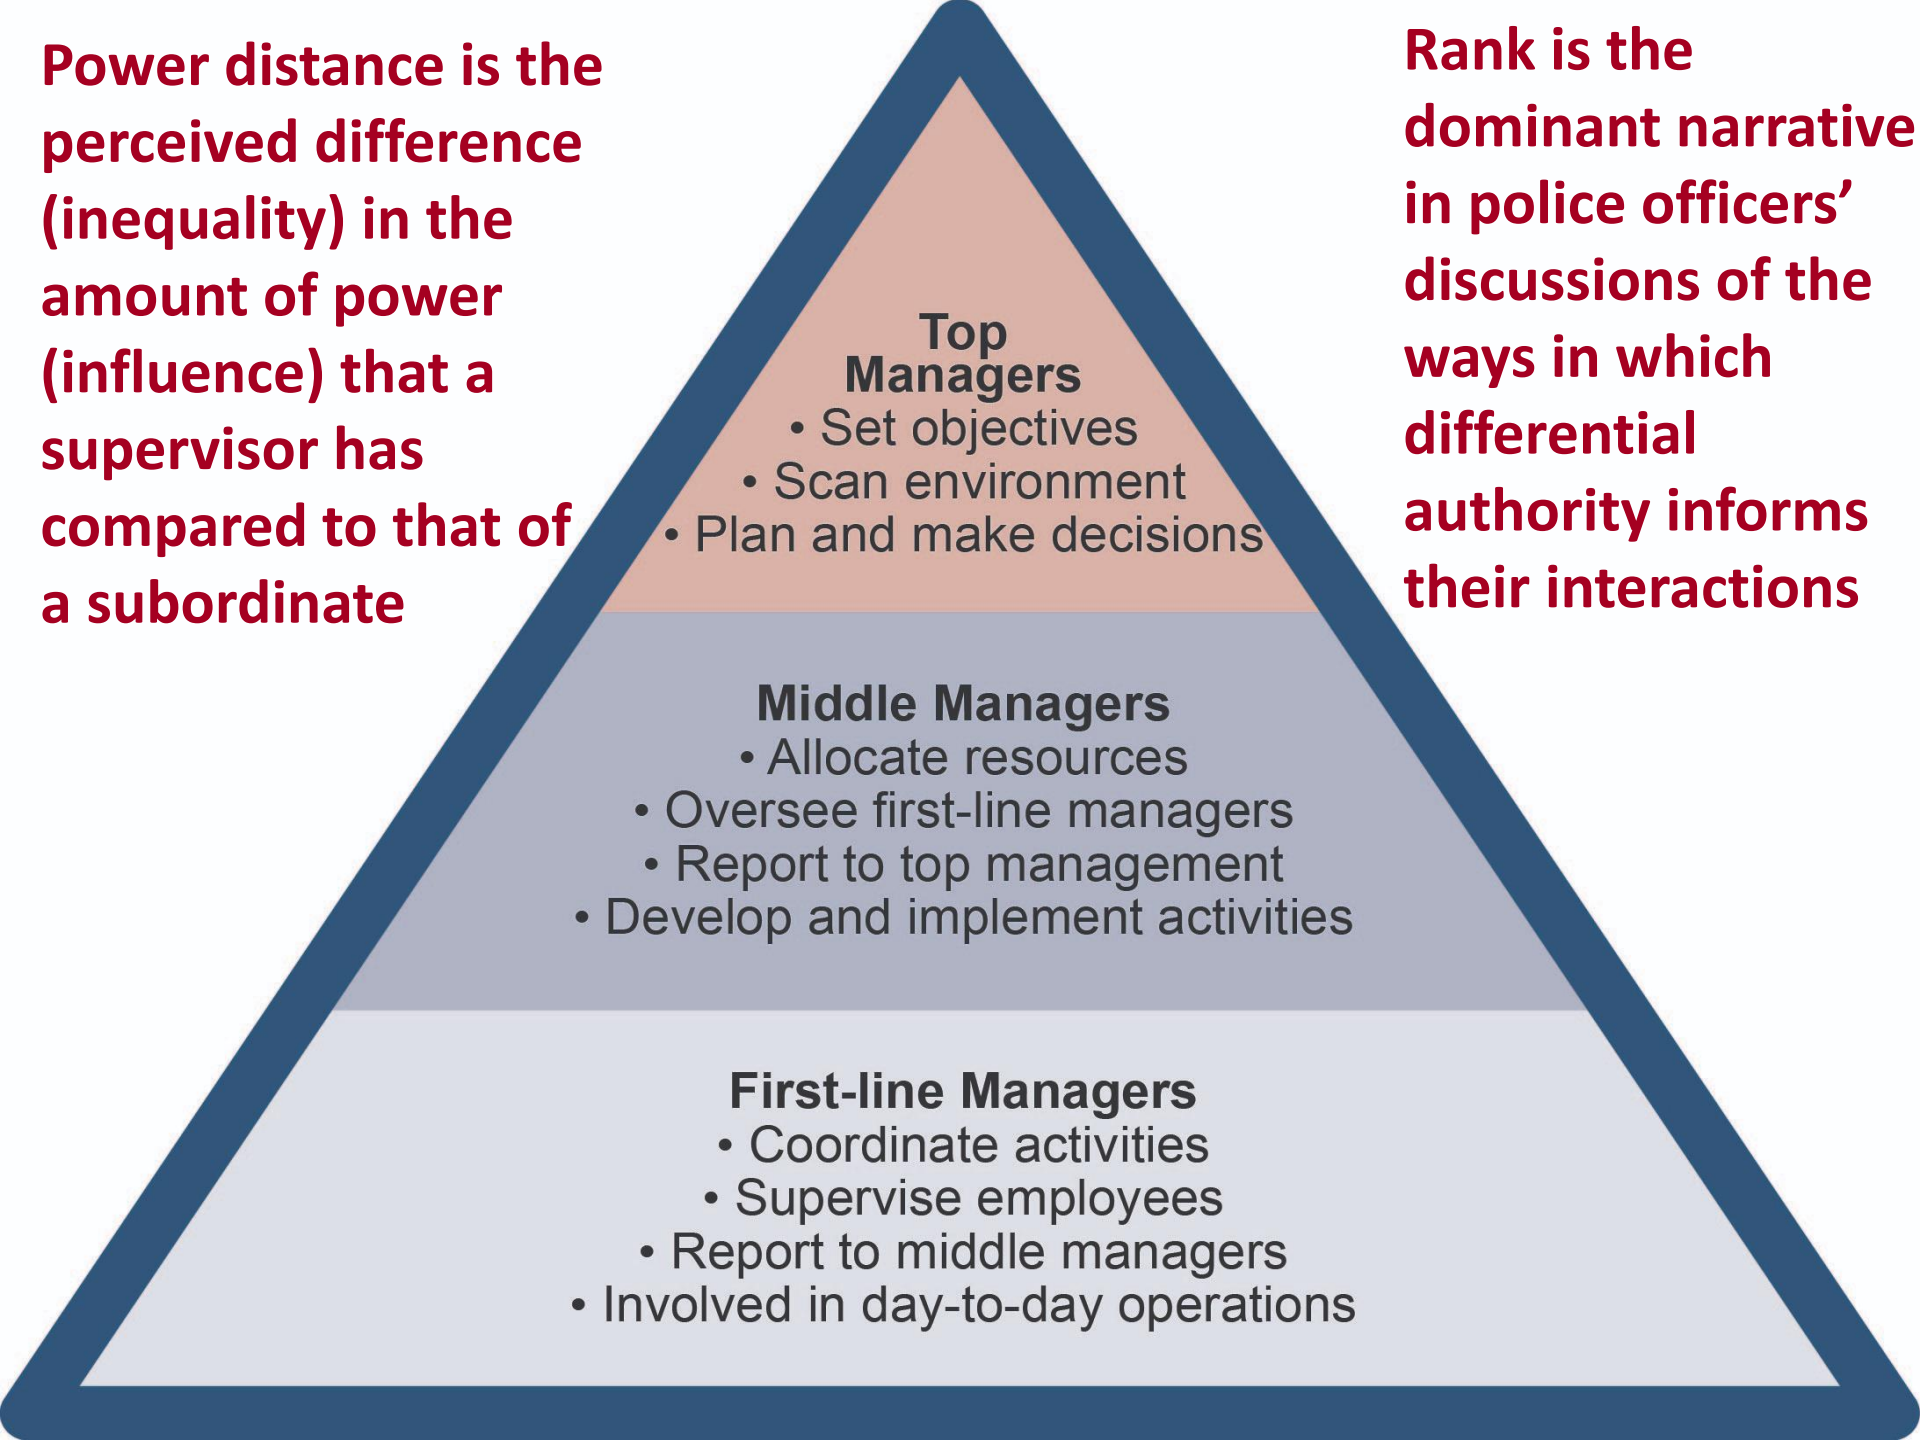

Weiss, M., & Zacher, H. (2022)

Key Point

Positive behaviors that benefit the organization, such as voice and job engagement, are more common when employees feel that their contributions are valued by leaders and co-workers.

Power distance is the perceived difference (inequality) in the amount of power (influence) that a supervisor has compared to that of a subordinate

Rank is the dominant narrative in police officers' discussions of the ways in which differential authority informs their interactions

Low Power Distance Group	High Power Distance Group
Democratic Bosses	Autocratic Bosses
Limited dependence on bosses	Considerable dependence on bosses
Decentralization of responsibilities	Centralization of responsibilities
Equality among workers	Inequality among workers
Less classes among workers	More classes among workers
Subordinates expect to be consulted	Subordinates expect to be told what to do

Rameezdeen and Udawatta, (2011)

Psychological safety

Edmondson, A.C. (2019). The Fearless Organization. N.J.: Wiley

- The need for people in the organization to feel safe to offer suggestions and opinions without fear of punishment, ridicule, or embarrassment
- A psychologically safe environment is one in which people feel free to voice their concerns, ask questions, be inquisitive and curious, and share ideas freely
- Leaders must acknowledge their own mistakes, ask for feedback and to encourage and welcome questions and suggestions from subordinates
- Fear, punishment or other repercussions from speaking freely or taking risks, being Interrupting and being blamed are counterproductive to psychological safety

- Creates and sustains a culture of awareness, objectivity, and operational reality
- Increase the probabilities of making good decisions
- Enhances the quality of relationships within the work unit
- Disagreement must become the source for curiosity and learning
- People must understand their **obligation** to you to speak up and share their point of view, especially on a sensitive subject

Promote constructive friction through the integration of perspectives, suspension of judgement and a portfolio of ideas and alternatives

Psychologically Safe Work-Place

- Encourages speaking up
- Enables clarity of thought
- Supports productive conflict
- Mitigates failure
- Promotes innovation
- Removes obstacles to pursuing goals for achieving performance
- Increasing accountability

**Prevents Group
Think**

Make a Note: “Remember understanding power distance”

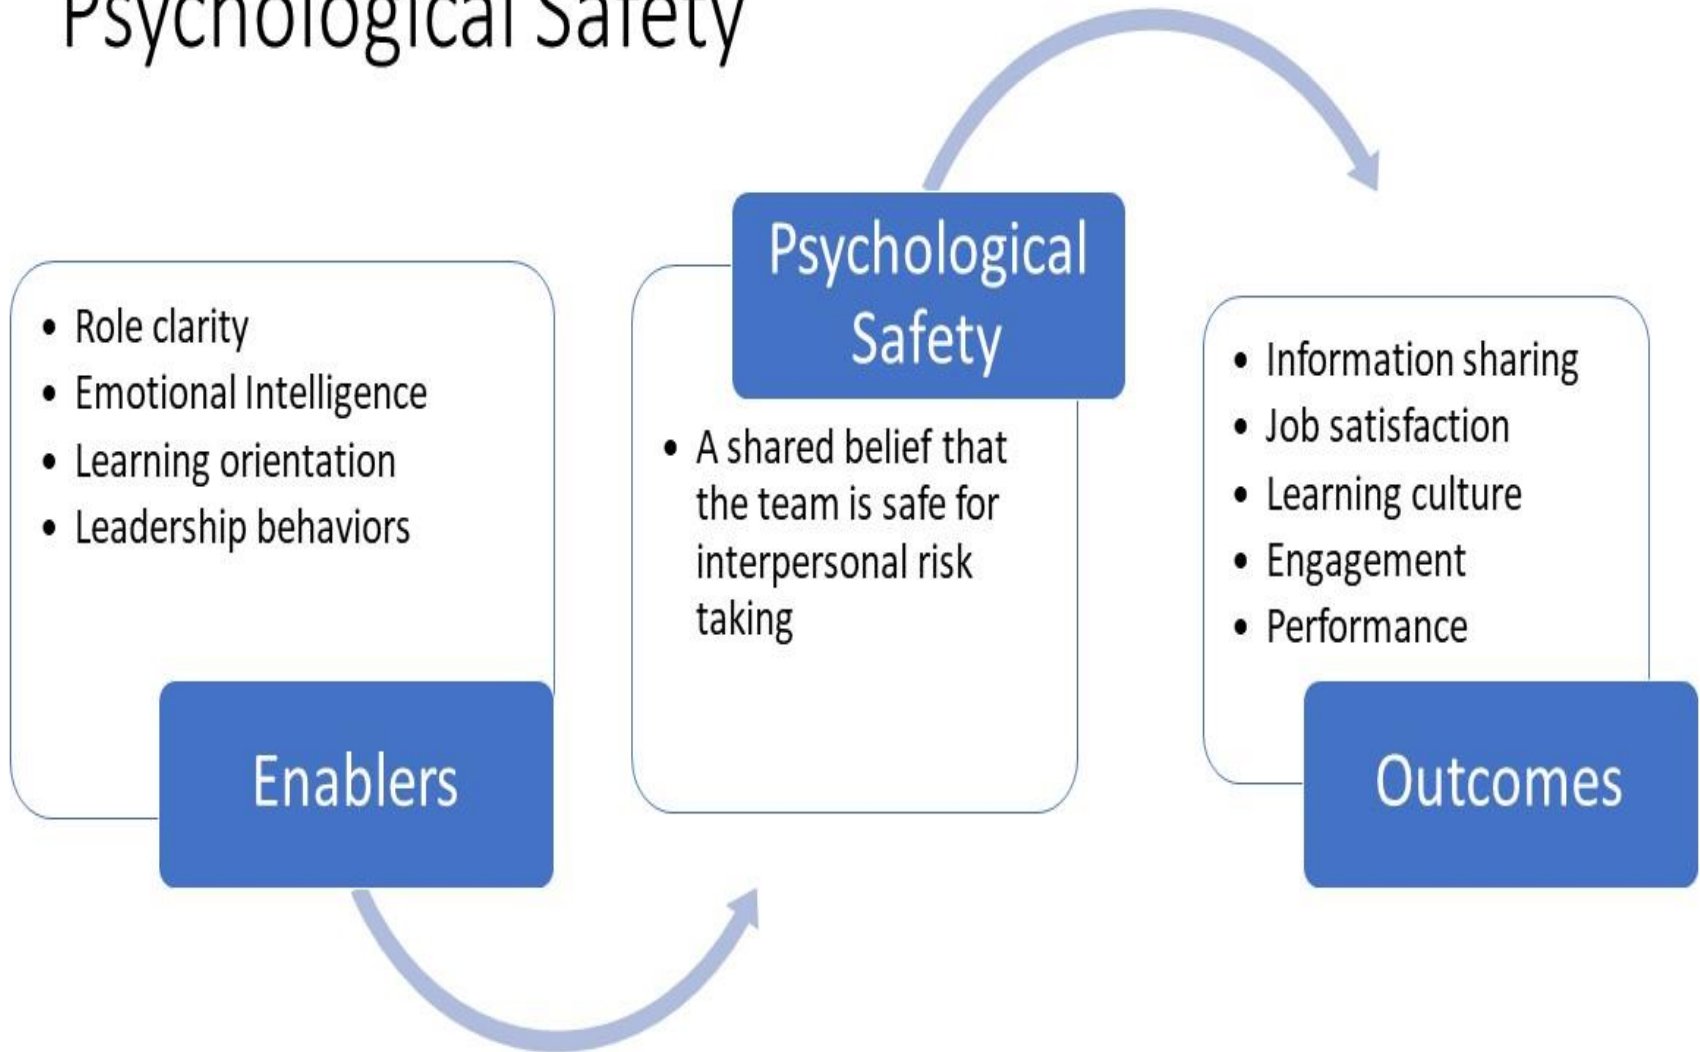

Embrace Mistakes to Build a Learning [just] Culture

Laker, (2023)

- Blame leads to finger-pointing, resentment, distrust, and unproductive behavior
- It can cause an organization to stagnate, with people feeling that their efforts are not valued
- In contrast, responding without blame creates an environment of learning and growth in which employees recognize that mistakes are part of the process and that their efforts are appreciated — a blameless culture

- Leaders in just cultures recognize that they are part of the system, so they take responsibility for their own mistakes — such as communicating insufficiently about an important issue or making a poor decision — and don't expect perfection of themselves or others
- **Accountability is engrained, operational realities are analyzed**
- This encourages employees to be open about their mistakes and use them as learning opportunities instead of hiding them in fear of retribution

Psychological Safety

Adam Grant ✓

@AdamMGrant

Loyalty doesn't require conformity.
If consensus is wrong, you have an
obligation to disagree.

Weak leaders demand deference.
Strong leaders welcome dissent.

Being a team player is not about
sacrificing your values for a group.
It's about acting in service of the
greater good.

Psychological Safety IS Being Able to

Give and receive feedback

Ask difficult questions

Raise issues and concerns

Ask for help

Disagree

Offer solutions to problems

Ask for clarification

Admit errors

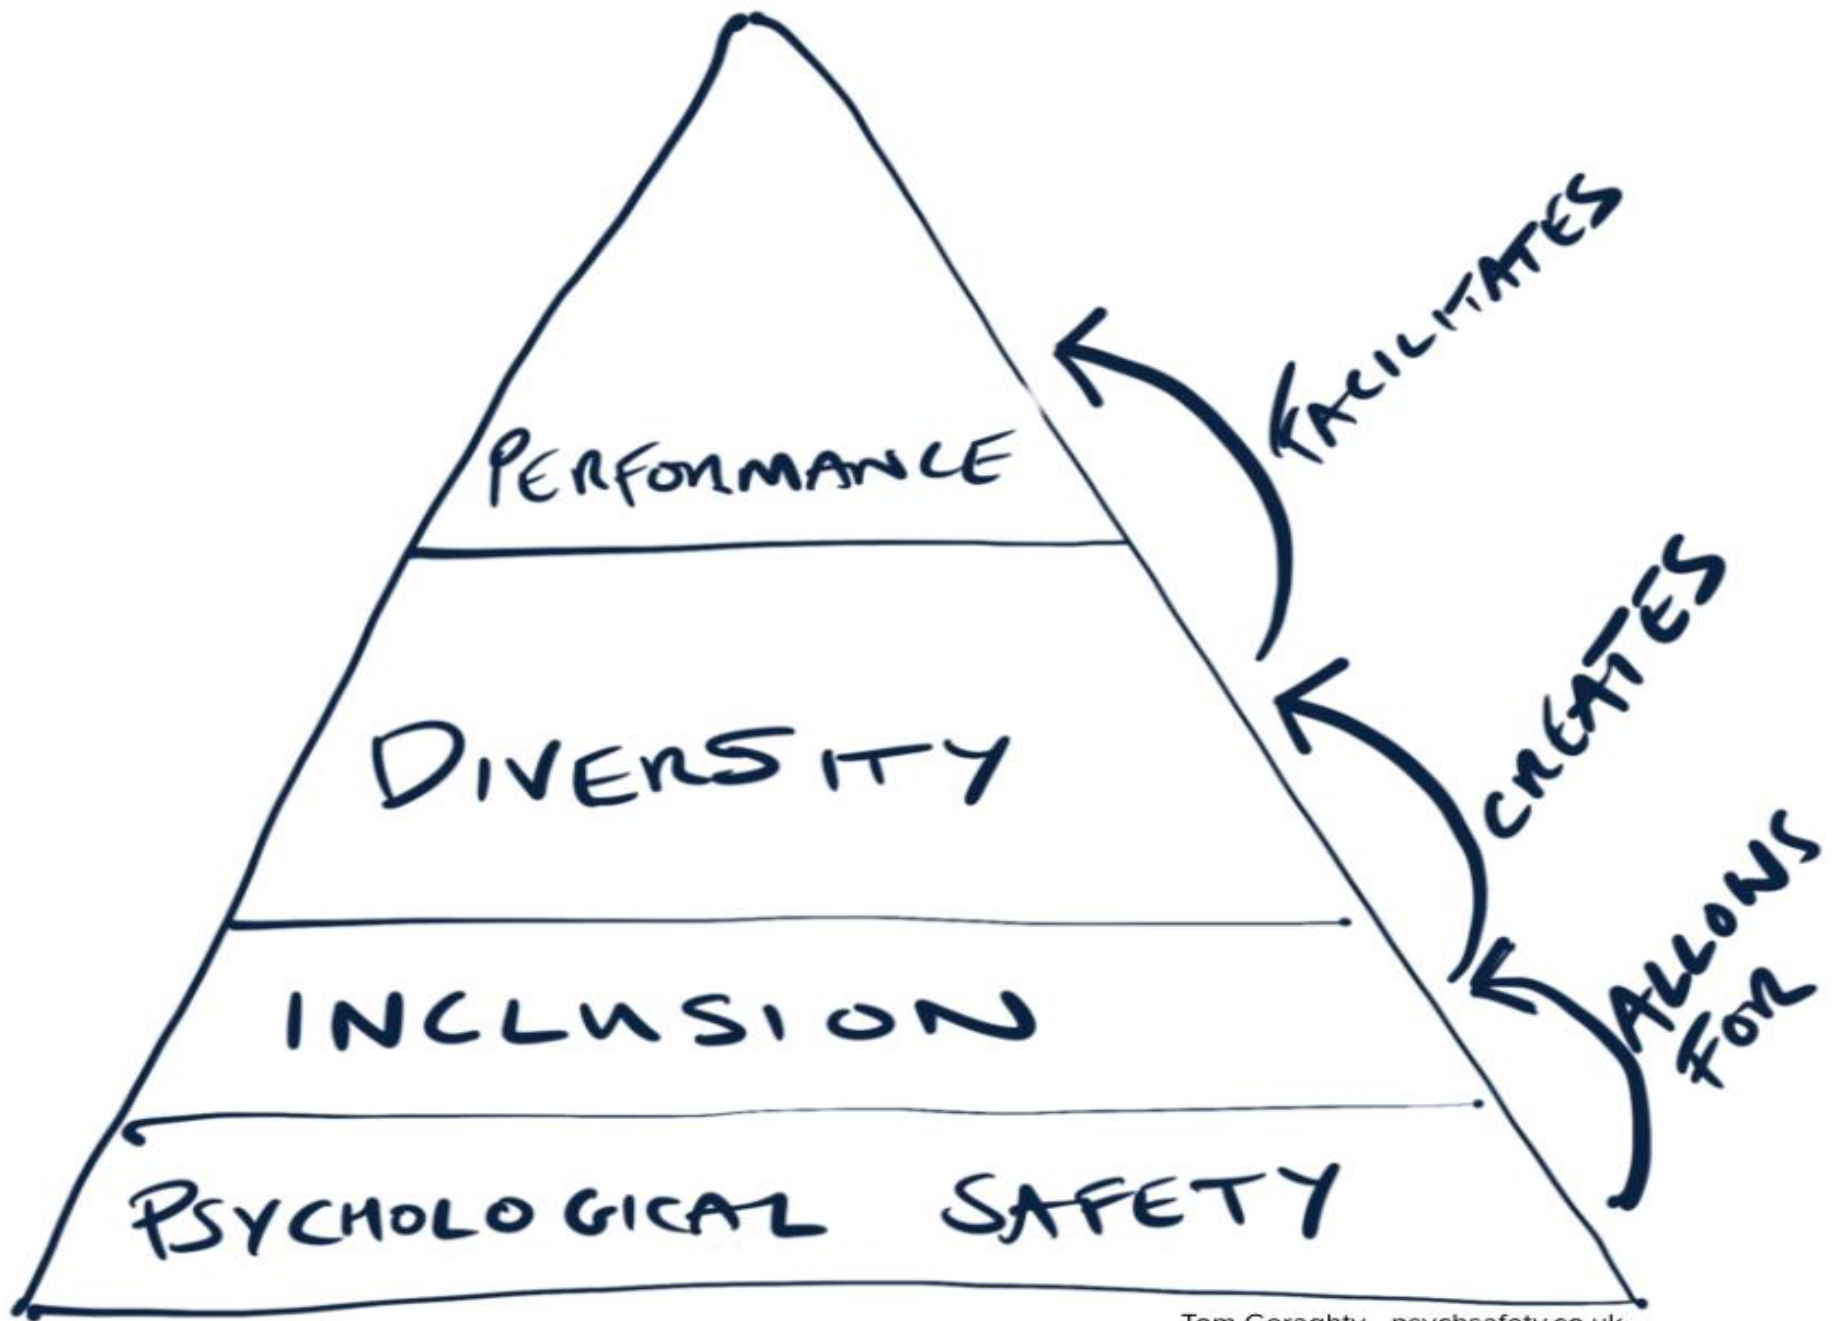

Studies Findings

Ashikali, T. (2023), Cao, Zhao & Zhao, (2023), Gil, Mosegui, Zenezi Moreira & Eguizabal, (2023), Jun, Wang & He, (2023), Nejati & Shafaei, (2023), Thabet, Badar, Aboramadan & Abualigah, (2023), Yasin, Jan, Huseynova & Atif, (2023).

- **Only leader humility and a flexible work culture are significant predictors of success as an inclusive leader**
- The psychological empowerment (an individual's perception of having control over their work, feeling competent and capable, and having a sense of meaning and purpose in their job or role) inclusive leadership develops, along with the trust employees have in their leadership, increases employee task performance

- It involves the activities and practices that enable individuals and teams to acquire, share and apply knowledge, ultimately leading to organizational learning and improvement

It does this largely through increasing psychological safety and creating a climate of innovation

Tom Geraghty - psychsafety.co.uk

<https://psychsafety.co.uk/about-psychological-safety/>

Leaders who proactively communicate, involve their teams in decision-making, and establish psychological safety create an environment where change is seen as an opportunity rather than a threat.

Safi, A. I. (2025)

Adam Grant ✓

@AdamMGrant

Leaders who refuse to hear criticism choose not to learn.

The higher you climb, the more people hesitate to challenge you. Silencing dissent is a step toward becoming a dictator.

A culture of voice begins with admitting gaps in your knowledge and rewarding those who speak up.

LEADER-MEMBER EXCHANGE (LMX)

Leader Member Exchange (LMX) Theory

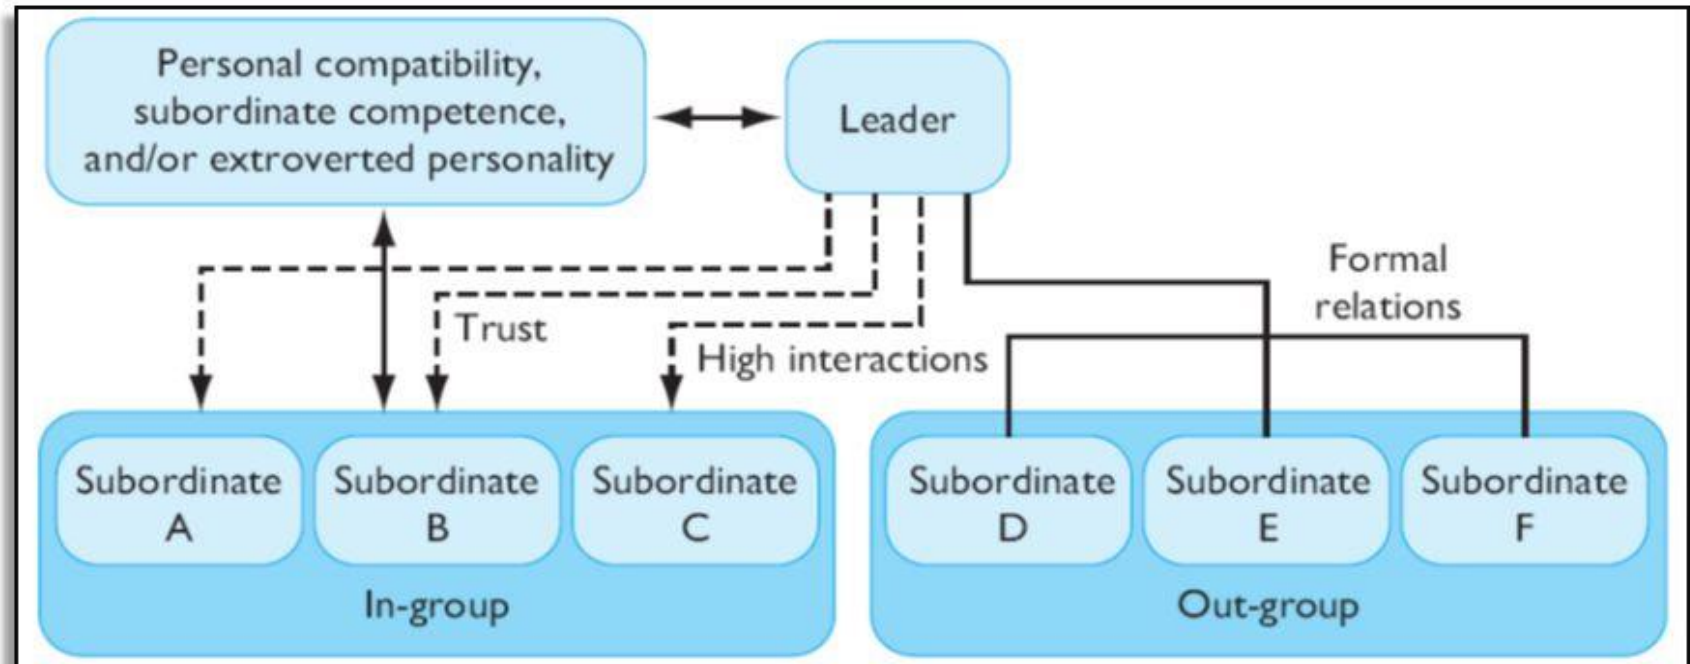

Graen & Uhl-Bien (1995)

How we evolve from stranger, to acquaintance, to maturity...

leader characteristics, follower characteristics, and interpersonal relationships

- The tendencies of leaders to develop “special” relationships with some team members. This tendency is central to leader-member exchange theory.
- The theory basically recognizes that in most, or at least many, leadership situations not everyone is treated the same by the leader. Instead, people fall into “in” groups and “out” groups in relationships with their leaders.
- Obviously, the group you are in can have quite a significant influence on your experience with the leader.

Leader-Member Exchange (LMX) Model

While the leader does the choosing, it is the followers' characteristics that drive the decision

[Key is awareness, fair process and proactive quality interaction in terms of time, content and context of relationships]

11-13

Diversity and authenticity at work

Adapted from Phillips, Dumas & Rothbard, (2018)

- Bonding around the work itself is powerful, especially for those who are collaborating across racial [gender] boundaries
- **We must be intentional about getting out of our comfort zones and connecting with people who are different**

The idea behind the Pygmalion effect is that increasing the leader's expectation of the follower's performance will result in better follower performance

Mitchell, Terence R.; Daniels, Denise (2003)

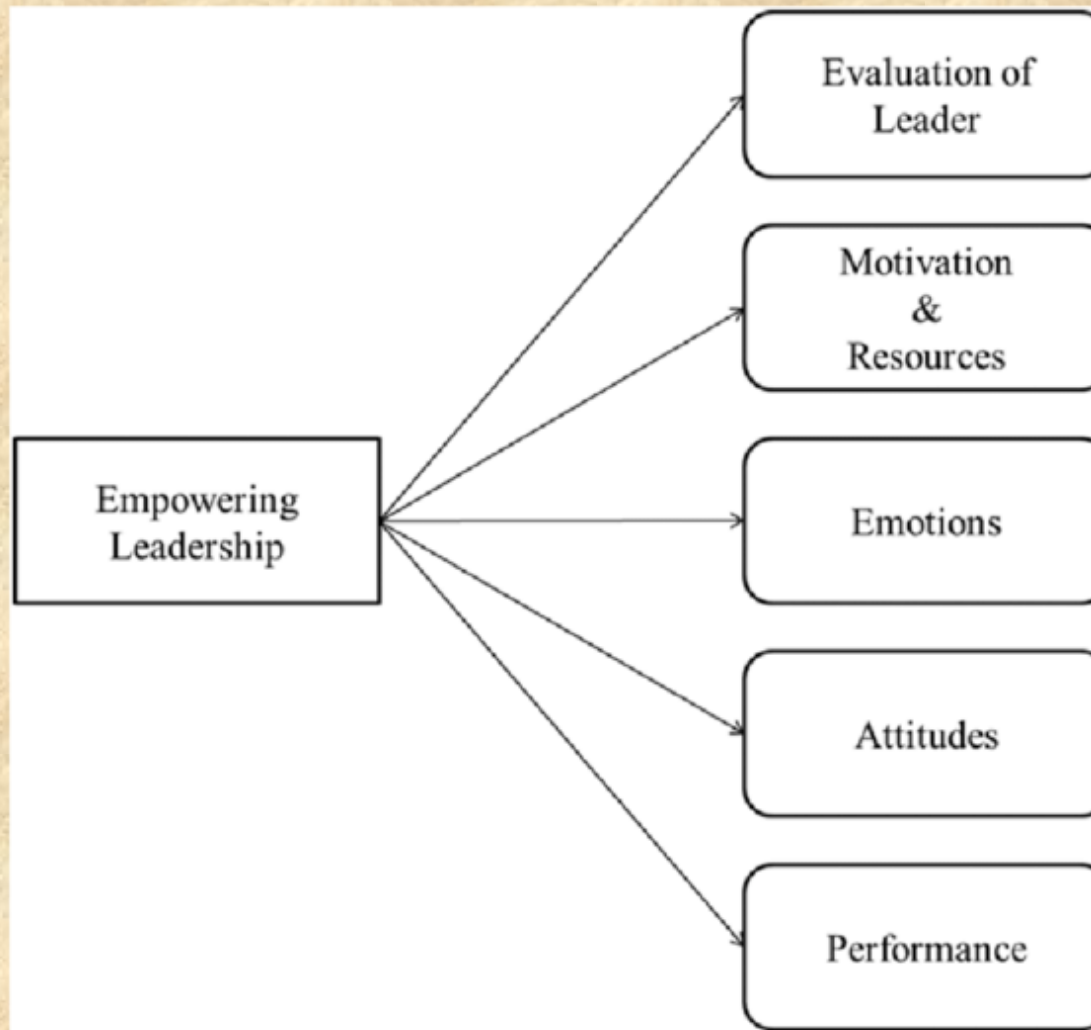

Good leaders empower by giving their power away and providing:

- Vision and direction
- Setting the standard
- Training to the standard
- Enforce (supervise) the standard
- Culturizing the standard
- Provide specific unambiguous expectations
- Give constant and ongoing mentorship and feedback
- Provide oversight

= Development and Capacity Building

+ Delegating the task and authority = Performance

Employee responses to empowering leadership: A meta-analysis

Kim, M., Beehr, T. A., & Prewett, M. S. (2018)

Humble leadership refers to a leader's willingness to acknowledge personal limitations, appreciate others' strengths and contributions and maintain an openness to new ideas and feedback

A fundamental challenge in organizations getting people to:

- Engage in voice behaviors or speak up about issues and contribute ideas and observations.
- Be honest and communicate openly, even when honesty may be uncomfortable.
- Act ethically and challenge unethical behavior or ideas of others.

Humble leadership is defined by the following characteristics

- **Self-awareness** - knowing one's own strengths, weaknesses and limitations.
- **Appreciation of others** - recognizing and valuing the unique contributions of team members.
- **Openness to learning** - demonstrating teachability and receptiveness to new ideas and perspectives.

- **Low self-focus** - maintaining a modest view of oneself and one's accomplishments.
- **The ability to admit mistakes.**
- **Seek genuine feedback for their own development.**
- **Maintain a focus on the greater good rather than personal advancement**

Practical Applications

Mohamed Ali, T., & Ahmed Ali Nemr, M. (2025)

- **Moral courage** in leaders drives positive group behaviors through humble leadership, suggesting organizations should prioritize ethical fortitude in leadership selection and development.
- **Humble leadership** significantly enhances group cooperation whilst reducing sanctioning and undermining behaviors, offering a powerful approach for improving team dynamics.
- **Organizational cynicism** severely undermines the positive effects of moral courage, highlighting the critical importance of addressing negative workplace climates.

- **Leadership development** should focus on both ethical competencies (moral courage) and interpersonal approaches (humble leadership) rather than treating them as separate domains.
- **Perceptions matter as much as behaviors** - how followers interpret leadership signals is crucial to organizational outcomes.
- **Contextual factors** significantly affect leadership effectiveness, suggesting one-size-fits-all leadership approaches are likely to fail.
- **Creating environments** where leaders can acknowledge limitations and demonstrate openness to feedback yields tangible group-level benefits.

- **Organizations facing challenges** with team cooperation should examine how leadership humility might be undermined by cynicism or other cultural factors.
- **Ethical leadership** drives practical business outcomes through specific mechanisms, dispelling the notion that ethics and performance are separate concerns.

Training programs should emphasize both moral courage and humble behaviors to maximize positive impact on group dynamics.

The Burden of Self-Awareness

So, why is self-awareness so important to a leader?

- It's more common to see leaders fail in the area of every day self-management — and the use power in a way that is motivated by ego and self-interest

Warrick, (2017)

- When summarizing the literature on why leaders fail, it is not what leaders know or how bright they are that leads to success or failure; [rather] it is how well they work with others and how well they understand themselves.

Burke, (2010)

- Most leaders and organizations fail to understand that 85 to 90 percent of all organizational problems are, in fact, largely due to dysfunctional systems and poor leadership

Deming, (2000)

The Human Dilemmas of Leadership

Harvard Business Review July-August 1963

By: Abraham Zaleznik

- **The main source for the dilemma's leaders face can be found within themselves, in their own inner conflicts**
 - Most of us are accustomed by virtue of our training and inclinations to externalize conflicts and dilemmas
 - If we become immobilized in the face of a difficult problem, we tend to look to the outside for an explanation
 - Subordinates not sharing information
 - Confused positions by subordinates
 - Mixed signals provided by subordinates
 - Frustrations on subordinate incompetence
- This generalized tendency to place conflicts in the outside world is part a mechanism of the mind called projection**

Often, we are our own worse enemy

- We must look in the mirror before we look out the window
- Qualified patience, confident humility, and seeking to understand before reacting
- Be able to objectively see, evaluate, and describe behavior and conduct (*It is never about the person*)
- Do not project blame, ensure accountability
- Be Strategic in our words and communications

We must learn to manage ourselves

As a leader we are responsible and accountable

THINKING ABOUT THOUGHT

Nisbett, (2015)

- The world is always a matter of construal— of inference and interpretation
- **Our judgments about people and situations, and even our perceptions of the “physical world, rely on stored knowledge and hidden mental processes and are never a direct readout of reality**
- **We navigate the future, based on our past**
- The situations we find ourselves in affect our thoughts and determine our behavior far more than we realize

Social Construction

Dugan, (2017)

- Does not naturally exist
- It is identified, named and understood based on the social interactions among people
[experiences that are shaped by social interaction]
- It is concreated in terms of meaning
- Social constructs often represent the taken-for-granted beliefs that function as powerful frames of reality
- Can be very difficult to change **[forms mindsets]**

Social Reality

Barrett, (2020)

- We mistake social reality with physical reality
- We (as humans) vary tremendously
- **We organize some of this variation into little boxes with labels (race, gender, nationality)**
- We treat these labeled boxes as if they're a part of nature when in fact we build them
- We, as a culture, choose the features of discrimination and draw dividing lines that magnify the differences between the group we call "us" and "them"

Internal and External Self-Awareness

- **Internal self-awareness:** how clearly, we see our own values, passions, aspirations, fit with our environment, reactions (including thoughts, feelings, behaviors, strengths, and weaknesses), and impact on others
- **External self-awareness:** Understanding how other people view us, research shows that people who know how others see them are more skilled at showing empathy and taking others' perspectives

Leaders must start by looking in the mirror before looking out the window...

- Our Culture
- Our Beliefs
- Our Attitudes
- Conformity Pressures
- Our Desire and Comforts

THE WAY WE THINK AND ACT

We must have the ability to be objective and see things in a different way...

Perception and Perspective

- **Perception:** How you perceive and understand the world; your interpretation from your perspective. *Experience, knowledge, and biases may factor into the overall equation*
- **Perspective:** The opportunity and ability to see and be aware of your surroundings. *The way you look at something.*
- *Perception is unique to a particular individual*
- *A Perspective where one observes the world from “outside themselves” presents a far more accurate interpretation of reality*

Emotion's factor into the equation

- Emotions are predictions (they are guessing your brain constructs in the moment)
- Emotions are built, not built in.

(Lewis, Haviland-Jones & Barrett, 2010)

- Feelings have direct nexus to our emotions
 - First come feelings...Second, is thought
 - We think what we feel
 - Feelings are not grounded in facts
 - Feelings take away our ability to become rational

We must strive to achieve and sustain objective reasoning over subjective feelings...

Our beliefs can

- Promote Subjectivity
- Cause Bias
- Create Assumptions
- Develop Mindsets
- Filter, downplay, or slant the information
- Promote intolerance
- Result in a closed-minded state

“We see through the prism we already have”

- We only know what we know and don't know what we don't know
- Who we are, where we have lived and who have been around shapes and molds our beliefs
- Practice is often guided by experience and what we have been able to “get away with”
- As a result, we must discipline ourselves to be able to see things in a different way
- **Contextual understanding is an ABSOLUTE requirement in today's leadership**

Therefore, our Angle of View or perspective is critical in our ability to lead

It all starts with us...

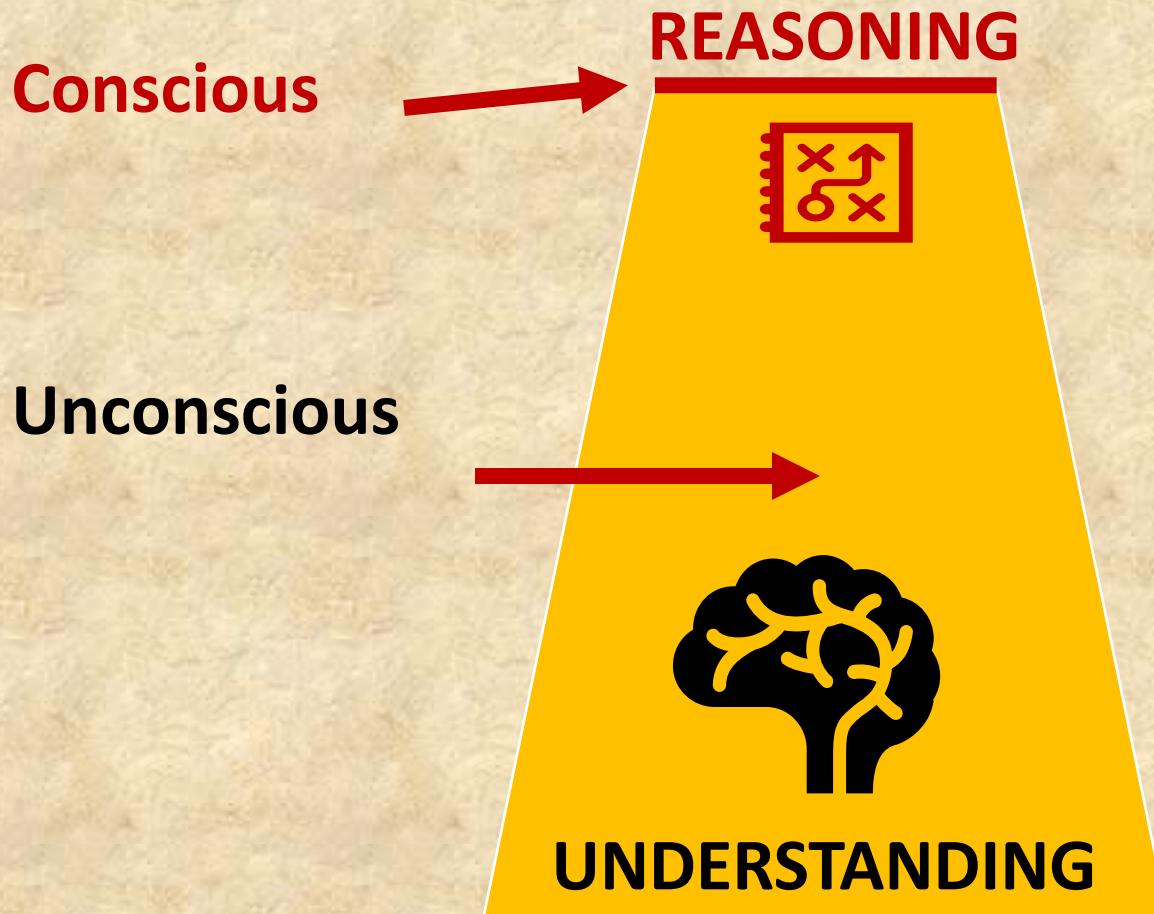

- How we see
- How we decide
- How we act.

Ongoing self-introspection and self-discipline is required to accomplish this process of objective assessment

Driven by a servant mindset where the leader is as much or more concerned about their subordinates and agencies situation as they are about their own situation

The brain spends 99.999+ % of its cycles on perception and understanding and less than 0.001% on reasoning.

(Monica Anderson IA Research)

“MEMORY”

Tavris & Aronson, (2015)

- Memories are reconstructive and subject to confabulation (*fabricated, distorted or misinterpreted memories about oneself or the world, without the conscious intention to deceive*)
- Recovering a memory is not like retrieving a file or playing a recording
- We experience “source confusion” where we can’t distinguish our actual memory from subsequent information that crept in from elsewhere
- To compound this fact, Brain science suggest our memories often alter or change each time we pull them up for reference. **Accuracy problems develop**

The brain recreates the past from Memory

- **Your memory is a critical ingredient in what you see**
- Our experiences, culture, and expectations cause us to view issues through different lenses
- Your brain searches through a lifetime of past experiences, issuing thousands of guesses at once, weighing probabilities, trying to answer the question...What is this most like?

**Perception is based in both awareness
and understanding.**

**“We often perceive what
we expect to perceive.”**

*“Sometimes we fail to see things as they are...we
tend to see them as we are.”*

---Screen play from none but the brave

**Premature conclusions can be dangerous and
froth with inaccuracies**

Social action, like physical action is steered by perception

Cabrera, Cabrera, & Powers, (2015)

- **Perceptions:** consist of a point (the vantage point or the “looker”) and a view (that which is seen or “looked at”)
- **Parts and wholes:** may have *different meanings* from *different points of view*
- **Perspectives** may be used to expand our thinking and include more option or to restrict our thinking and cause greater focus when necessary

When we change the way, we look at things, the things we look at change

THINKING,
FAST AND SLOW

DANIEL
KAHNEMAN

WINNER OF THE NOBEL PRIZE IN ECONOMICS

Pay Close Attention, GET READY

Dual Process Theory

(Stanovich, 1999, Kahneman, 2011)

- **System 1** - effortlessly originating impressions and feelings...main sources of the explicit beliefs and deliberate choices of **System 2**
- **System 1** is fast, intuitive, associative, metaphorical, automatic, impressionistic, and it can't be switched off
- **System 1** is the "secret author of many of the choices and judgments you make"

Dual Process Theory Continued

- **System 2** is slow, deliberate, effortful
- **System 2** Requires attention & is disrupted when attention is taken away. We tend to identify with **System 2** as our conscious reasoning self

System 1

- **System 1** is where our expert skills are
- Intuition is recognition without knowing that you know
- Skills begin to happen automatic
- Expertise grow in environment where we pick up on regularities, feedback and associations
- Creates a giant network of ideas in the mind
- Stimulus occurs and activates subsets, spreading activation prepares us for what comes next
- Associative machinery looks for causes

Dual Process Theory Comparison and Contrast

Understanding (S-1)

- Fast and automatic
- Rapid and parallel
- Associative
- Intuitive
- Subconscious
- Involuntary
- Effortless

Reasoning (S-2)

- Slow and controlled
- Step by step and often serial
- Rule based
- Reflective and logical
- Conscious
- Voluntary
- Effortful

Interacting “Hot” and “Cool” systems in our brain

(Metcalf & Mischel, 1999)

HOT (GO) System

- Emotional
- Simple
- Reflexive
- Fast
- Amygdala-centered (fear and reward)
- Develops early (birth)
- ***Intensified by stress***
(flight or fight)
- ***Stimulus-control***

COOL (KNOW) System

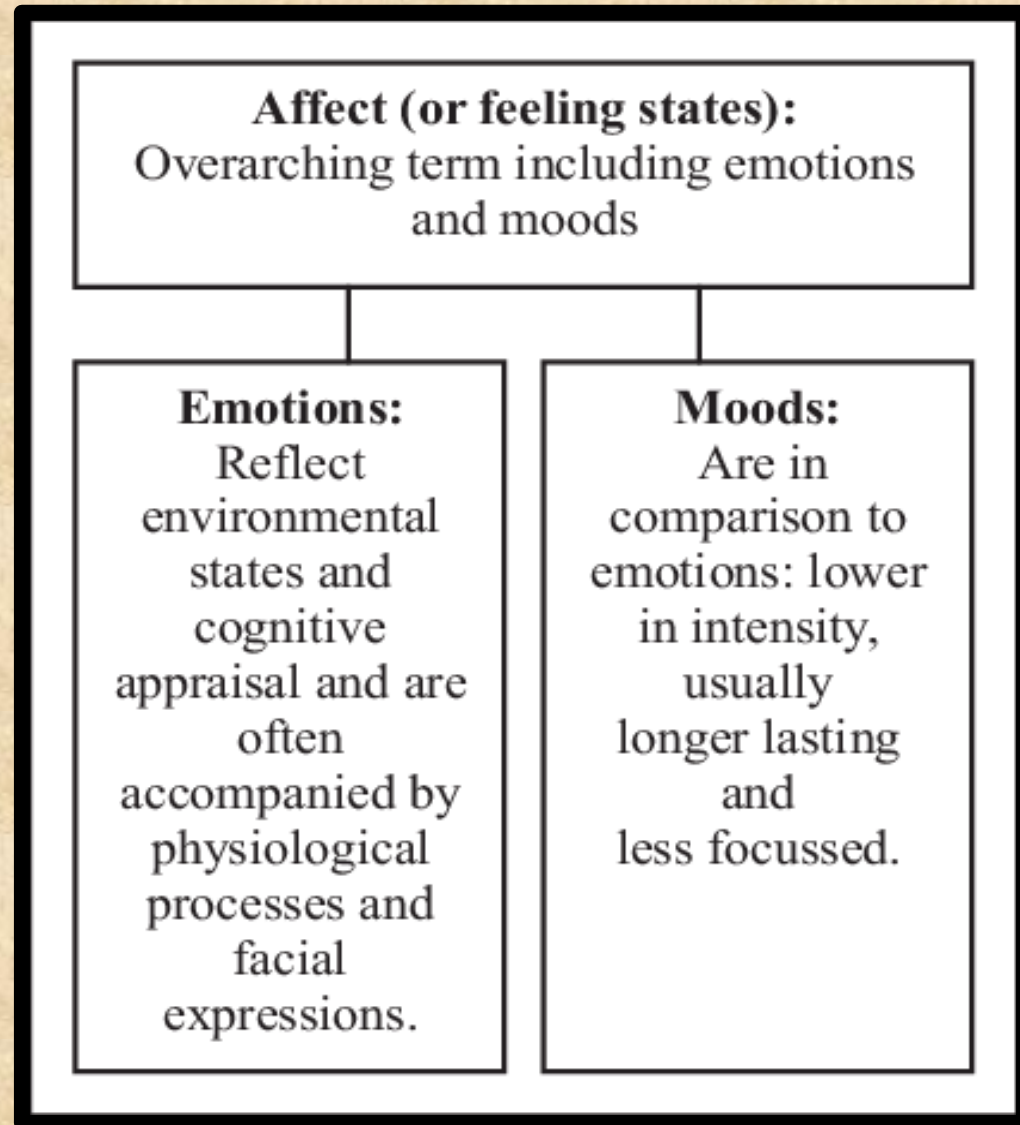

- Cognitive
- Complex
- Reflective
- Slow
- Frontal lobe/Hippocampus
(rational and logical)
- Develops late
- ***Weaken by stress***
(increases spur dysfunction)
- ***Self-control***

When one goes up the other goes down

Affect (Feeling) nexus to Emotion and Moods

Van den Tol, A. J., & Edwards, J. (2013)

	Emotions	Feelings	Moods
Duration	Short (seconds)	Moderate (minutes)	Long (hours or days)
Intensity	High	Moderate	Low
Causes	Specific responses to external stimuli (events, objects)	Mental reactions to emotions	The cause is often general and unclear
Effects	Immediate actions, fight or flight response	Decision-making, learning, memory, perceptions, attitudes, intentions	Behavior, psychological wellbeing, physical health

Source: Godovykh & Tasci (2021)

Emotions

- While our own emotions have a significant impact on our decisions and judgements
- **The displays of emotion by others around us also have an impact**
- **We have both cognitive and emotional (based on our values and beliefs) reactions to the emotional responses of others**
Wilkinson, D. (2024) Oxford-Review Research Brief
- **Emotion can modulate decisions in an incidental way, such as when a preexisting emotional state like stress or mood influences an unrelated choice**

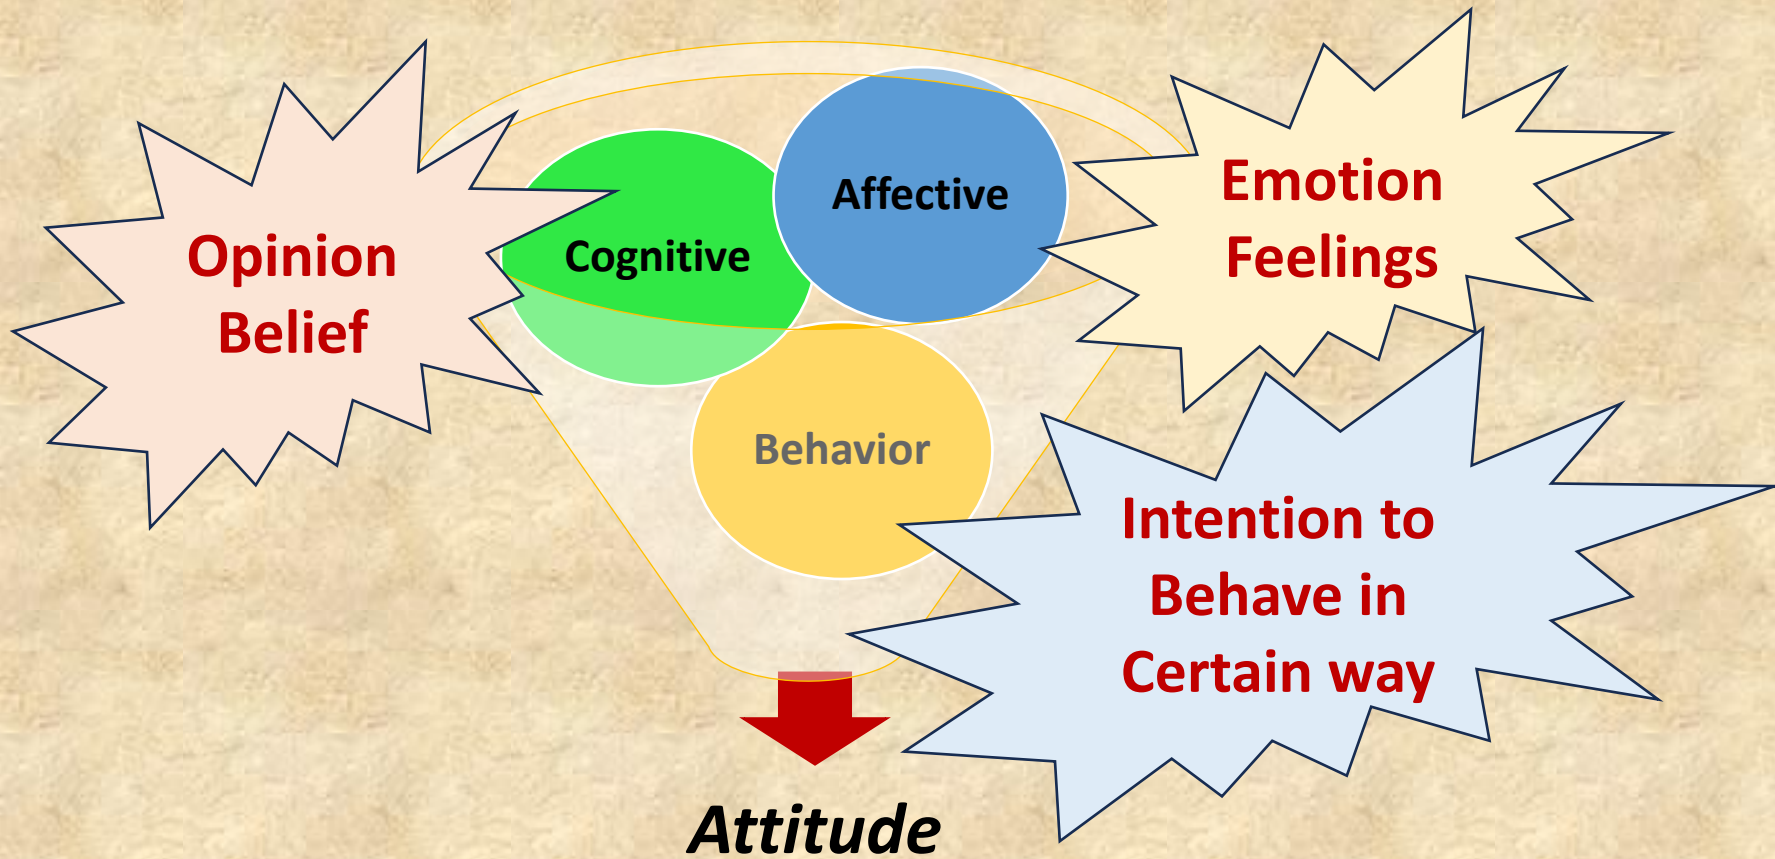

This modulatory view contrasts with dual-process models that propose separate, competing emotional and cognitive systems

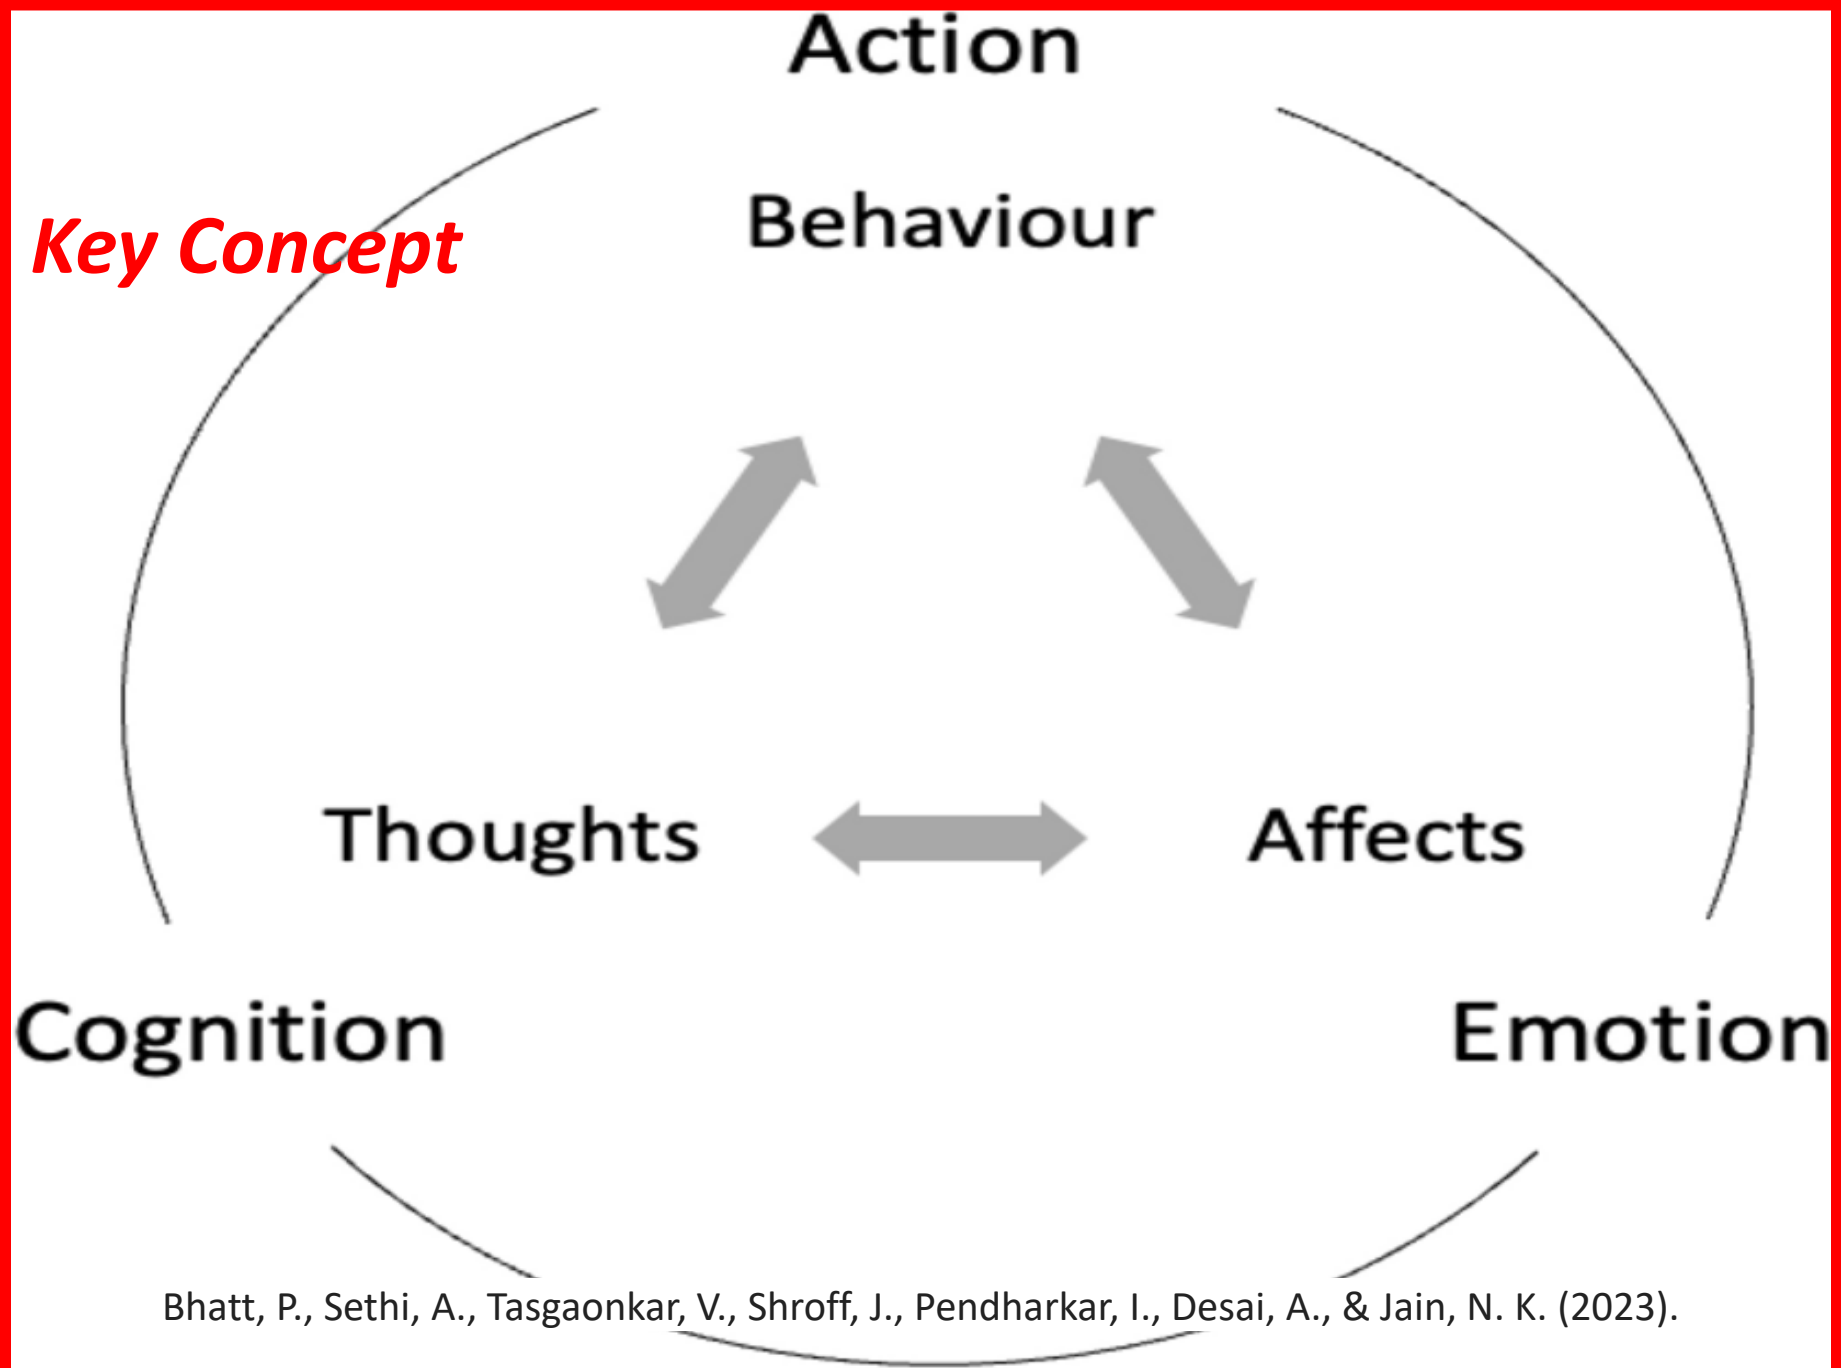

The modulatory relationship between cognition and emotion perspective

- A number of high-profile neuroscience studies have shown that brain regions involved in emotion are critical for decision-making
- Our neural circuits are what are termed multi-modulatory
- **They carry both affective (emotional) and cognitive information**

Deak, A. (2011), Phelps, E. A., Lempert, K. M., & Sokol- Hessner, P. (2014), and Van Den Oever, K., & Shropshire, C. (2024)

This means that emotions can be an integral part of the decision-making process

“Often, we don’t see things as they are, we see things as we are.”

The Modulatory relationship between cognition and emotion

- **Motivated reasoning:** refers to the tendency of people to conform their assessments of information to some existing pre-existing belief or ideology
- **Bias**

System 1 and 2

- **System 1** guides our *immediate* understanding of things (impulsive and intuitive)
- **Provides initial impressions that guide our beliefs** (Banana and Vomit---instinctual reaction)
- **Links associations that provoke other ideas it** (prefers simplicity)
- **Focuses on immediate environment** (looks for patterns decides what to find surprising and what to find normal...it also identifies dangers)
- System 1 creates a coherent story, even if one doesn't exist. Thus, we arrive at conclusions without even realizing it
- **System 2 is cautious and relies on reason** (agent of choice prefers logic and reasoning)
- **When system 2 is busy or depleted, system 1 reigns over reason**

Personalities of Systems 1 and 2

- **System 1** is extremely complicated, has innate qualities and learned...also can become highly skilled. Difficult to get control over
- **System 2** can be educated to take over. However, system two only knows what we know

The current theory is that these different systems were developed through human evolution over our history

NOTE

- We have only so much System 2 thinking available over the course of the day
- We naturally spend as much time in System 1 thinking as possible
- **Many studies indicate that 90% to 95% of our decisions are made unconsciously**

Birnbaum, J. (2022)

The interactions and relationship of system 1 and 2

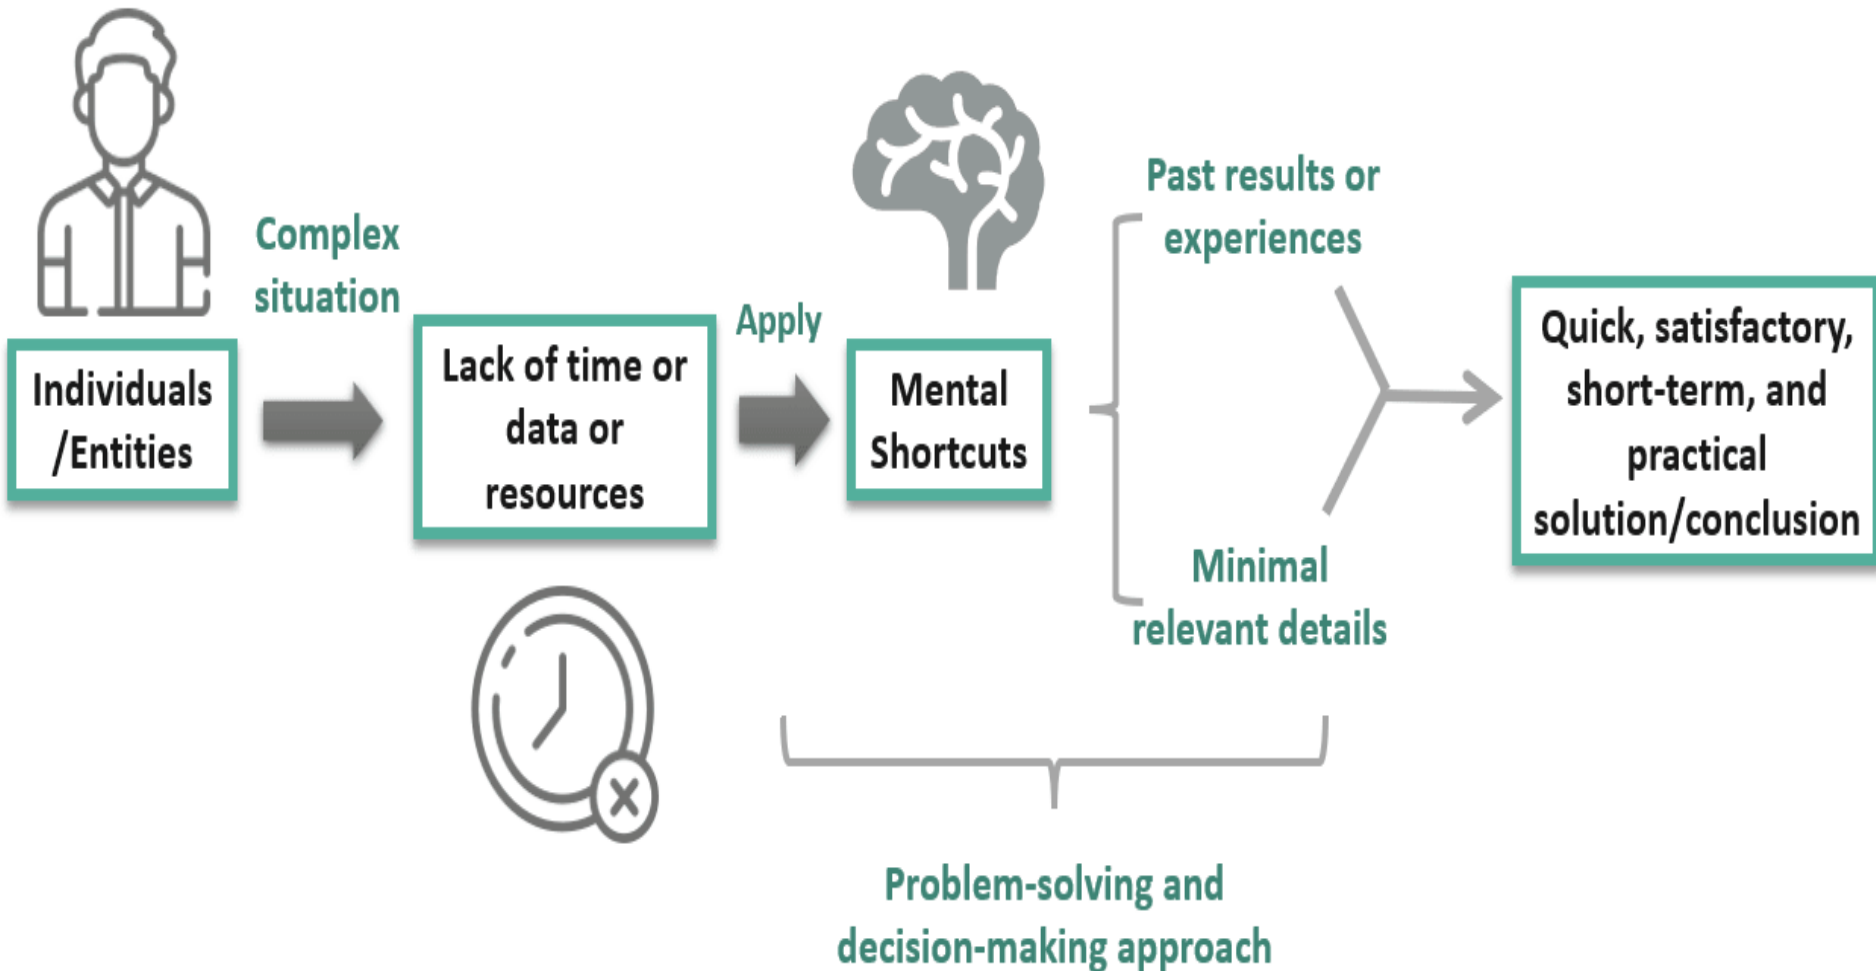

- Our brain has evolved short-cut mechanisms especially in the context of complex situations, where there is incomplete information and risk
- The brain samples what knowledge is available and then focuses on the bits most relevant to the task
- Then makes quick decisions based on “short cuts” or rules of thumb...(Heuristics) Kahneman, (2011)
- The brain is wired to know what’s going on by recognizing patterns in our world, formulating assumptions and developing mental models then predicting

Heuristics = “*Mental Short Cuts*”

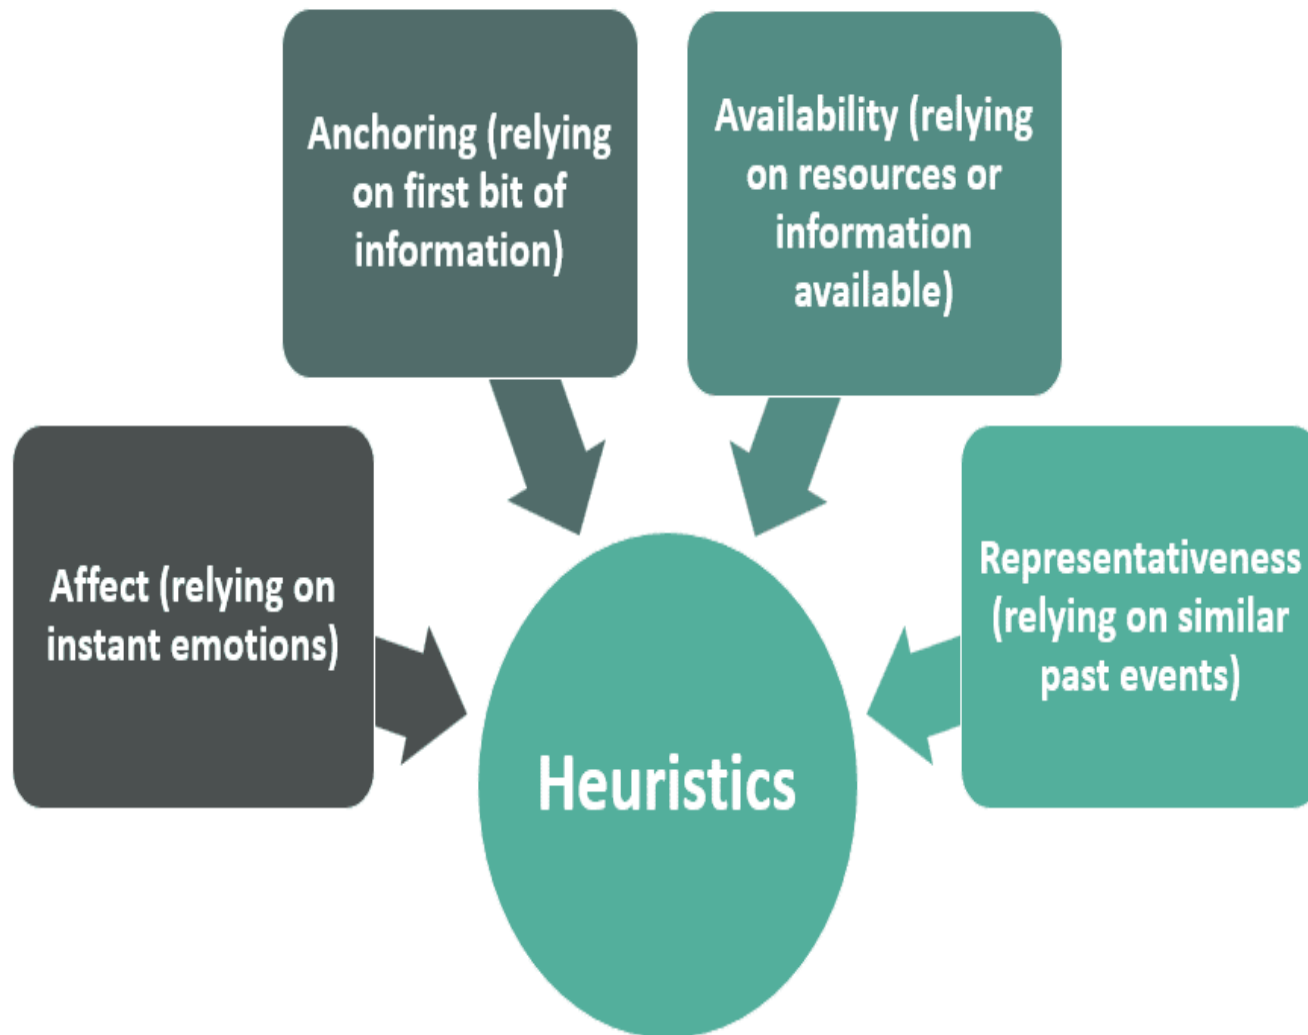

- When we use heuristics, we are using substitution (we substitute a “close enough” easy question, for the original hard one)
- They provide immediate answers, but may allow for serious errors

What Is Heuristics?

Heuristics Types

Research has Identified Several Conditions in Which Individuals are Most Likely to Rely on System 1

- Situations that involve ambiguous or incomplete information
- The presence of time constraints
- Circumstances where our cognitive control may be compromised such as fatigue or having a lot on our minds

Intuition is Recognition and Expertise

- Recognizing associations with patterns
 - Cues > Trigger > Sense making from contextual features to past patterns of experience and knowledge
 - The Brain predicts and constructs assumptions and realities from your experiences to make meaning
 - Evaluating the likely quality of an intuitive judgment requires an assessment of the predictability of the environment in which the judgment is made and of the individual's opportunity to learn the regularities of that environment
- Kahneman & Klein, (2009)

**FIRST
WE BUILD
OUR HABITS**

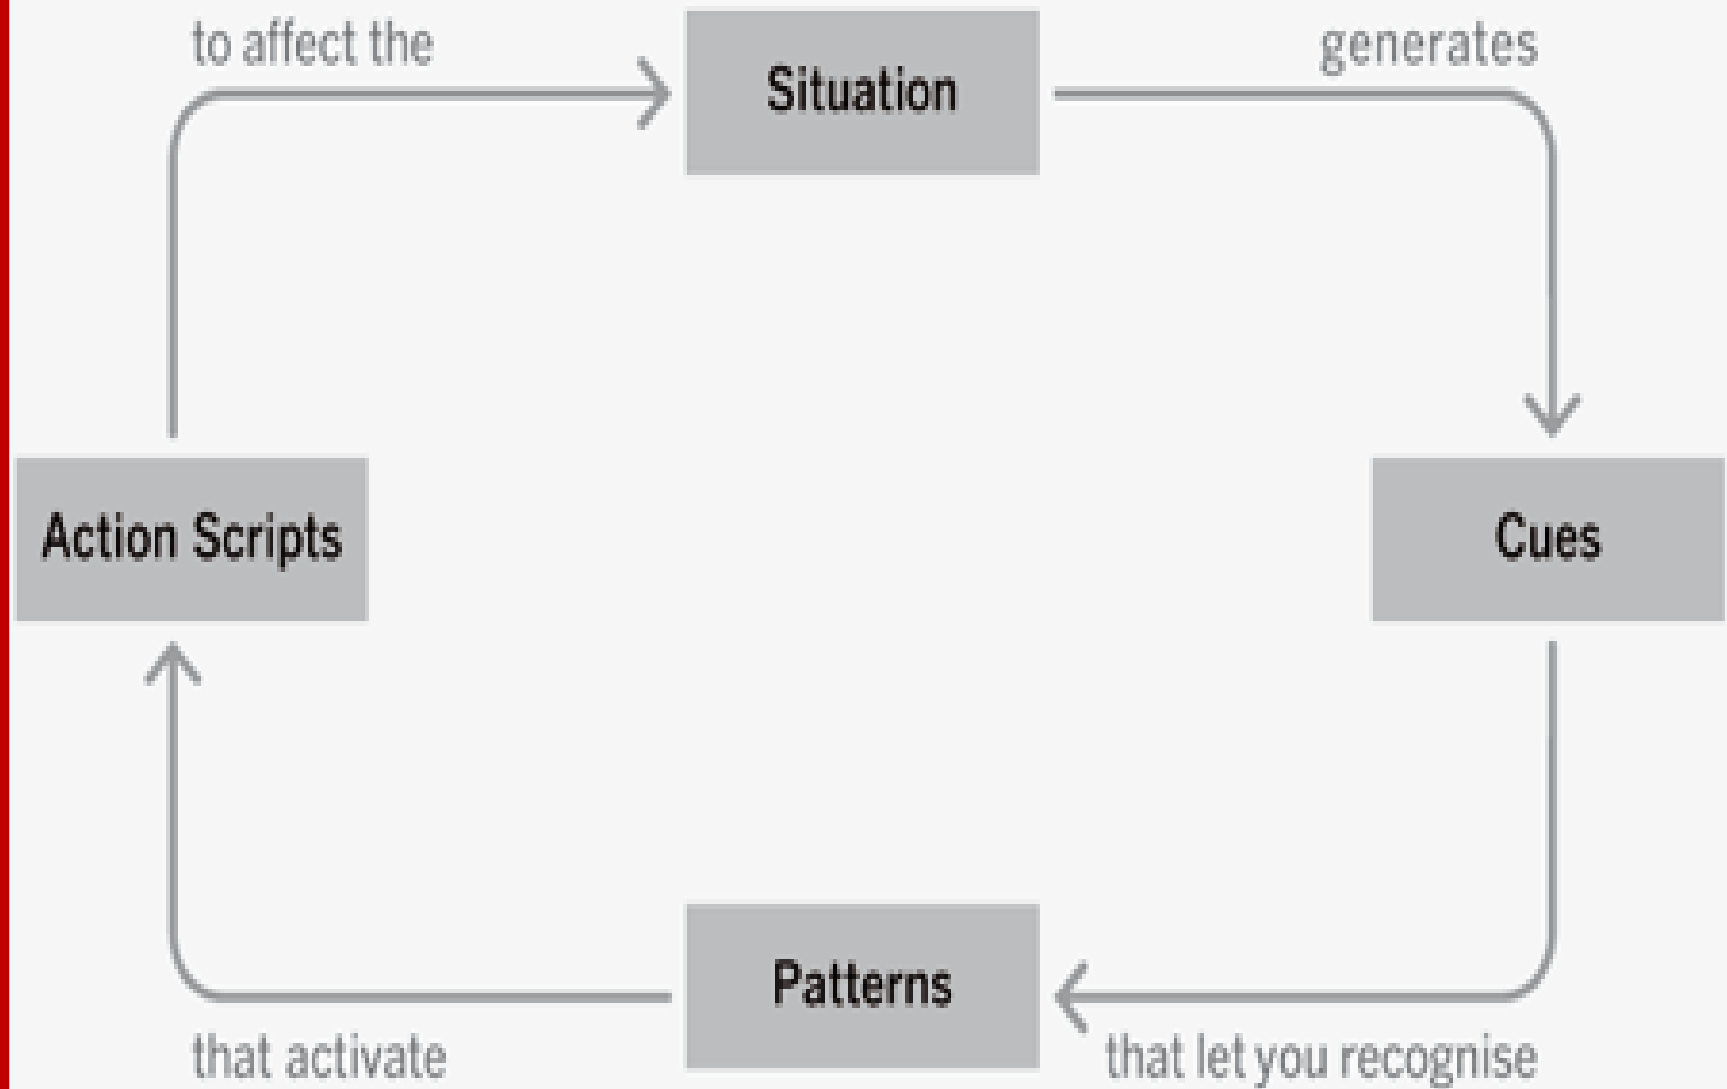

**SECOND
OUR HABITS
BUILD US**

Naturalistic Decision Making Under Exigent Circumstances

- Research found that experienced decision makers recognize patterns and don't compare options
- That insight arises by detecting contradictions and anomalies and by noticing connections.

Expertise primarily depends on tacit knowledge. (*gained through personal experience and intuition*)

“One way of looking at this might be that for 42 years, I’ve been making small, regular deposits in this bank of experience, education and training,” and one day, “the balance was sufficient so that I could make a very large withdrawal.”

---- Captain Chesley Sullenberger

● **Event:**

What is happening and is visible

● **Patterns + Trends:**

What has been happening over time.

● **Structure:**

What's influencing the patterns of behavior

● **Mental Models:**

What beliefs stimulate the behavior

What are Mental Models?

**What are Mental Models
made of?**

“Mental models are deeply held internal images of how the world works, images that limit us to familiar ways of thinking and acting. Very often, we are not consciously aware of our mental models or the effects they have on our behavior.”

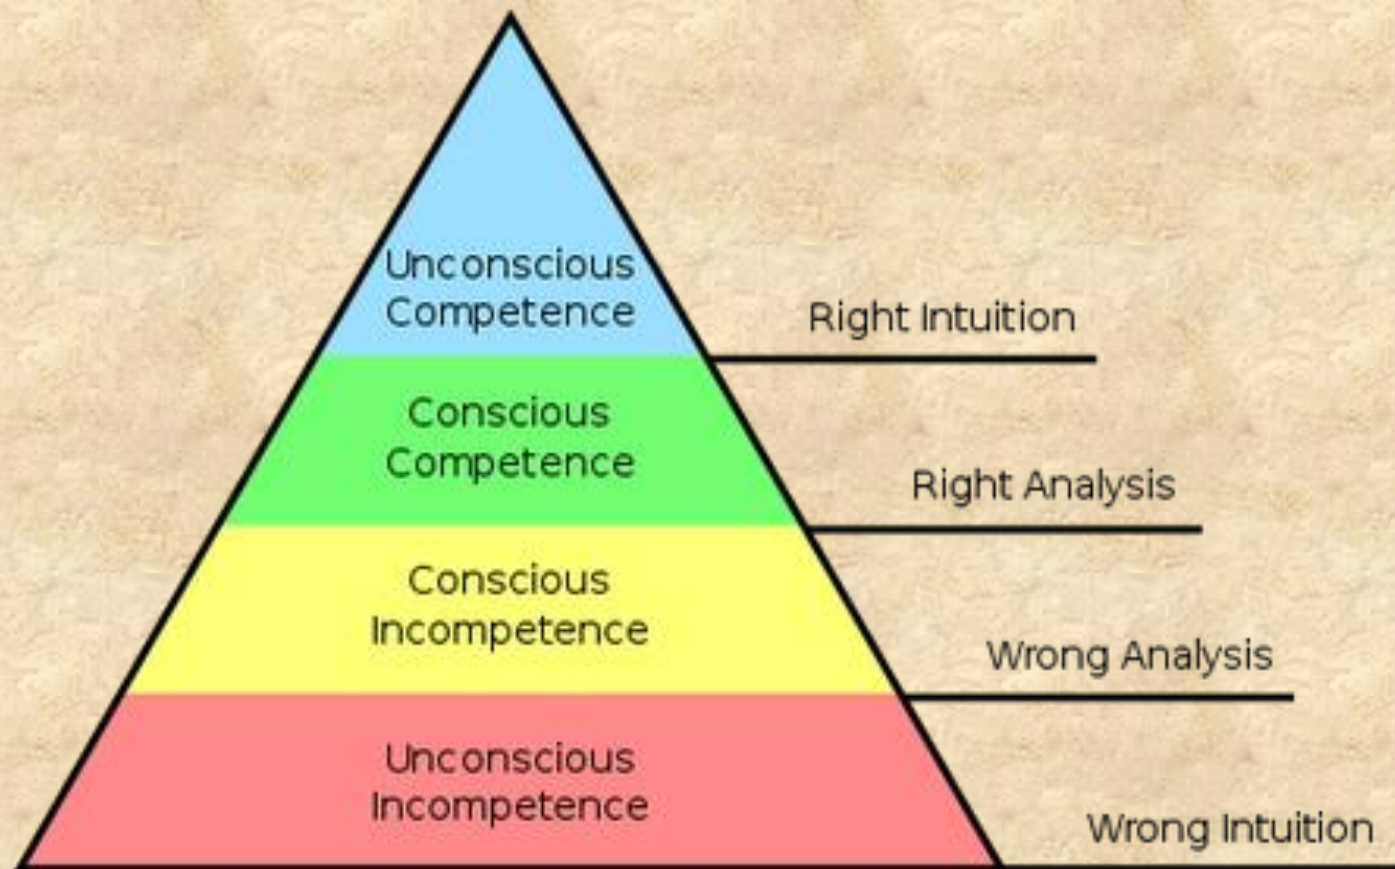

- Peter Senge

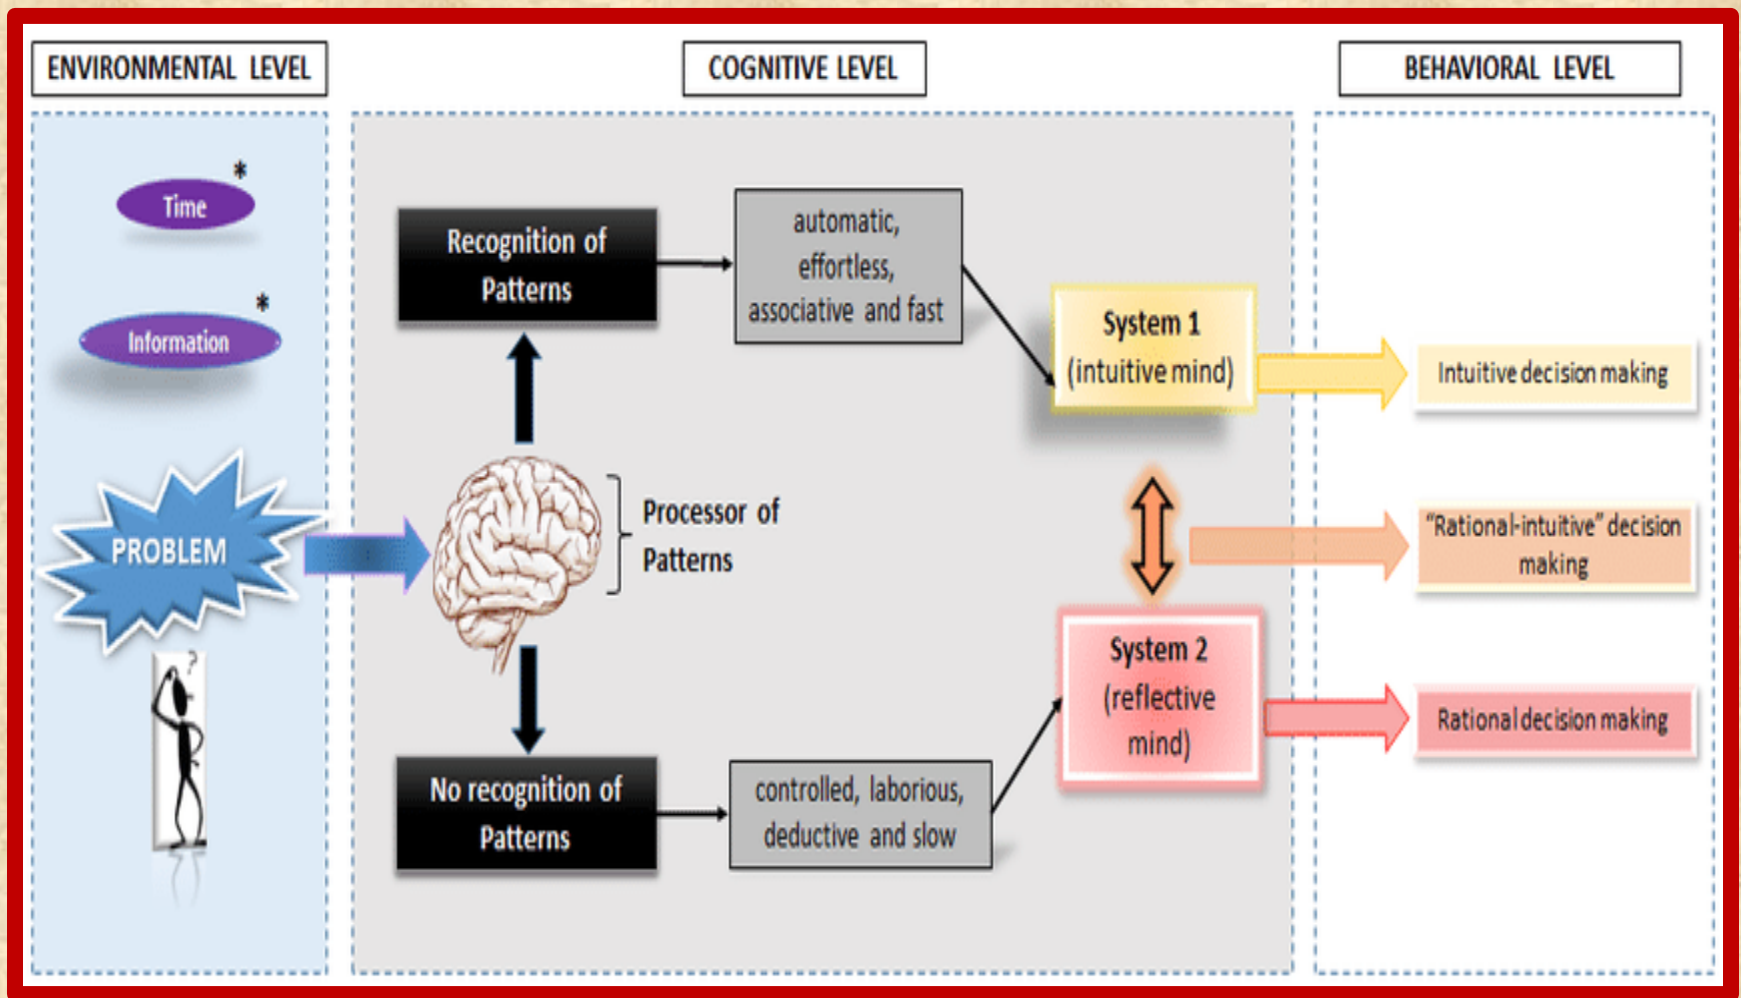

Colonel Hal Moore

Trust your instincts
Instincts and intuition
give you an immediate
estimation of a situation
SYSTEM 1

Then, ask yourself, what
am I doing that I should
not be doing
And what am I not doing
that I should be doing
SYSTEM 2

Hierarchy of Competence

Sincora, A.L. and Valadares de Oliveira, M.P. (2019)

PRACTICAL EXERCISES

These mental processes can create, produce, and develop

- Blind spots
- Misjudgments
- Biases

- ✓ *Many of our important beliefs are not derived from the contextual facts or evidence*
- ✓ *We are especially prone to ignore information that doesn't coincide with our worldview*

The Confirmation Bias

- ❑ Is a tendency to search for or interpret information in a way that confirms one's preconceptions, ideas or assumptions
- ❑ Actively seeking out and assigning more weight to evidence that confirms your assumption or theory, while ignoring or underweighting the evidence that could disconfirm your assumption or theory
- ❑ Favoring information that confirms previously existing beliefs or biases.

CONFIRMATION BIAS

Confirmation Bias vs. Belief Perseverance

Definition: *not bothering to seek out information that contradicts your ideas*

Benefits and downsides:
enables quick solutions, but misses finding out when first guesses are wrong

Definition: *holding on to your ideas over time, and actively rejecting information that contradicts your ideas*

Benefits and downsides:
less internal mental conflict, but more social conflict

The Sample Bias

- ❑ When we make assumptions about how things are perceived, function or results of limited information
- ❑ These assumptions are based upon the sample of information analyzed being too narrow and failing to represent the whole or entire facts as they relate to the issue
- ❑ Results can be erroneously attributed to the phenomenon under study

Explicit and Implicit Bias

Explicit bias is infrequent while implicit bias is pervasive

- Assumptions/attitudes slant how we see, remember, reason and judge
- Attitude is your evaluation of some concept about a person, place, thing, or idea
- An explicit attitude is the kind of attitude that you deliberately think about and report
- Implicit attitudes are positive and negative evaluations that occur outside of our conscious awareness and control.

Implicit Attitudes

Greenwald and Banaji (1995)

Beliefs developed from past experiences activated without conscious awareness that influence judgements and actions.

Stereotypical beliefs associated with certain group members automatically trigger a set of associations related to our attitudes

Automatic associations connected to a group act as implicit biases that influence judgements, perceptions and actions toward a group.

- **In the highly complex and uncertain environments in which many political and business leaders operate, reflex reliance on such compelling markers, without checking their validity, can have negative consequences** Bonabeau, 2003; Miller and Ireland, (2005)

- As critical thinkers we need to be aware of the processes that influence our judgements

Especially if they Bias us to be prone to errors

- By accounting for bias when evaluating a situation or someone's retelling of an event, we can make more accurate decisions, not so influenced by the mind's confirmation-seeking expectancies Kahneman, (2011).

Stereotypes

- Are acquired effortlessly and take special effort to discount
- Are all partly true and partly false
- Everyone uses stereotypes
- Valuable to our mental processes
- Allows us to categorize appropriately, are necessary for us to learn, understand, detect and recognize
- **They undermine our ability to perceive strangers as distinct individuals**
- **Cause discrimination by acts of omission and commission**

Dangers of Stereotypes

- **Robbing people of their individualism and dignity**
- **Unfair treatment of people**
- **Self-fulfilling prophecy:** Behavior in which one's inaccurate expectations about a person's behavior prompt stereotype consistent behaviors
- **Stereotype threat:** When people are aware of a negative stereotype about their social group, then experience anxiety that might confirm the stereotype, undermining their performance

Cognition

Our attitudes, values, beliefs
and emotions

Filter our perspective,
perception and
interpretation

Cause Bias that
"The birth of an expectation"

Due to lack of specificity in
information and incomplete
frame of reference

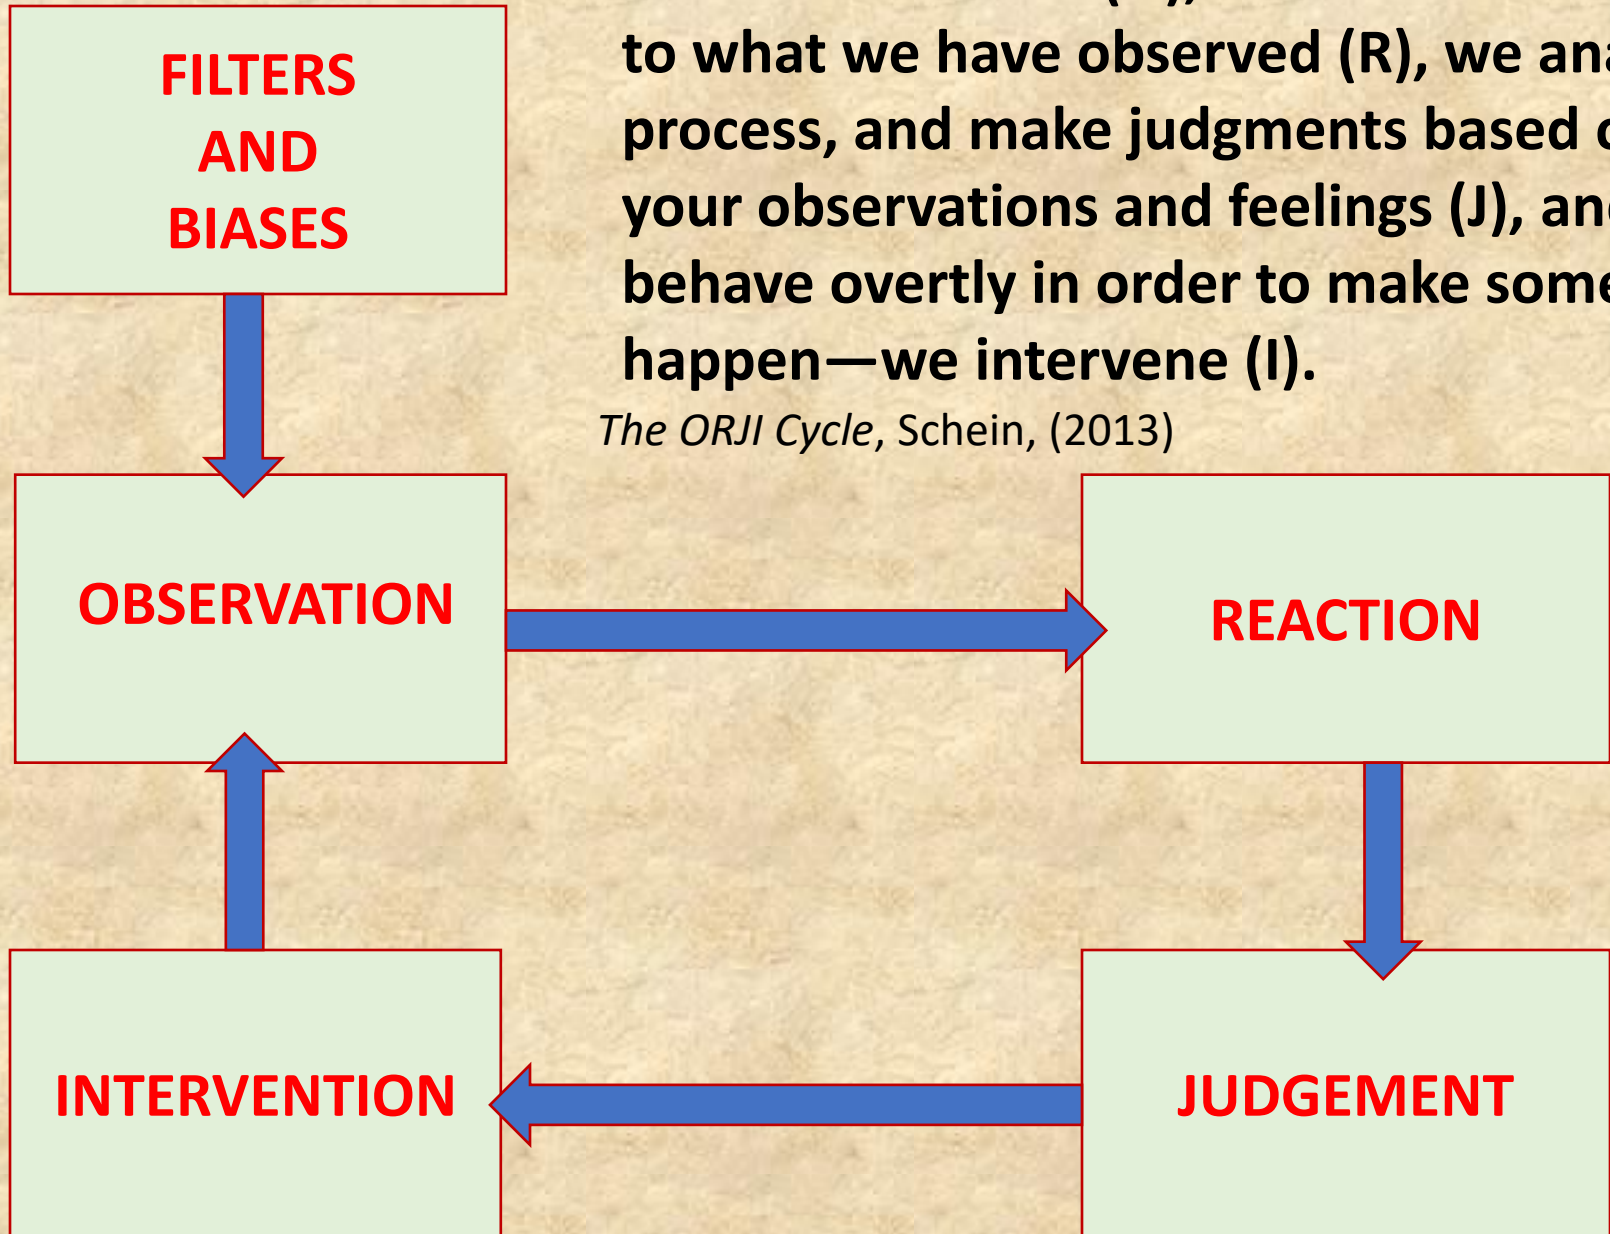

Can cause subjective
treatment

What we observe (O), we react emotionally to what we have observed (R), we analyze, process, and make judgments based on your observations and feelings (J), and we behave overtly in order to make something happen—we intervene (I).

The ORJI Cycle, Schein, (2013)

- Economists, Sociologists, and Psychologists have confirmed time and time again that the social group to which a person belongs can be isolated as a definitive cause of the treatment he or she receives
- We fail to perceive individuals as individuals, they are often viewed as representatives of social groups
- **Race, ethnicity, age, gender, religion, class, sexuality, disability, physical attractiveness, profession and personality are all stereotyped**

Important Perspective

- [Leaders] tend to believe that unconscious bias only happens sometimes and is not a constant influence on decision-making and behavior
- [Leaders] need to understand nature of unconscious bias, as it is a constant influence on our decision-making, and not just in social or specific contexts
- [Leaders] should approach it from the perspective of cognitive bias, rather than highlighting a specific bias

Osman, M. (2021)

Ignorance and “unintentional” bias can shape how we interact, predict, judge and react to people

Such creates mindsets, develops attitude and shapes thought that translates into behavior and conduct

Its all about how we:

Frame: See, process, interpret and understand

Name: Describe, identify and label

Blame: Hold responsible and culpable

We then tend to amplify, magnify, distort or disregard information

THE QUESTION

Why is it important for leaders to learn about Dual Process Cognition, the modulatory relationship between cognition and emotion, and Implicit Social Cognition?

The influence on our three (3) primary roles

Mintzberg, H. (1973). The Nature of Managerial Work. New York: Harper & Row.

- 1) Processing Information:** monitoring the internal and external environment for important and new information, much from staff members and the dissemination of information (mostly informal)
- 2) Interacting with others:** interpersonal skills
- 3) Making Decisions:** handling disturbances and conflicts, allocation of resources and negotiations

Drivers of a Leaders Self-Development

Nesbit, P. (2012)

□ **Three interrelated meta-skills** (*skills which either apply broadly to a wide set of problems, or help you acquire other more specific skills*) **that enable the gaining of more skills**

- Self-awareness
- Self-reflection
- Self-regulation

The way we think informs the thinking we do.

Two Key Questions

**Am I present in the
moment?**

**How conscience am I about
ME in the MOMENT?**

The Concept of “Use of Self.”

Three Core Competencies

- **Seeing:** Taking in information about self (from other perspectives and particular context involved)
- **Knowing:** Making meaning from interpreting information
- **Doing:** Taking appropriate action based on seeing and knowing

Your Agency is Critical

How do we Practice this Concept

- Continuous self-reflection and self-assessments
- Seeking and integrating feedback from others
- Experience learning through practice and challenging situations
- Expanding one's repertoire of skills and behaviors
- Deepening self-awareness and emotional intelligence
- Integrating personal growth with professional development

Common Across the Research

Use of Self Research Briefing September 2024

www.Oxford-Review.com

- **Cultivate Self-Awareness (Know Yourself)**
- **Develop Situational Awareness (Understand the Context)**
- **Practice Intentional Self-Regulation (Control Your Reactions)**
- **Act in Alignment with Your Values (Values-Based Actions)**
- **Use Selective Self-Disclosure (Build Trust)**
- **Engage in Continuous Reflection and Learning (Assess your Impact)**
- **Apply the Framework in Real Time (Practice and Adapt)**

Use of Self Framework

- **Self-Awareness:** Know strengths, weaknesses, values, and emotional triggers
- **Situational Awareness:** Understand the context and the needs of others
- **Intentional Self-Regulation:** Manage reactions, especially in high-stress situations
- **Values-Based Actions:** Develop core values and act in alignment with them (understand other's values and agency mission)
- **Selective Self-Disclosure:** Build trust by sharing appropriate personal insights
- **Continuous Reflection:** Regularly assess how your personal attributes influence your impact

In our craft, It is tremendously important to remember how other people see reality

- Often, people see reality totally different than each other...
- People can see the same things and come to entirely different conclusions
- People often do not see what we see or what we expect them to see...
- People see reality different based upon their different views, education or lack there of, cultures, beliefs, biases and feelings.

What really is the reality and who's reality is it?

THE YALE LAW JOURNAL

Will Putting Cameras on Police Reduce Polarization?

Sommers, R. (2016)

- Findings reported here suggest that video evidence **remains susceptible to biased interpretation**
- In deciding factual matters about what happened—such as whether a weapon was present, whether physical force was used, whether the citizen complied with the officer's **requests—fact finders reviewing video footage brought their prior attitudes toward the police to bear on their judgments.**
- In deciding more subjective matters—such as whether the citizen posed a threat, was likely armed at the time, or was resisting arrest—**viewers again relied on their level of identification with police.**

**So, how much of the problem is defined by
the fact we all are:**

HUMAN BEINGS

- We lack self-awareness, objectivity, values, and self-discipline
- The fact that often, we may be our own worst enemy
- We suffer from our own bias, ignorance, lack of objectivity, training, poor supervision, mentorship, and oversight
- We don't observe, study, research, and learn regarding the operational realities around us

NOW...LET'S TALK ABOUT LEADERSHIP

Daniel Goleman

- Great leaders move us
- They ignite our passion and inspire the best in us
- When we try to explain why they are so effective, we speak of strategy, vision, or powerful ideas, BUT...
- **It is much more primal, great leadership works through the emotions.**

Emotional Intelligence and Social Intelligence

- Emotional Intelligence focus is on a crucial set of human capacities within an individual, the ability to manage our own emotions and our inner potential for positive relationships.
- Social Intelligence the picture enlarges beyond a one-person psychology—those capacities an individual has within—to a two-person psychology: what transpires as we connect.

Social Intelligence

Daniel Goleman

Social intelligence can be organized into two broad categories:

- **Social awareness:** what we sense about others—
- **Social facility:** what we then do with that awareness.
 - ❑ Being fully present
 - ❑ Getting “In Synch”
 - Understanding how people feel and why
 - Interacting smoothly to move people toward a positive state

Social intelligence

Knowing, feeling, and responding compassionately

Working to understand another's perspective

- **Perspective taking:** the mental act of perceiving a situation from another individual's point-of-view.

“Putting yourself in another person's shoes”

Empathy is Key

- Leads to maintaining the appropriate mindset that informs the way we judge, engage, and treat people
- Provides a secure base for subordinates

The Tremendous Importance of Empathy

- Empathy is defined as an individual's “sensitivity to the emotional experiences of another”

McNeely & Meglino, (1994)

- It emerges when we accept, acknowledge, and feel how others are feeling
- Empathy makes people feel they are seen, understood, and connected
- And refers to the psychological process that allows an individual to experience feelings that are congruent with the situation of another person
Hoffman (2000)
- **Empathy allows rapport between people, as a property that emerges from their interaction**

The Critical Concept of Emotional and Cognitive Empathy Merging Together

Emotional Empath

- Shares emotionally the experience
- Feels distress in response to someone's pain
- Feels a willingness to help someone in need

Cognitive Empath

- Takes another person's perspective
- Imagines what it's like in another person's sandals
- Seeks to understand someone's feelings

251

Leadership is about the relationship between the leader and the people around him or her

Boyatzis, (2012)

- The best leaders build or rebuild resonant relationships
- These are relationships in which the leader is in tune with or in sync with the people around him or her
- **Resonant leadership is common sense, but not common practice**
- The key lies in the leaders' competences of “emotional and social intelligence” - how leaders handle themselves and their relationship.
- Good leaders drive the emotions of those they lead in the right direction

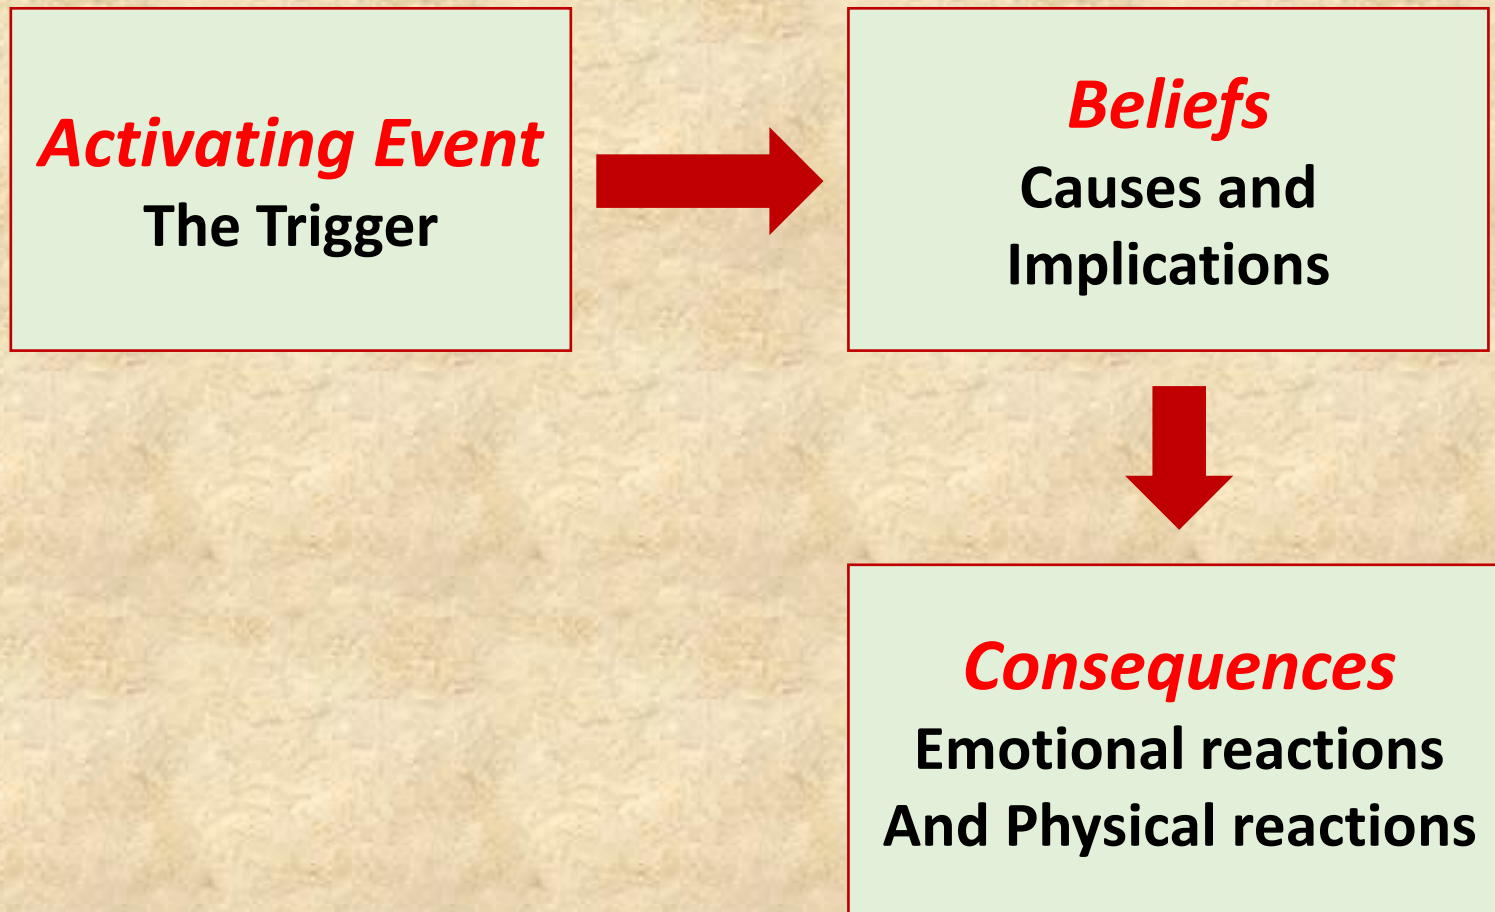

- When leaders fail to empathize with or to read the emotions of a group accurately, they create **“dissonance.”** (off key, lack of harmony)
- When leaders are attuned to people’s feelings and move them in a positive direction speaking authentically from their own values and resonating with the emotions around them - creates **“resonance.”** (in sync, in tune, in harmony)
- Resonance comes naturally to an emotionally and socially intelligence leader... their passion and enthusiastic energy resounds through out the group.

- The **Emotionally Intelligent and Socially Intelligent Leader** not only empathizes with emotions but expresses them reinforcing synchrony and leaving people feeling understood and cared for.
- By evoking positive resonance, a leader will have a lasting path to motivation: rallying people around a worthy goal.
- **“The music of leadership is emotion.”**

Goleman, (1995 & 2006), Boyatzis & McKee, (2005)

ABC Model

Ellis, A. (1962, 1991, & 2000), Beck, JS (2011)

WE DON'T CONTROL

WE CONTROL

WHAT HAPPENS

**HOW WE RESPOND
TO WHAT HAPPENS**

Emotional Intelligence

Brackett & Salovey, (2006)

- Emotional intelligence is defined as the result of an adaptive interaction between emotion and cognition
- that includes the ability to perceive, assimilate, understand, and handle one's own emotions and the capacity to detect and interpret the emotions of the others.
- In other words, it is ability or competency based, as opposed to being rooted in personality attributes

KEY ➡ It's a mark of emotional intelligence to avoid internalizing every feeling that enters your heart

Grant, (2021)

Emotional Regulation

Grant, A. (2024)

- Emotion regulation is not about controlling what you feel
- **It's about choosing how you respond**
- Wise people don't suppress emotion
- **They find constructive ways to express it**
- Intense feelings don't always demand immediate reactions
- They often benefit from deep reflection

- Emotional intelligence (EI) is a key factor in improving the quality of leadership
- Leaders with high EI are better at using leadership styles that work for the team, especially transformational ones.
- They are also better at building trust, boosting motivation, and making the workplace a healthy place to be.
- EI helps leaders make smart decisions, recognize the emotional needs of their subordinates, and change their leadership style as needed to get the best results.
- EI leaders are more self-aware, can control their emotions, are more empathetic, and improve their social skills

Sinaga, H. R. (2025)

MVPs of self-regulation

Fowler, S.(2023)

- **Mindfulness:** refers to the ability to be aware and attuned to what is happening in the present moment without judgment or an automatic reaction.
- **Values:** are premeditated, cognitive standards of what a person considers good or bad, aligning with the organization's mission and personal purpose.
- **Purpose:** involves having a deep and meaningful reason for doing something, a social significance to your work.

The four trait factors of emotional intelligence:

Brooks, (2018)

- **Self emotional recognition.** This refers to the ability of the individual to accurately identify and recognize their own emotional states as they are happening
- **Self emotion regulation.** This refers to the ability of the individual to change their own emotional state at will
- **Others' emotion recognition.** This refers to an individual's ability to accurately identify and recognize the emotional states of others, often from behavioral cues, such as body language or facial expressions
- **Other's emotion regulation.** This refers to the ability of an individual to have a predefined impact on another's emotional state. For example, the ability to work out what actions or behaviors may make another individual angry, sad or happy, for example, and then to carry out that action.

3 traits help leaders continuously improve

By: Gerard Beenen

Leader Characteristic	Description	Benefits
<ul style="list-style-type: none">• Self Awareness• Seeking Feedback• Self Regulation	<ul style="list-style-type: none">• Having an accurate view of how others perceive you• Proactive Search for information about leadership assets and liabilities• Exercising control of emotions and impulses	<ul style="list-style-type: none">• The foundation to effective leadership and development• Establish one's self-development and improvement agenda• Provides intrapersonal information and clearer decision-making

Negative feedback-seeking behavior as ‘an effort to obtain information about inadequacies in work behavior and work performance

Lynnyk, A & Fischbach, A. (2024)

- In policing where the focus is often on avoiding and sanctioning errors, it is necessary for both leaders and followers to actively solicit critical information about their work behavior by seeking negative feedback
- Learning from past mistakes and improving oneself is important on all levels, followers, leaders, organizations, and society

To encourage this behavior among followers, leaders play a key role

- **With their own negative feedback-seeking behavior, they encourage openness to criticism in their followers**
- Particularly authentic leaders, who are open and solicit feedback from all followers, have positive effects on their followers' negative feedback-seeking
- Thus, police leaders who are open to criticism and adhere to moral norms even when faced with opposing powers should be encouraged and promoted

Learning to Rise

Brown, B. (2018)

ARMORED

- Being a *knower* and being *right*
- Designing in a black box
- Putting role power before good ideas
- Resisting existing feedback that hits deep

DARING

- Being a *learner* and *getting it right*
- Scheduling regular feedback sessions and planning focused time to work with it
- Disconnecting our egos from our work
- Seeking management-specific feedback

Issue: Receiving feedback too late (or not at all)

Brown, B. (2018)

Sum Total

The First Big Rule:

Crossing the Bridge from Staff to Management

YOU NOW REPRESENT MANAGEMENT

Topics	Buddy	Boss
Information Sharing	Peers can gossip and speculate.	Managers must maintain confidentiality and be impartial.
Performance Management	Peers can turn a blind eye to poor performance.	Manager must hold everyone consistently accountable to performance.
Conflict Resolution	Peers can avoid conflict.	Managers must handle and resolve conflict.
Professional Behavior	Peers are more accepting of someone's "bad day".	Managers must handle stress professionally and model the behavior they want out of others.

- 1) **You represent agency leadership and organizational management.** You are the Boss not the Buddy
- 2) **You are responsible for those under your charge.** It is not a Democracy because you are responsible for the ultimate consequence of any decision.

BUT

- You have an obligation and duty to provide and promote exemplary leadership with safe, effective and fair management to your people
- Central to this function is the capacity and ability to develop constant feedback loops to utilize in your decision-making process and mentor regarding those decisions
- There will be times that will result in you saying no, or your decision not being in concert with such feedback
- ***Provide story line explanations to create vision, develop buy-in, and shape direction***

This is central to a leaders relational engineering
YOUR CHARACTER MANIFEST IN WORK CULTURE

The Commander must be separate and detached; Remember you have “crossed the bridge to the management side”

There are two (2) sides to the desk

- You now represent and are a part of management
- When you see, are told, then management knows
- **Supervisors not holding officers accountable, looking the other way, or more concerned about being liked than representing management create an environment for agency problems, leadership problems and individual officer problems, risk and liability**

The Role of Identity

Other Factors that Impact Subordinates

- **Uncertainty:** occurs in the workplace in a number of ways, such as whether one's job performance is adequate, or uncertainty regarding one's job security due to operational conditions
- **Task autonomy:** refers to a feeling of control over the outcomes of one's work. An acceptable degree of task autonomy is important for psychologically healthy work

- **Self-efficacy:** the belief that one can successfully execute a desired course of action. (Employee Confidence)
- **Congruent expectations:** Psychological contracts that refer to employees' perceptions of what they owe to their employers and what their employers owe to them
- **Morale:** the effect of a work environment on employees, and how well a group can hold up under hardship. Good morale is likely to be contagious, helping to shield individuals in the work group from negative mental states

- **Social support:** There are different types of social support, including tangible (i.e., instrumental) support, appraisal support, and informational support, emotional support, which includes empathy, listening, and showing that you care
- **Organizational just supervision:** treating people with dignity and respect, giving people an opportunity to voice their questions or concerns, explaining judgments and decision-making process, and being truthful, transparent, fair and impartial (free from self-interest, bias, prejudice, or favoritism)

- **Differences among supervisors:** and their style of supervision can have major effects on employees' emotional well-being
- A supervisor whose behavior effectively reduces the anxiety of employees essentially relieves them of the need for coping and frees their minds for more productive and enjoyable activities
- Supervisor behavior takes on added importance because its effects may not be confined to the workplace. A stressful supervisor–employee incident in the afternoon is likely to be taken home
- A supportive supervisor may break the chain of stress at work and unpleasant consequences at home, resulting in the maintenance of systems of social support and resistance to stressors

“The employees run at the speed of the boss”

Your people are always watching you!

Set the example, model work ethic

“Be a Beaver”

***BECAUSE BEAVERS
ARE WORKERS AND
BUILDERS***

Model Roles and Responsibilities Mindset

Teach them to ask...

- Do I have the authority?
- Is this my responsibility within my role?
- I'm I the best suited to make this call?
- Who are the other stakeholders with the same jurisdiction?
- Is there an obligation or professional responsibility to notify to coordinate

“Stay in your lane.”

How can you manage others to stay within their roles if you deviate from yours?

Understand the prioritization concept

It is a balance...what are your priorities?

SUPPORT YOUR PEOPLE

By Holding them accountable and making them successful in their jobs, while being empathetic toward their personal life responsibility.

Support them in their burdens from the mixture of their responsibilities from work and family

FORMULA: Factor in...

**“THE PRAGMATIC BALANCE” BETWEEN
MISSION AND PERSON AND LEAN
TOWARD THE PERSON**

Empathetic Leadership Perspective

- One in four employees say work-life balance is the number one reason they would job hunt

Workforce Achievers Institute Study (2021)

- Leaders can intentionally create a culture where empathy, compassion and respect are central to the way we engage with each other Myles, (2014)
- Seeing employees as whole people with responsibilities and obligations outside of work is a prerequisite for empathetic leadership Kruse, (2021)
- **Expectations might need to shift, flexibility might need to be given, communication might need to be heightened**

PRAGMATIC BALANCE EVALUATION

RULES/ETHICS/FAIRNESS

The Perspective of Empathy and Duty to Problem Adoption

Problem Adoption

Do you Adopt your subordinates' problems and make them yours?

THE VALUE OF PROBLEM ADOPTION

- Demonstrates care and sincerity
- Develops trust and relationship
- Fosters communication and collaborative work
- Builds credibility and influence
- Promotes chances for better results
- Provides learning and organizational maturity while mitigating chances of future risk
- Insulates agency, management and staff from additional problems

The Edwards Theory of Problem Adoption

“When a subordinate has a **“LEGITIMATE”** problem identified through their perspective and in concert with moral, legal and ethical principles, within the scope of professional standards and policy and affecting or potentially affecting the work unit, the supervisor should adopt the problem to solve on behalf of the subordinate.”

Rationale for the Adoption

1. Its your **JOB**
2. If it's your problem, instead of their problem you will frame it as such, and work harder to solve it.
3. The subordinate will recognize and appreciate the efforts of the supervisor, and such will build credibility (for the boss doing their job as they see it) and develop relational currency because it was done for them
4. **Benefits to the organization as a whole**
Deposits emotional currency into your people's accounts that you may later need to draw on

Dedicated Priorities

Do you proactively plan and devote the time (up-front) to shape the future for your people?

When you Identify an issue regarding your people:

- Work backwards from your goal to find the resources, develop a plan, and create a means to achieve that goal if practicable and possible
- Proactively press forward with your efforts keeping them on the “front burner” where they are a focus and narrowly tailored toward completion in a timely and meaningful fashion

Promise little, deliver a lot

Develop opportunities for exposure for your people to the people of magnitude:

First Rule: Demonstrate sincere joy and pride in your subordinates when they accomplish something

Second Rule: Take responsibility when things go wrong,
NEVER BLAME

- **Give Subordinates Credit**/Never take credit
- **Highlight their ideas**/Never steal them
- **Promote their talents**/Never hide them
- **Praise their efforts**/Use specific articulation to highlight performance and result

Motives

You can't hide, distinguish, or cover up your motives.
Words, non-verbal's, actions, and conduct patterns will reveal them.

You broadcast cues that generate from your affections (emotions) and translate into signals

Maintain genuine, authentic, credible, professional, responsible

“non-selfish” motives. No hidden agenda

The higher duty - not about you!

Assignments sometimes should be tethered to needs from mission, strategy, individual qualifications and the operational realities of work, Not manipulative assignments, promotions, or transfers

Some Reasons:

- Political influences for personal gain
- Deflection from an appropriate more difficult course of action to an easier “make do” action.
- Result of a risk adverse attitude regarding a personnel issue
- Lack of Interpersonal courage

The Phenomenon of Suitcase Supervisors

- **Steppingstone mindset** (focus on their next assignment or promotion)
- **No ownership in office** (lack of sacrifice for or buy-in to their office)
- **No investment in future outcomes** (decisions rooted in their self concerns over the good of office, loss of investment and sense of pride in the office)
- **Loss of authentic leadership**

Embrace, Engage, and Own
OWNERSHIP IS HUGE

Managers and Supervisors need to always be on call to respond immediately to crisis

- **Care** (ownership and pride in work unit)
- **Available** (ensure subordinates have immediate assistance and on scene access if needed)
- **Involved** (aware, curious, and mentoring)
- **Restrained** (empowerment to subordinates)
- **Connected** (establish feedback loops and incorporate oversight)
- **Growth and Development oriented**
- **Responsible and Accountable to their people**

BE THERE FOR YOUR PEOPLE WHEN THEY NEED YOU

Accountability

You are the Commander. You are responsible for **what occurs or does not occur.**

Have the courage and fortitude to
“take responsibility.”

You will always be held accountable.

The Commander must stay above the red line
and hold everyone else accountable to stay
above the red line.

As a result, the “culture” of the work unit will
be to respect those “red line standards.”

Follow the rules.

Model the ethical and professional conduct

Respect the rules.

Support the talk with the way you walk

The Anatomy of Setting an Example: ***make it a priority not to be late...***

- It promotes disrespect
- It demonstrates carelessness
- It signals others that they are not important to you
- It signals to others the meeting or subject matter is not important to you
- It destroys your opportunity to role model for those under your command and set the standard to enforce

Be Mindful of the Professional Relationship and what you say.

“You are the boss, not the buddy.”

You're not one of the “boys” or “Girls” anymore...No jokes **on** people. No tricks **on** people. No playing with people's minds.

They see you and hold you to a different standard

Its good to create and participate in wholesome good humor - but not on or about those under your charge.

A laugh is a productive tool for a comfortable atmosphere in a work unit.

Think with your head not your heart

- A sharp tongue response, rude answer, or sarcasm toward a subordinate will create a huge issue.

You are the boss - act like it!

- *Temper and tailor your directions and responses to subordinates appropriately*

What you say and how you say it matter

Many contemporary internal affairs cases begin as a result of a supervisor who cannot control his or her mouth

WORDS MATTER!!!

You can't take back what you have already said...

When you are wrong... **ADMIT IT!**

Take responsibility and apologize if such is required.

An Apology Needs to Be Framed and Viewed as Growth

Take the appropriate steps to learn from problems/mistakes, then **“FIX”** them “upfront” in a “proactive” and transparent fashion.

Six Key Components to an Apology

Roy Lewicki, Ohio State University

1. Expression of regret
2. Explanation of what went wrong
3. Acknowledgment of responsibility
4. Declaration of repentance
5. Offer of repair
6. Request for forgiveness

The first most important component is an acknowledgement of responsibility. Say it is your fault, that you made a mistake, the second was an offer of repair.

Supervisors never have the right to hold a grudge!!!

*Demonstrate **forgiveness**, temperance, sincerity, care, and concern.*

- Don't alienate yourself and others
- Don't give your power away to another to haunt you
- Don't set your agency, others and yourself up for lost opportunities

When its over...its OVER!!!

TURN THE PAGE

Cao, Van der Wal, & Taris,(2021).

When work relationships matter: Interpersonal forgiveness and work outcomes

Studies have found that there are a number of benefits to forgiveness experienced by employees and organizations, these include:

Cao, van der Wal & Taris, (2021)

- Reduced stress
- Less tension in co-worker relationships
- Enhanced psychological well-being • Better physical health
- Higher relationship satisfaction
- Increased emotional, cognitive and relational stability

Forgiveness produce favorable work outcomes, like higher job satisfaction and work engagement, along with reduced instances of burnout

Focus on the Homelife Dilemma

- **Work interference with personal life (WIPL)**

Gim & Ramayah, (2019)

- Be alert to the boundary conditions where work engagement can become detrimental: those conditions where overly engaging work ends up ‘swallowing’ an employee’s personal life.
- The line between work engagement and the work family interface is a thin one
- **Leaders should reflect on where their organization’s focus lies, considering all related benefits and costs, in terms of employee energy and mental resources, in the short as well as the long run.**

Byrne and Canato, (2017)

We do not live in a Vacuum

We live in a real world of human interaction and fate

Domestic Issues and Financial Issues are natural occurrences in our craft...

- From troubled relationships to secondary employment issues all must be evaluated through an empathetic and pragmatic lens.
- Management must incorporate guidance from policy, grounded in objectivity and motivated toward improving the employee's situation if possible.

Be sensitive

Hints, suggestions, or innuendos are the functional equivalent of orders when coming from the boss.

“Will no one rid me of this meddlesome priest”

--- Henry the 8th regarding Thomas Becket

- From soliciting a \$10 donation, fundraising to a wedding gift, to who should do a particular extra curricular activity.
- Outreach and Consent, before dictating office fellowships, parties or social gatherings or better outline the perimeters and delegate

Remember...

Just because you have made it into management or supervision does not mean that you are smarter than your subordinates.

Police Leadership is largely focused around the following:

Karp, Filstad, & Glomseth, (2019)

- Working toward mastering the leader role(s)
- Dealing with organizational tasks
- Operating the organizational unit, they are responsible for
- Making choices and setting priorities
- Caring for and developing interpersonal relationships
- Managing themselves

- Influencing the standard conditions
- Being committed to the social mission
- Doing a job that is formed by a very specific leadership culture

The Bright Triad

3 Qualities

Nilsson, H., & Kazemi, A. (2023)

- **Ethical Mindfulness:** free from the propensity to commit violence, ethical mindfulness translates into the behaviors of not lying, cheating, stealing, or harming others
- As a broader personality quality, showing ethical mindfulness means that, in general, you stay away from gossip, treat people with respect, and try your best to adhere to the highest personal standards

- **Kindness:** Seek, understand, and demonstrate empathy
 - The very opposite of narcissism in which your first order of business is to attend to your own needs and happiness
 - Moving on to think about people who've helped you, others to whom you have no obligation, and from there toward the toughest test of all—someone whom you dislike or who has been confrontational
 - In the type of mental shift that would encourage kindness, you would try to see things from their point of view, as annoying as this might be

- **Compassion:** A compassionate state of mind, “an antidote to indifference
- This Bright Triad trait means that you can understand the plight of others but then, going beyond empathy, are willing to help them
- Maybe that ornery person in your group had a bad day
- Seeing things from their perspective allows you not just to put up with them but also to actually offer a helping hand.

Police Leadership: A Systematic Review of the Literature

Mitchell Pearson-Goff and Victoria Herrington
Policing, Volume 8, Number 1, pp. 14–26 (2013)

Emergenced as important for leadership: ethical behavior, trustworthiness, legitimacy, being a role model, communication, decision making, and critical, creative, and strategic thinking ability.

Five key activities emerged as important for leaders to engage in: creating a shared vision, engendering organizational commitment, caring for subordinates, driving and managing change, and problem solving.

**A study by Vito, Suresh, and Richards published in,
“Policing - An International Journal of Police Strategies
and Management” in 2011**

Surveyed the opinions of 126 police managers in 26 states regarding their ideal leadership style given the choices from servant, autocratic, and laissez-faire leadership styles. **The study revealed a strong preference for servant leadership, rejecting the autocratic and laissez-faire**

Dr. Joseph Schafer, (2008), completed a similar survey (FBI NA) that found the following traits of effective leaders:

- Set a proper example and demonstrate trustworthiness.
- Consider input from others.
- Accept responsibility and admit mistakes.
- Make informed decisions based on appropriate research and study.
- Treat all employees fairly and with dignity.
- Allow subordinates to handle duties commensurate with their skills and authority level.

Traits of Effective Leaders

Biggers, (2021)

- Being risk-open and pursuing new opportunities and ideas from followers, which promotes an enterprising work culture
- Delegating tasks and spreading power downwards throughout the organization
- Making decisions with other leaders democratically and based on evidence as a team, combining strengths, while lessening the negative impacts of their weaknesses
- Setting challenging goals for followers and expecting excellence to encourage improvement

- Mentoring followers by providing social support and training them to become leaders, as well as helping them grow professionally and personally
- Asking followers for their opinions and ideas before making decision
- Encouraging followers to assume more control over their work and to play a more active role in their own career development
- A set of empowering personal beliefs and a vision that fits the organization's needs

Traits and habits that were common among the ineffective leadership

ACTS OF COMMISSION

- Focus on self over others
- Ego/arrogance
- Closed mindedness
- Micro-management
- Capriciousness

ACTS OF OMISSION

- Poor work ethic
- Failure to act
- Ineffective communication
- Lack of interpersonal skills
- Lack of integrity

(Schafer, 2010)

Most common characteristics of bad leaders include:

Bigger, S. (2021)

- A lack of empathy or connection with followers
- Obsession with gaining and increasing personal power, rather than having a focus on making the organization better
- Bullying co-workers and followers
- Favoritism
- Criticizing colleagues and peers who are considered to be threats to their status or position

- Using power and threats to get people to do things
- Refusing to engage properly in teamwork or consult with others before making decisions
- High levels of risk-aversion that causes the organization to miss opportunities for growth
- Lack of trust in delegation, that keeps the organization from operating quickly and efficiently

The Moral Injury of Ineffective Police Leadership: A Perspective

Simmons-Beauchamp & Sharpe, (2022)

- **Ineffective police leadership is characterized by inconsistency, moral ambiguity, lack of support, oppression, and self-serving agendas**
- The pervasiveness of ineffective leadership is further experienced in the paramilitary context of police culture where orders and rank are expected to be followed
- Communities require police to be well to effectively address public safety
- It is critically important that police leadership be aware of what impacts their officers' mental health while creating and supporting psychologically safe workplaces.

Toxic Leadership is destructive, abusive, and ineffective

Milosevic, Maric & Lončar, (2020)

- Toxic leaders conceal their lack of relevant competence and maintain a position of control, at the exclusion of other organizationally relevant objectives
- Toxic leaders engage in upward and downward directed influence attempts that create ambiguity and confusion
- Toxic leaders increase the toxicity of the job context and interfere with others' ability to perform their work

THE DARK TRIAD

Narcissism :-

Characterized by grandiosity, pride, egotism, and lack of empathy.

Machiavellianism :-

Characterized by manipulation and exploitation of others, a lack of morality, callousness, and extremely self-centeredness

Psychopathy

Psychopathy:-

Characterized by antisocial behavior, impulsivity, selfishness, callous and unemotional traits, remorselessness.

The dark side of leadership: do negative leadership traits lead to employee depression

Tokarev, A., Phillips, A. R., Hughes, D. J., & Irwing, P., (2019)
and Gaur, B. (2023)

- A 2023 study has found that the dark triad leadership traits, psychopathy and narcissism, predict workplace bullying by leaders
- ***The dark triad comprises of three personality attributes:***
 - Narcissism
 - Psychopathy
 - Machiavellianism

- Leaders with dark triad traits tend to be aggressive, authoritarian and engage in highly manipulative behaviors with little or no regard for the health or mental health of the organization's employees, or indeed their own peers
- **Are callous and manipulative, while also having a sense of entitlement and superiority**
- Frequently boast, behave rudely, act aggressively and tend to exploit other people, even work colleagues
- **As a result, they tend to develop unhealthy relationships with other people and engage in behaviors that are detrimental to their followers' well-being and career success**

8 TRAITS OF A TOXIC LEADER

1. Frequent lying or inconsistent expectations
2. Doesn't listen to feedback
3. Arrogance
4. Places importance on hierarchy
5. Discriminates against employees
6. Lacks confidence
7. Incompetent at their job
8. Self-interested

The Toxic Five

DISRESPECTFUL

NONINCLUSIVE

UNETHICAL

CUTTHROAT

ABUSIVE

Source: "Why Every Leader Needs to Worry About Toxic Culture"
By Donald Sull et al., *MIT Sloan Management Review*, March 2022
sloanreview.mit.edu/x/63409

- Long-term and regular contact with toxic leaders cause strain and reduced well-being among their subordinates. Hobman et al. (2009)
- Toxic leadership is related to the high level of withdrawal in subordinates. Carlson et al. (2012)
- Toxic leaders reduce employee self-confidence, self-worth and self-efficacy. Harvey et al., (2014).
- **In sum, three major outcomes in terms of psychological distress due to toxic leadership reported in the literature are loss of self-worth, agitated and withdrawal (Hobman et al., 2009).**
- **With a Toxic Boss you must become the Island of faith, optimism, and organization in a sea of dysfunction for those under your charge to depend upon** Keenan, (2007)

The Chemistry of Stress

Dr. Daniel Goleman and Dr. Richard Boyatzis
Harvard Business Review

- When people are under stress, surges in the stress hormones adrenaline and cortisol strongly affect their reasoning and cognition
- Attention fixates on threat from the boss rather than the work at hand and memory, planning, and creativity go out the window
- Poorly delivered criticism and displays of anger by leaders are common triggers of hormonal surges
- Research demonstrates that when someone who is very important to a person expresses contempt or disgust toward that person, stress triggers an explosion of stress hormones and a spike in heart rate
- Leaders are not immune to the contagion of stress

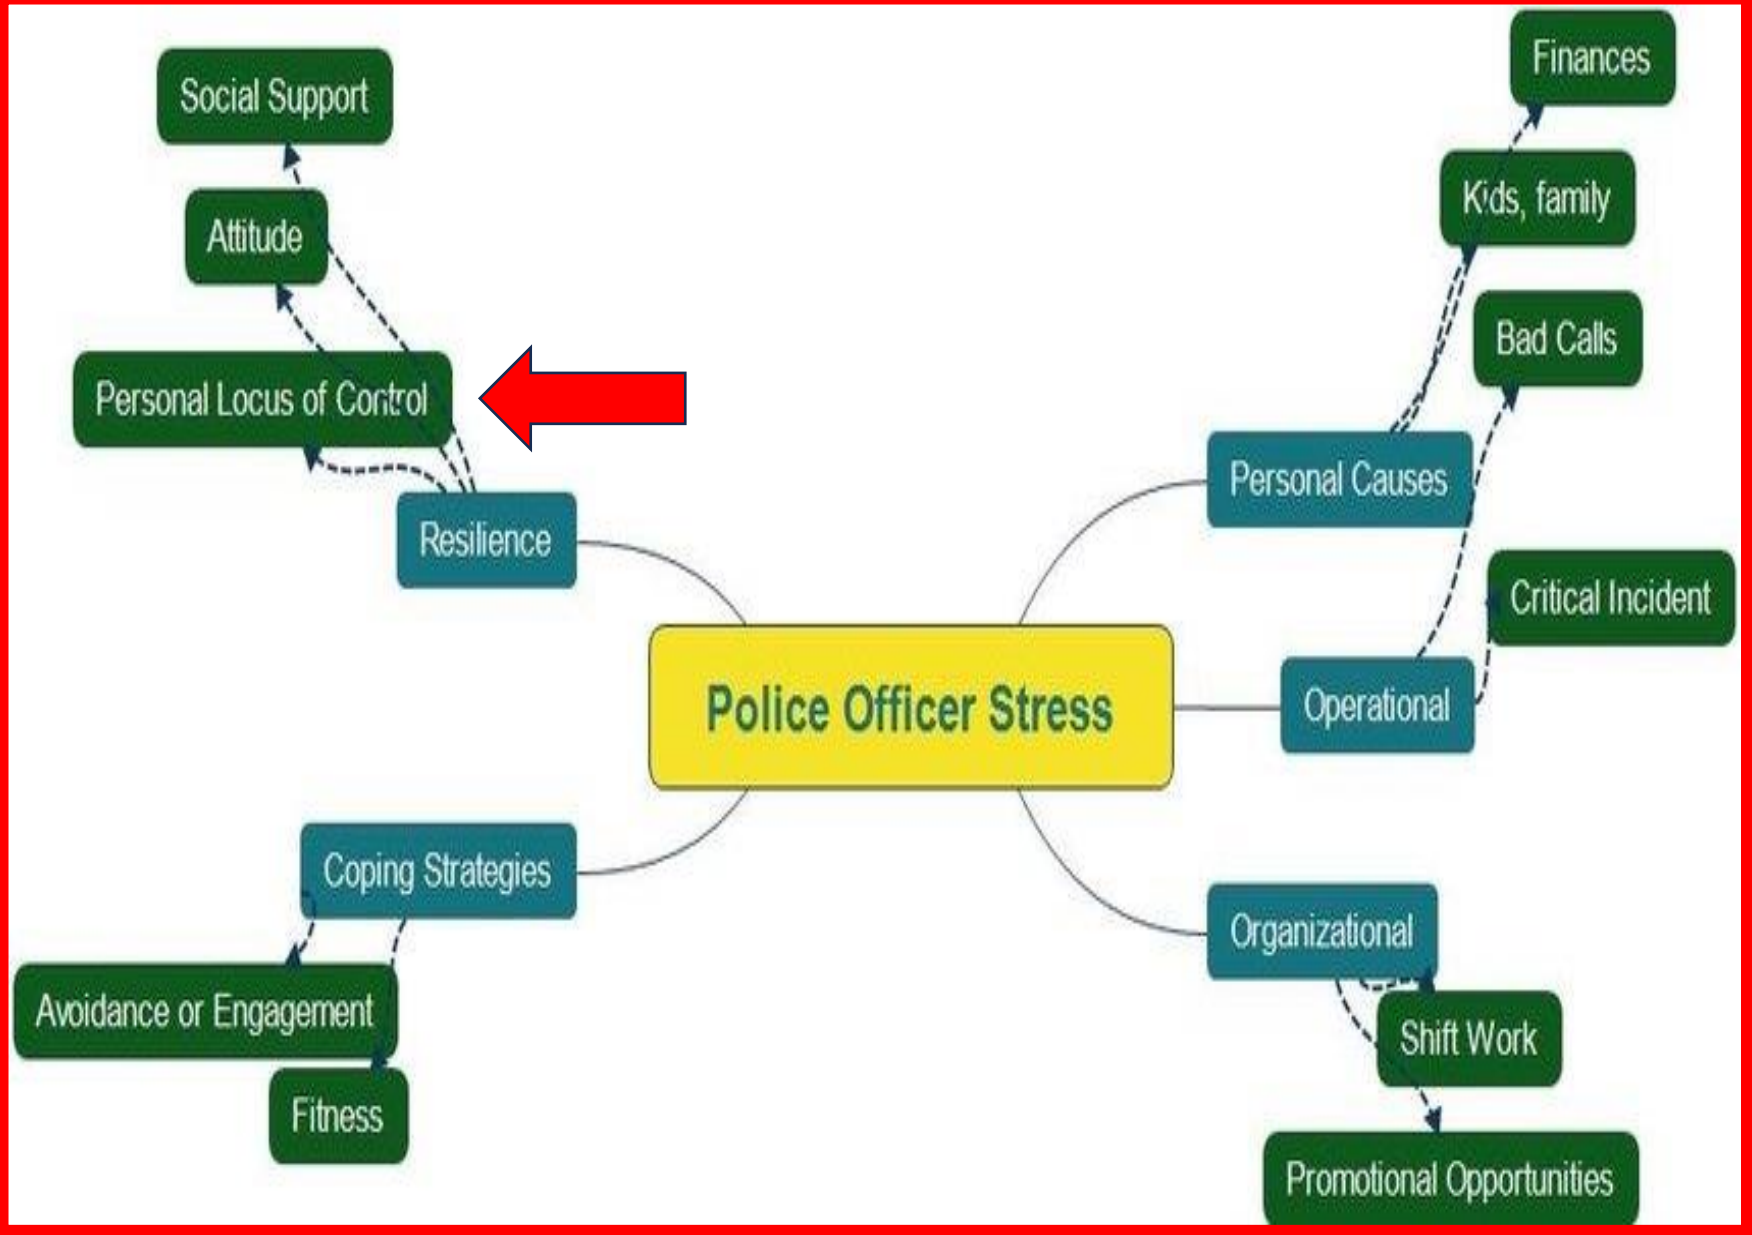

Focus upon occupational stress and how it can adversely impact workplace environment and performance.

Study after study has found the primary stressors for police officers are not the external pressures or dangers of the job, but rather the exerted internally from within the organization and administration

- Stress occurs when demands are placed upon an individual that exceed that individual's capacity to deal with it
- Stress intensifies when the individual lacks the means to avoid, alter, or control those demands
- **The less control employees have over what they are expected to do and the outcome of their efforts, the more likely they are to experience significant stress**

- **Unsupportive management systems cause officers to experience stress due to a lack of control**
- Study results indicate that officer's perception of stress, induced by the traditional organization could be reduced by leaders adapting and implementing employee participative management practices that are far more detrimental than traditionally perceived stressors.

Stinchcombe, (2004), Shane, (2008)

Martinez, (2018)

Issues with Stress in the workplace upon the commander

Many police managers experience health problems,
both physiological and emotional

Command brings forth a variety of new stressors:

- Office Politics
- Deadlines
- Budget Constraints
- Performance Appraisals
- Grievances
- Disciplinary Actions

Personnel problems really cause stress

OUT OF MY CONTROL

Stress Contagion

Often, leaders do not understand how their behavior can lower employee job satisfaction and contribute to higher stress levels in their subordinates

Like an infection it rolls downhill and adversely impacts:

- Officers' physical and mental health
- Quality of their personal/family life
- Work performance
- Professional behavior

Tool Kit for Resilience

- Broaden and build
- Growth mindset over fixed mindset
- **Gratitude from blessings**
- Understanding meaning and acceptance
- Understanding the ABC model and developing a playbook
- Communication skills
- Physical, mental, spiritual, and social fitness

Resilience among police officers: a critical systematic review of used concepts, measures, and predictive values of resilience

Janssens, Van der Velden, Taris, Van Veldhoven & Marc (2018)

- Increased awareness and self-management of stress reactions
- Reduced distress, anger, sadness, and fatigue
- Reduced sleeplessness and physical stress symptoms
- Increased peacefulness and vitality
- Reduced competition, improved communication, and greater cooperation within work teams
- Improved work performance
- Greater confidence, balance, and clarity under acute stress
- Quicker recalibration following acute stress
- Improved listening and relationships with family

Grant, A. (2023)

The Dunning–Kruger effect

(Kruger & Dunning, 1999)

- Ignorance is prevalent in everyday life
- Ignorance is often invisible to those to suffer from it
- People with substantial deficits in their knowledge or expertise often are not able to recognize those deficits
- The less you know about something, the more you feel you know
- The more you know about something the more you recognize what you don't know

In short, those who are incompetent, for lack of a better term, have little insight into their incompetence—an assertion that has come to be known as the Dunning–Kruger effect

- The DKE echoes previous assertions by renowned thinkers such as “I am not young enough to know everything”
Wilde,(1902)
- Real knowledge is to know the extent of one’s ignorance”
Confucius, (475 BCE)
- Ignorance more frequently begets confidence than does knowledge”
Darwin, (1871)

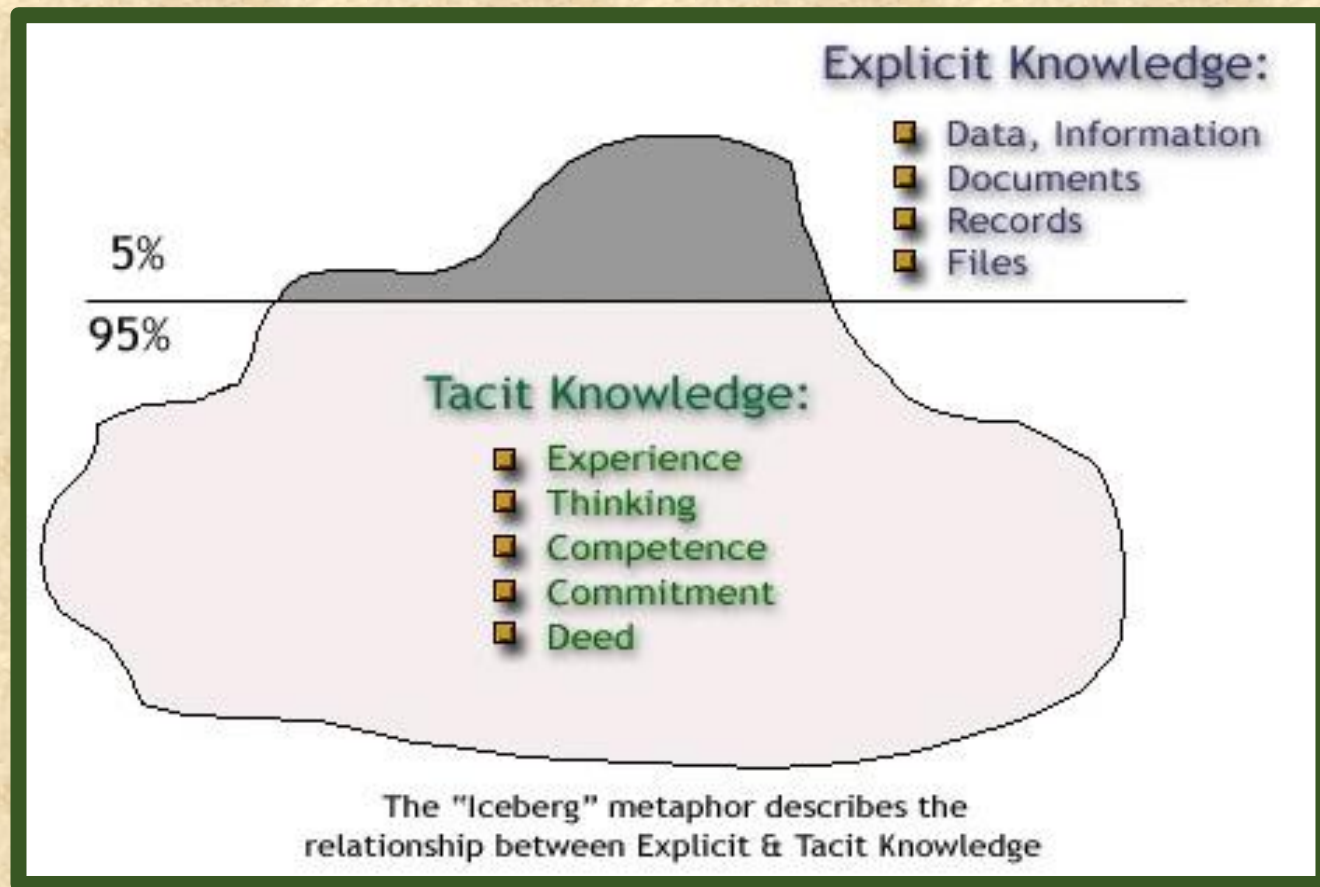

DKE could be defined as the general trend for the bottom performers to overestimate themselves, whereas the top performers underestimate themselves in lesser proportions.

Navarro, J., Multon, M., Petit, M., Ouimet, M. C., & Reynaud, E. (2025).

How do we guide if we do not know where we are?

Managing officers during the course of their duties require a supervisor to be competent, confident and responsible to their oversight responsibilities in many specific areas of expertise...

Managers must keep in and keep up

The Importance and Nexus Between Understanding Tacit and Explicit Knowledge

Experiences create layers
of invaluable context
that process into
understanding

“Tacit Knowledge”

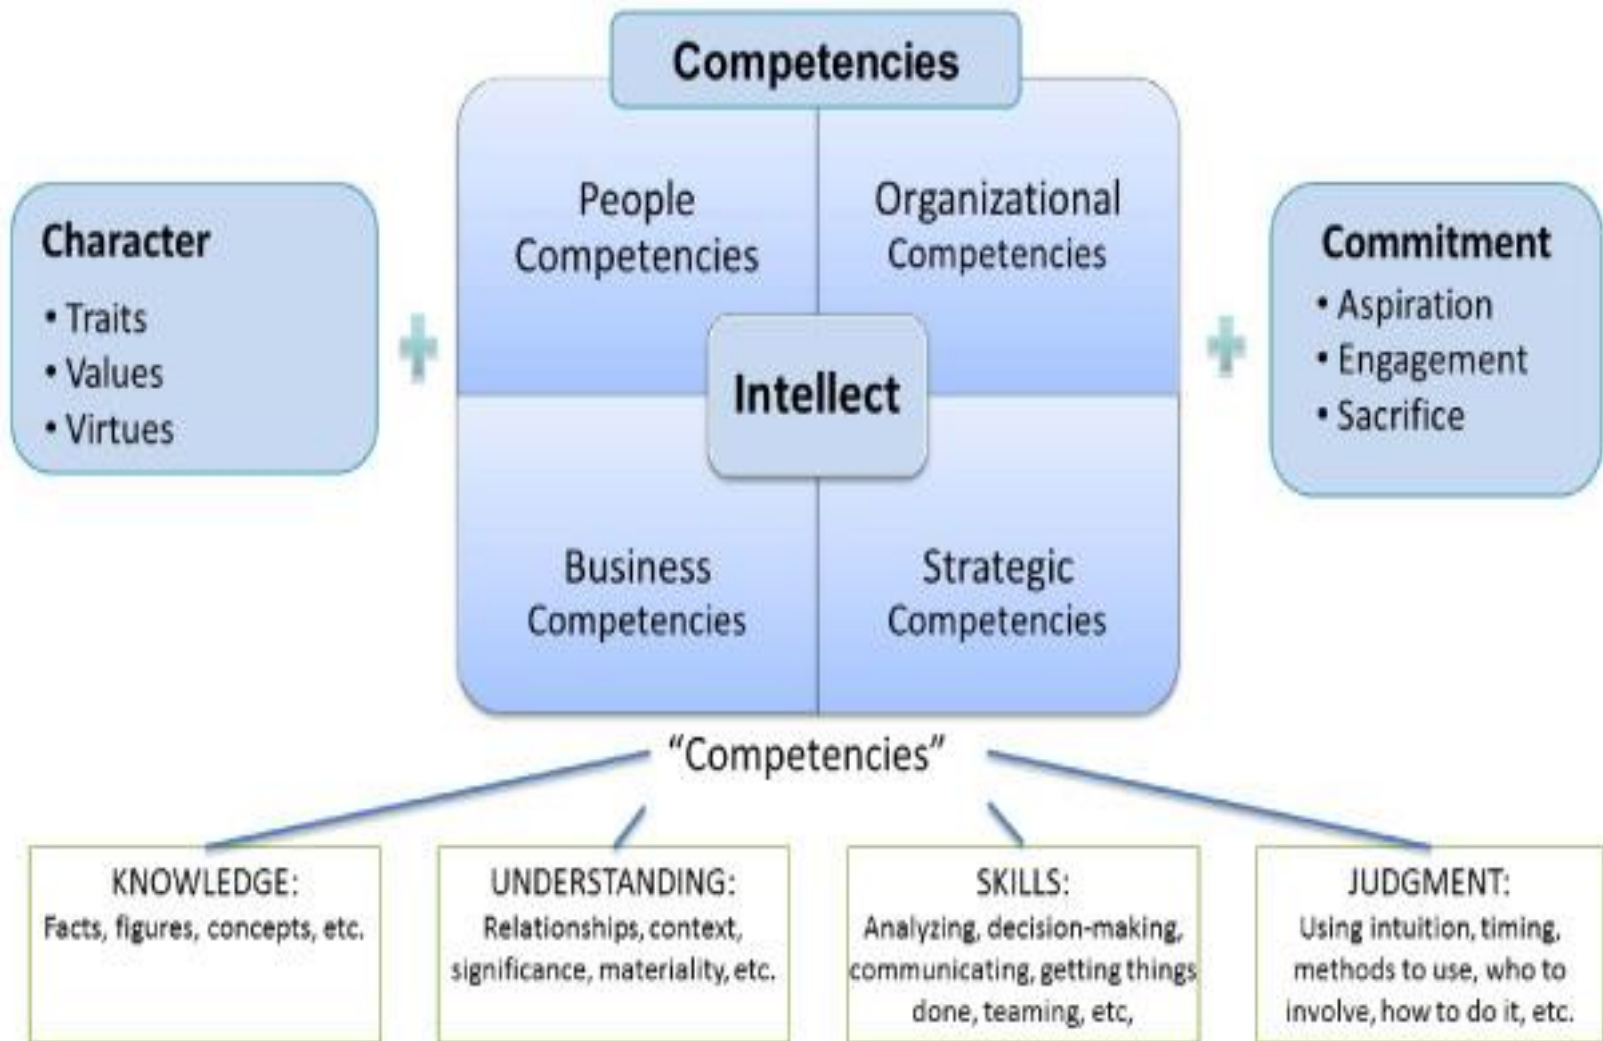

abilities and skills intrinsic
to the person *I Know How*

Policy, procedures,
and standard
practices

“Explicit Knowledge”

codified form,
standards, rules, data,
records, files
I Know What

COMPETENCIES

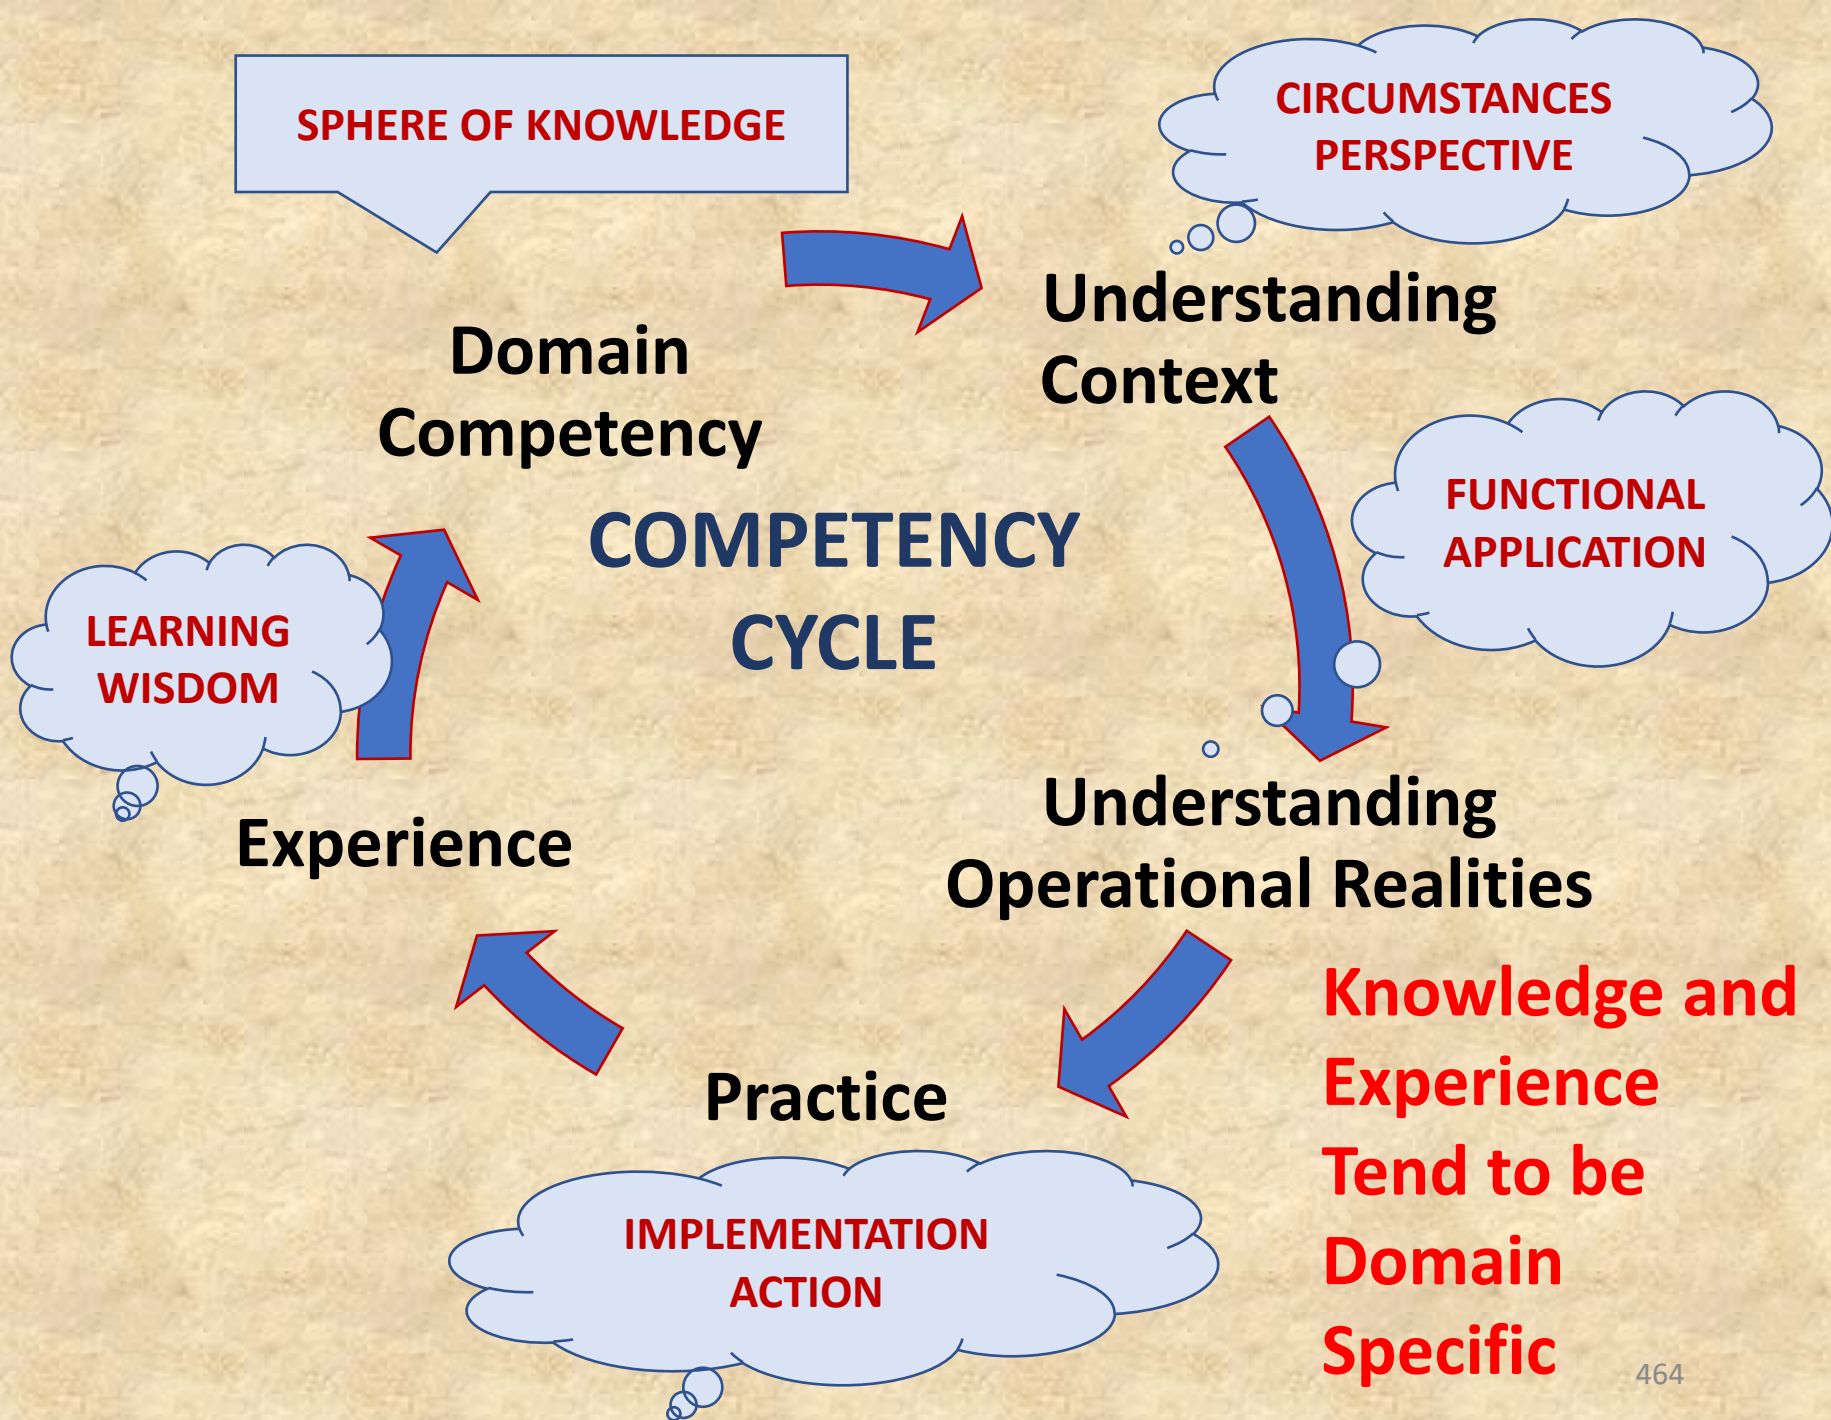

Gandz, J., Crossan, M., Seljts, G., Stephenson, C. (2010). Leadership on Trial: a manifesto for leadership development. London, ON., Canada. Ivey Publishing. September 2010.

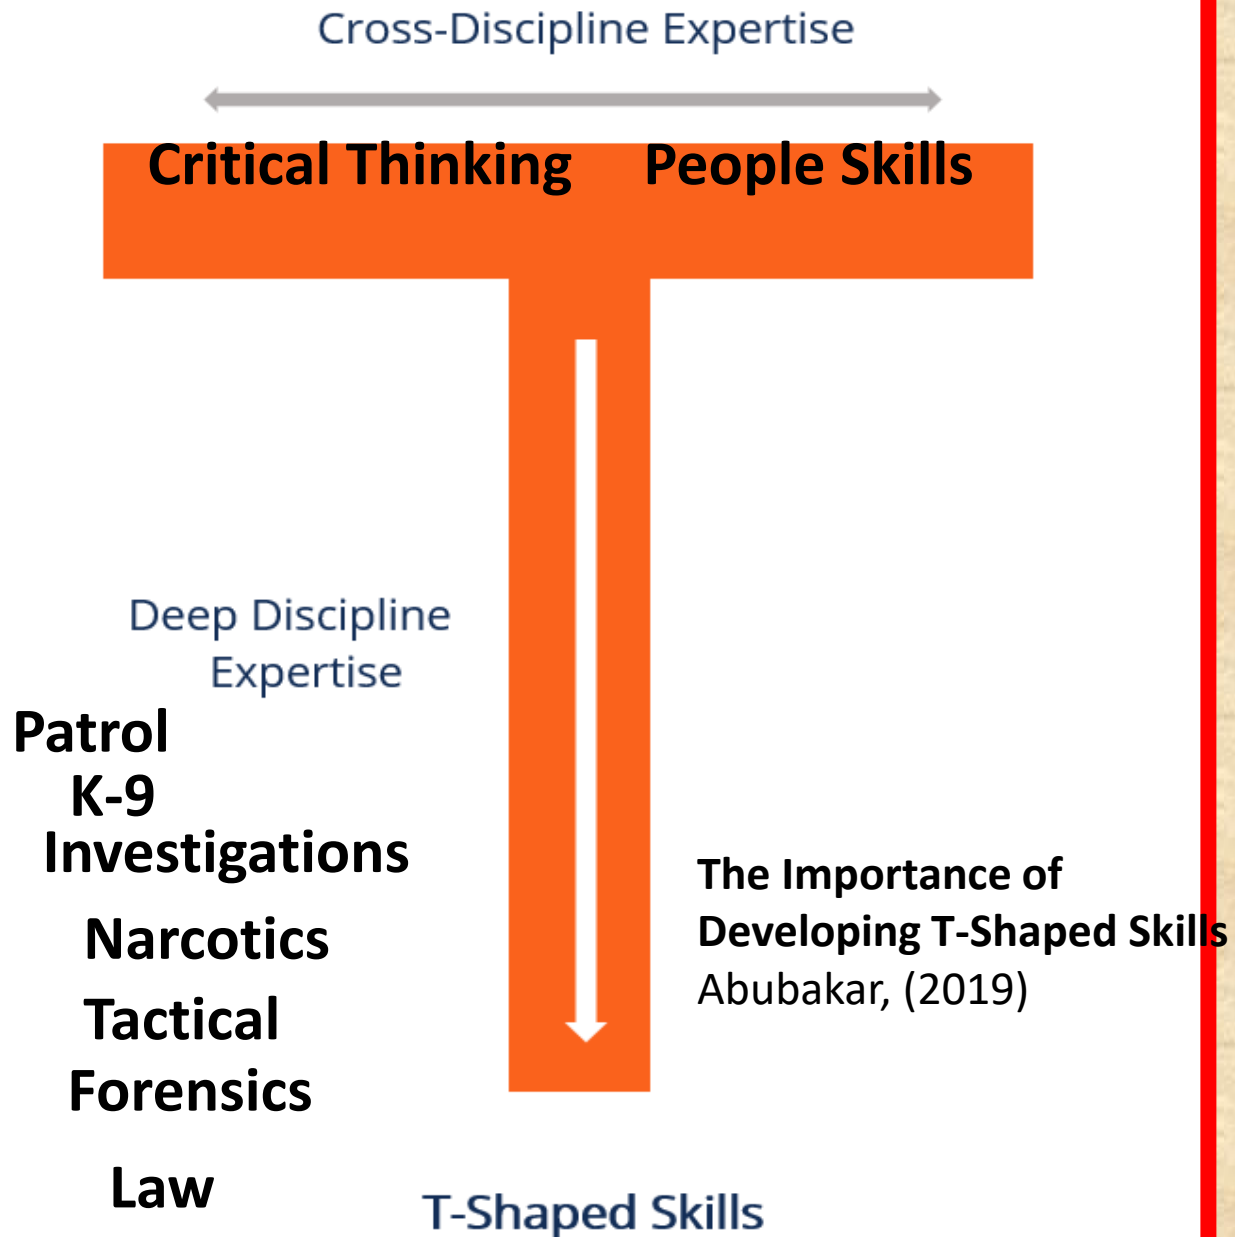

Competencies

- Competencies are sets of behaviors that are instrumental in the delivery of desired results or outcomes
- They are specific work-related constructs that are relevant to successful job performance
- It may be a trait, motive, skill, aspect of oneself image or social role, or body of knowledge that he or she uses
- **Competencies are “behavioral repertoires”, while competence is a “state” of attainment**
- Competencies are organizational performance accrues from the performance of individuals

Depth of Experience

- **Experiences create layers of invaluable context that process into understanding**
- Practical experiences force the interaction with the real-world implications of theories, concepts, and training
- Shapes the beliefs that transform into the operational realities of conduct
- Experiences lead to nuanced opinions
- Practical experience provides a foundation to manage uncertainty, ambiguity and other challenges and shapes the relationship to job responsibility
- **How to communicate in various relationships**

Hard Skills

Technical expertise and Knowledge for a job

- Doing things without other people interactions
- Working with sets of facts
- Conceptual and Theory Based knowledge
- Understanding how to Perform in a Domain
- Require acquired knowledge
- Cognitive in Nature

Soft Skills

Interpersonal qualities, People skills

- Anything that involves other people interactions
- Interpersonal Communication
- Behavioral
- People Sensitive and Empathetic
- Problem-solving
- Conceptual/analytical and Critical skills
- Visual, Oral and Aural
- Judgment and Synthesis

Respect the process

- Policy and procedures
- Reliance on structures, functions, and processes
- Established roles and responsibilities
- Civility and protocol
- Faith in institutions

***Leaders tend to get into trouble when they disrespect
and/or skip the processes***

Organizational Competency

- Executive leadership
- Management and supervision
- Staff and staffing levels
- The individual officer
- Hiring standards, processes, and training

The Nexus with

- Policy, procedures, protocols and customs
- Training, development and capacity building
- Supervision and mentorship

Policy is evaluated under four criteria for serious consideration:

Kraft and Furlong, (2015)

- **Effectiveness:** will the policy or program work
- **Efficiency:** the cost in relation to benefits
- **Equity:** the fairness aspect
- **Political feasibility:** does the public support exist

Operations and Policy Analysis

Must be grounded in operational reality

Has objectives, approaches and limitations, you must look through 3 lens

- Professional lens (consistent with other agencies)
- Scientific (evidence based) lens
- Political lens (public perception)

Two Processes:

- **Top-down vision:** Defining, analyzing, constructing, developing criteria, assessing and evaluating alternatives and drawing conclusions
- **Bottom-up construction:** Rooted in the operational realities of those that do the job (vetted)

The Process Knowledge Spectrum

Edmundson, (2012)

**Routine
Operations**

**Complex
Operations**

**Innovative
Operations**

Uncertainty

Leadership's influences in the operational realities of work sometimes are measured by...

How we manage policy and procedures nexus to people

“Our should and may versus shall and will”

- **Rules:** a prescribed guide for conduct or action.
(statements that say what a person is and isn't allowed to do) *Research has found that rules are superior to human judgement*
- **Standards:** something established by authority, custom, or general consent as an approved model or example. (a principle that is used as a basis for judgment) *Sometimes policy can become brittle under context*

“Rules simplify work, standards allow discretion for adjustment to the contextual particulars of the situation afoot.”

The context matters:

- Leaders who are rule benders are preferred in both competitive (for their dominance) and cooperative (for their prestige) contexts
- They are significantly more likely to be granted leadership status by followers than both rule abiders and rule breakers
- Rule breakers are the least preferred in leadership roles in both contexts, due to their low prestige

Wisdom

- To be able to move from one domain or context to another and see alternatives to make sound assumptions
- To be able to accurately “see” and “recognize”
- Subcomponents of wisdom included knowledge of life, prosocial values, self-understanding, acknowledgement of uncertainty, emotional homeostasis, tolerance, openness, spirituality, and sense of humor

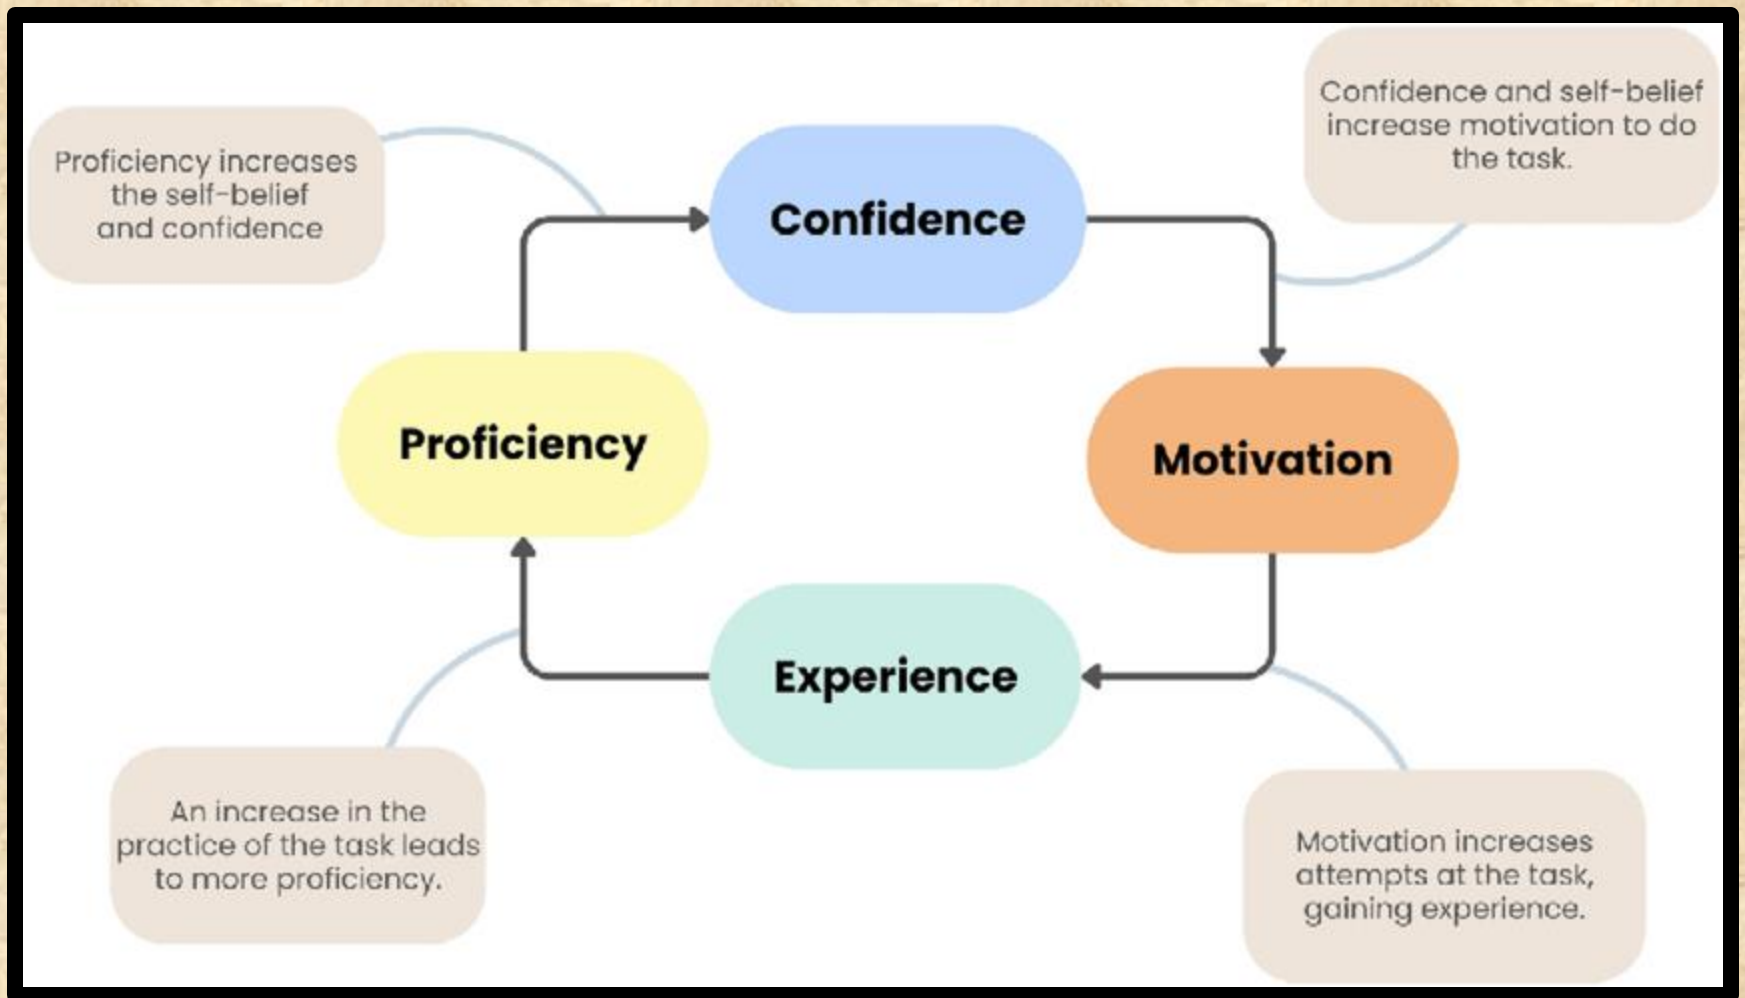

Bangen, K. J., Meeks, T. W., & Jeste, D. V. (2013)

Wisdom is the ability to anticipate the consequences of the decisions we make

Dr. Curtis McClung

- Self-efficacy and self-esteem are important components of self-confidence, yet it is a wider construct than either alone

Kane, A., Yarker, J., & Lewis, R. (2021)

Potts, B and White, H.P. (2024) Adapted from Bandura, A. (1977 and 1994)

The Importance of Confidence

“What turns our thoughts into action”

- Is a tremendous asset
- Must be tempered by humility
- Must be tested by an objective (emotion free) and open mind
- **Must be rooted in competency**

Fueled by empowerment (growth and development)

What about confidence research, work environment and Gender?

- **First, we need to understand Gender issues**
- Gender relations involve attitudes, self-concepts and identity, focusing on social categories and structural relations
- Gender roles are societies expectations of the proper behavior, attitudes, and activities of males and females (Seen differently by many)
- Gender differentiation in our culture is embedded in social institutions (family, education, religion, politics, economy, medicine and media)

Influences at work

The perspective regarding women's under confidence, may be attributed to men's overconfidence at work. Barber & Odean, 2001; Cortes et al., 2021; Niederle & Vesterlund, 2007; Soll & Klayman, 2004

Contributing Factors may be:

- **Identity** (who people are and how they are seen in terms of the group they belong)
- **Power** (the ability to direct or influence)
- **Privilege** (an advantage others lack)

The Confidence Gap Research

- Gender stereotyping inaccurately distorts views of the strengths, talents, and expertise of women.
- Stereotypes can be self-inflicted wounds when women buy into them, whether consciously or unconsciously.
- They are especially problematic for women because, if believed, they can create a poor self-image that impacts the ability to advance professionally.

Teller, K and Lyerly, E. (2024)

- The fact that women have lower expectations of success than men in many areas of achievement, which might be indicative of their tendency to underestimate themselves – is well established in the literature. (Betsworth, 1999; Beyer, 1999; Kay & Shipman, 2014; Meyerson, Sternbach, Zwischenberger, & Bender, 2017) Herbst, T. H. (2020). Sarsons, Heather, and Guo Xu. (2021)
- **Gender is an important variable to keep in mind while trying to motivate a team because it can determine a person's assertiveness (or lack thereof) and in turn create a confidence gap between genders within the workplace**

- **While levels of self-confidence can be shaped by social contexts and personal experiences, women can also choose to strive to be more confident—to check patterns of self-doubt, to mindfully decide to take more risks, and to push to take on challenges**

Wolak, (2020)

Women face two unique challenges in the workplace that mentors can help them overcome

(Insala, 2017 & 2019)

- 1) **Lack of confidence:** women [often] underestimate both their abilities and their performance
- 2) **Poor self-advocacy:** Women are happy to advocate for others, but they are often uncomfortable advocating for themselves

Managing to clear the air: Stereotype threat, women, and leadership

Hoyt & Murphy, (2016)

- Awareness of unconscious biases and unwarranted stereotypes that affect the evaluations of others
- **Self-efficacy and self-esteem are important components of self-confidence (Kane, Yarker & Lewis, 2021)**
- Increasing opportunities and representation
- Presenting stereotype inconsistent information in order to help reduce stereotyped thinking
- Growth and development mindsets and behaviors
- Making explicit the characteristics of good leadership that avoid stereotyped descriptions

The importance of feeling respected for women in male-dominated fields wherein women often face discriminatory and exclusionary treatment.

Moser, C. E., Watkins, E. C., & Branscombe, N. R. (2025)

- Underrepresentation communicates lack of belonging to women and decreases women's confidence.
- Outside of impacting women's self-perceptions and sense of belonging, women in these fields also experience differential treatment from colleagues.
- This often results in isolation hostility, and lack of support from colleagues.

- Women in male-dominated environments often experience identity-threat, which occurs when a member of a marginalized group anticipates negative treatment on the basis of their identity (Steele & Aronson, 1995)
- One way that workplaces can signal that marginalized employees are respected and valued is through identity-safety cues.
- Identity-safety cues are environmental characteristics that communicate that a person's identity is valued, which promotes belonging and trust among employees (Johnson et al., 2019; Pietri et al., 2018).
- One such identity-safety cue is allyship from men (Moser & Branscombe, 2022, 2023; Radke et al., 2020).

- An ally is an individual who works alongside disadvantaged group members to reduce discrimination and promote social justice (Drury & Kaiser, 2014)
- One reason allied men are more effective in signaling inclusion than allied women is that men are perceived more positively and taken more seriously when advocating for gender equality than women (Gulker et al., 2013; Hekman et al., 2017).

- Given their status as the primary beneficiaries of gender inequality, men are perceived as acting against their own self-interest when advocating for gender equality.
- Acts counter to one's personal or group interest are viewed as more persuasive than acts consistent with one's self-interest (Eagly et al., 1978).

Allyship influence is a central reason why men are especially effective as allies and can communicate that women will be respected in an organization.

W. Brad Johnson and David G. Smith
Harvard Business Review

March 13, 2017

- Strong leadership can set the right tone for genuine gender inclusion.
- **This includes being purposeful in creating a workplace environment where women feel they belong and are accepted as full members, and are not intentionally or inadvertently excluded, objectified, or sexualized**

- There is a profound distinction between **passive gender inclusion** (attendance at diversity and gender workshops, working to avoid harassment and bias in one's own relationships)
- And **active gender inclusion** (demanding respect and equity for women, in both word and deed, especially when no woman is watching)

Gender-blindness

(Martin & Phillips, 2017)

- A strategy that advocates for the downplaying of difference and focus on similarities between men and women
- Increases a women's perceived fit and therefore confidence in workplace environments
- The effects of gender-blindness were especially helpful for women in masculine contexts
- In addition to confidence, we find gender-blindness affected action-taking through a two-step process, such that gender-blindness increased women's identification with agency, which in turn increased confidence, and led to action taking

The Four Traits of Confidence: Growth Mindset, Courage, Grit, and Self-Compassion

Kosterlitz, (2015)

Trait 1: Growth mindset--the belief that with effort you can succeed.

Trait 2: Courage--the "heart" to take action to achieve your goals. Courage enables action, even in the face of fear and self-doubt..

Trait 3: Grit--the ability to persevere when the going gets tough.

Trait 4: Self-compassion--handling your missteps with kindness. Self-compassion is being kind to yourself when you fail or make mistakes.

Facts, nuance, variables, and context

Everyone is an Individual; everyone is a work in progress

Are women expressing a lack of confidence, or are men expressing overconfidence in their work?

One person's Overconfidence is not to be mistaken for lack of confidence in another.

Gender Differences in Climbing up the Ladder: Why Experience Closes the Ambition Gender Gap

Wald, K., Abraham, M., Pike, B., & Galinsky, A. D. (2024)

- Women are unequally represented in the highest positions in society
- Beyond discrimination and bias, women are missing from the top because they are less likely to pursue high-ranking opportunities

Findings suggest experience, and the self-confidence that comes with it, is one lever for closing the gender gap in seeking to climb professional hierarchies

Building Confidence in your Subordinates

We all must be better tomorrow than we are today

- In our craft, there no such thing as the top of the Mountain...
- If you get to the top of the Mountain your buried.
- The mountain never stops; the climb is never over.

Dynamics of change, new insights, new technologies, new science, new practices, understanding and returning to old practices.

Leaders must adopt, promote, sustain and require a “growth mindset”

- Leaders increasingly must be able to humbly show their followers how to grow by admitting what they do not know, modeling teachability, and acknowledging the unique skills, knowledge, and contributions of those around them.

Owens & Hekman, (2012)

“Knowledge has to be improved, challenged, and increased constantly, or it vanishes.”

Dr. Peter Drucker

Create a Culture for Constant Learning and Reaffirming

- Watch for mistakes in other agencies
- Study them
- Discuss them with your staff
 - Ask the what ifs?
 - Could this happen to us?

In preparing for battle I have always found that plans are useless, but planning is indispensable.

----- Dwight D. Eisenhower

Mindset: The psychology of success

Carol Dweck
Stanford University

- The importance of an open and learning mindset in leadership
- Each organization either has a learning orientation or a learning disability
- A “growth mindset,” relates to one’s ideas about the nature of intelligence
- A positive and efficacious sense of self and confidence in the ability to engage with and contribute to the world
- Recognize that accomplishment is built upon sustained effort and hard work

Leaders captaining their enterprises must learn to successfully navigate complexity by:

- *Reframing what they see*
- *Rewiring what they think*
- *Reconfiguring what they do*

To ensure that their organizations operate in a perpetual state of readiness for the unexpected

21st Century technologies have changed everything

- ❑ Regarding how people receive and gather information (how we think and work)
- ❑ Information is real time
- ❑ Information is observable
- ❑ Information is more assessable (**good and bad**)
- ❑ Information is more manipulated and focused
- ❑ Information has more value and profit production

Examples: From smart phone proliferation, to quantum computers, to artificial intelligence (AI)

Technologies Influence on our culture

We have a dysfunctional relationship with reality

In the information age, truth and untruth exist at the same level of authority it is difficult for people to judge --Salman Rushdie

- **Single perspectives and lack of contextual features (e.g., video)**
- Speed of notifications and responses
- No personal interaction (relationship)
- No filters or verifications (propaganda or rumors)
- Ideology driven (Tribal polarization)
- Emotionally driven
- Victim to the bias (confirmation, sample, etc.)
- Mega-processing

- A billion hours ago, modern Homo sapiens emerged
- A billion minutes ago, Christianity began
- A billion seconds ago, the IBM personal computer was released
- **5.6 billion Google searches ago...was this morning**

Hal Varian, Chief Economist Google

“The Internet is the first thing that humanity has built that humanity doesn’t understand, the largest experiment in anarchy that we have ever had.”

Eric Schmidt, Former Executive Chairman of Alphabet Inc.

“There are known knowns...These are things we know that we know.

There are known unknowns...That is to say, there are things that we know we don't know.

But there are also unknown unknowns. There are things we don't know we don't know.”

Donald Rumsfeld

When inaccurate or wrong information is repeated, *an illusion of truth* occurs:

People believe repeated information to be true — even when it is not.

MIT Sloan (2022) and Unkelbach, Koch, Silva, et al., (2019)

- Misinformation, regardless of whether it was mistakenly passed along or shared with ill intent, obstructs good decision-making
- We have a tendency to perceive repeated information as more believable than information we hear for the first time, regardless of whether the information is in fact true
- Repeating false information can create at least an *illusion* of truth

Decontextualization

- When things are viewed from a single subjective perspective, absent any objective evaluation from the totality of all the facts and circumstances
- Then reduced to a simple proposition or solution from a very contextual, complex, and complicated situation
 - Lack of specificity
 - Advocacy over objectivity (Not taking enough time to form thoughtful questions)
 - Our biases (Confirmation, sample, and group think)

Three contributing factors for this phenomenon:

- ***Competitive Market*** (*social media and earned media speed and content*)
- **MONEY \$\$\$** (Revenues from advertisements and viewer ratings)
- **Promoting an Ideological agenda**

Artificial Intelligence (AI)

Deciphering Deception: How Different Rhetoric of AI Language Impacts Users' Sense of Truth in LLMs

Yoo, D., Kang, H., & Oh, C. (2024)

- **User expectations greatly influence trust in AI outputs, preferring technical over human-like responses for truth discernment**
- **Rhetorical elements impacted perceived truth more than actual veracity; false ChatGPT statements are deemed truer than accurate Google results**
- **AI communication with rhetorical elements amplified perceived trustworthiness, logic and transparency**
- **Prior knowledge does not consistently improve users' truth discernment; at times, users trusted AI more when it aligned with prior knowledge, even if false**
- **Users applied human communication heuristics and biases when judging AI, like associating detailed responses with truth**

The Dangers of Critical Disengagement

“No Independent Thinking”

Increased use of generative AI is associated with:

- Lower levels of academic performance
- Lower levels of higher order critical thinking and higher order thinking skills
- Higher levels of procrastination
- Increased levels of memory loss

Essien, Bukoye, O'Dea & Kremantzis (2024) & Thinga (2024)

Leaders and Managers

Yoo, D., Kang, H., & Oh, C. (2024)

- **Be aware of the potential for AI-generated language to influence decision making and perceptions within the organization**
- Establish clear guidelines and policies for the use of AI in internal and external communications
- Ensure transparency and accountability in AI-assisted processes to maintain trust among employees and stakeholders
- **Foster a culture of critical thinking and encourage employees to verify information from AI sources**

What's our Problem

by: Tim Urban

2023

- **When thinking like a scientist:** the goal is to obtain knowledge and understand the truth, no matter where it takes us.

That means gathering and evaluating information, forming hypotheses, and testing them without bias.

- **When thinking like a sports fan:** we have a clear bias and want a particular “team” of ideas to win.

Yet, we want the game to be played without corruption so we can say that our team won fair and square.

- **When thinking like an attorney:** our opinion is already formed and evidence supporting that opinion is constantly sought, while anything that contradicts it is conveniently ignored.
- **When thinking like a zealot:** there's no consideration for any other opinion.

Beliefs are treated as sacred ideas that must be protected, with 100% conviction.

What's our Problem

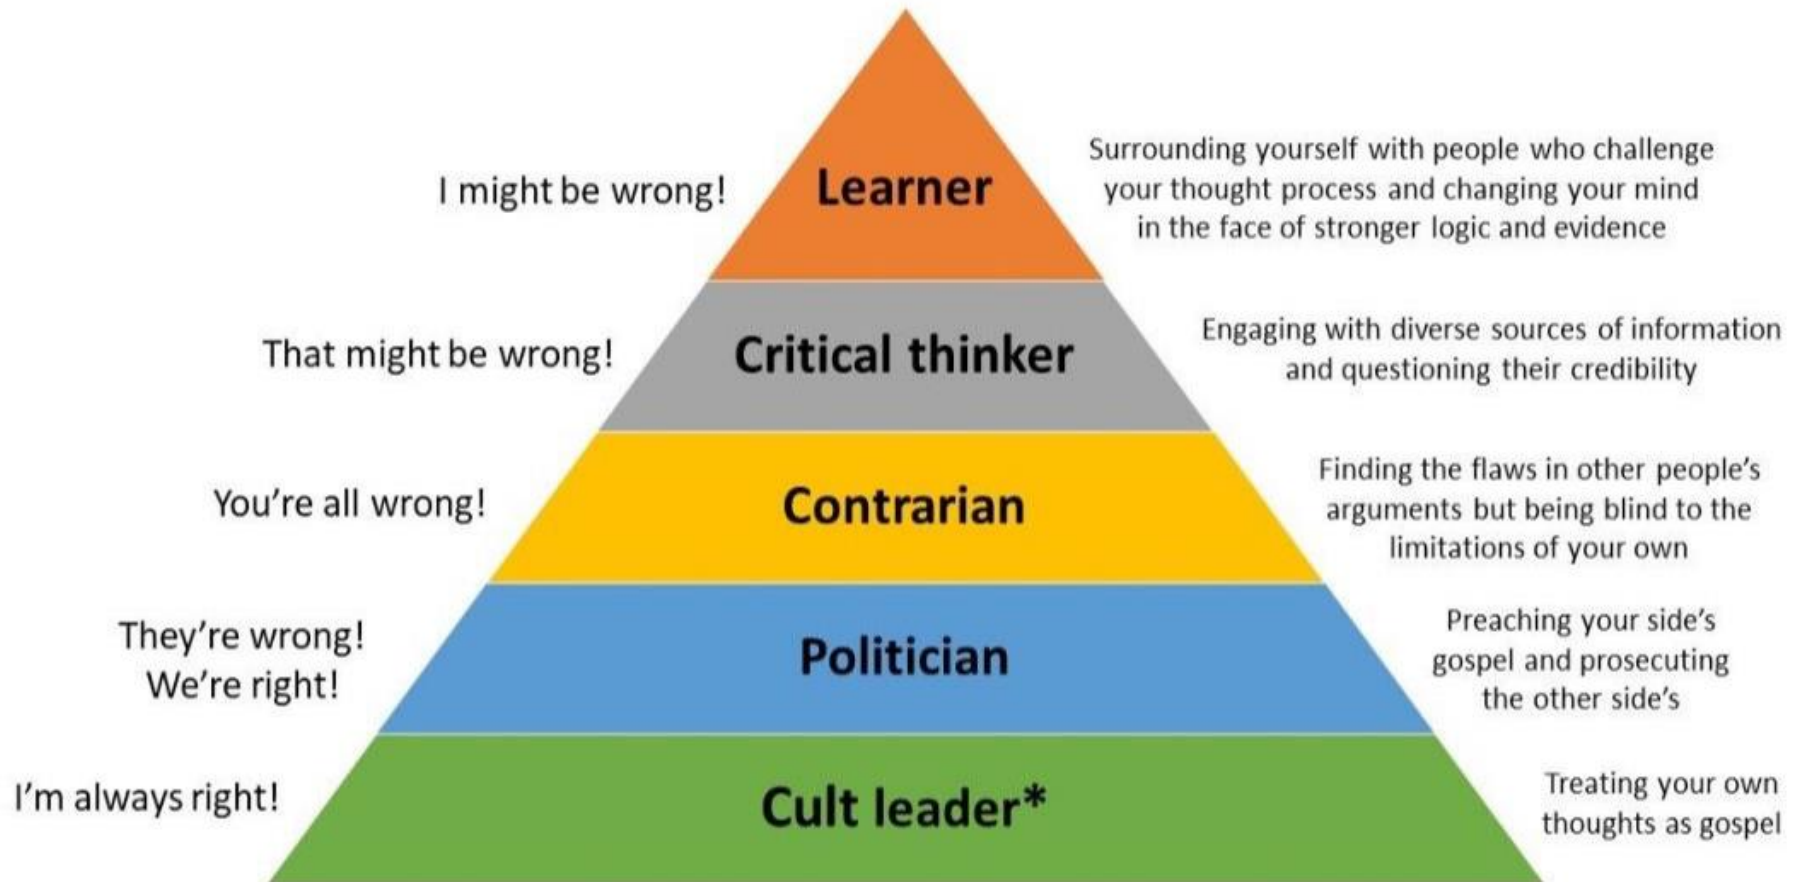

by: Tim Urban

2023

- Our behavior is influenced by a combination of our **primitive mind** (*limbic system*) and our **higher mind** (*prefrontal cortex*).
 - The primitive mind is concerned only with survival
 - The higher mind is responsible for more complex thinking that requires effort.

- ***The higher mind keeps the primitive mind in check, our thought processes operate in a reasonable and rational manner***
- **When the primitive mind takes control; our thinking becomes obstinate and tribal.**
 - When the primitive mind perceives danger, it reacts as if it's a life-or-death situation.
 - It's not very good at distinguishing real danger from imagined danger.
 - Adhering to the tribe's beliefs was essential for survival
 - Without understanding context, such beliefs can lead to closeminded ignorance, stupidity, aggression, and even hostility.

A Hierarchy of Thinking Styles

*Does not apply to my spouse,
who actually is always right

Bullshit, Bias, and Noise

The Operational Realities of Judgement

“Bullshit is unavoidable whenever circumstances require someone to talk without knowing what they are talking about. Thus, the production of bullshit is stimulated whenever a person’s obligations or opportunities to speak about some topic exceed their knowledge of the facts that are relevant to that topic.”

**Frankfurt, Harry G. (2005) *“On Bullshit.”*
Princeton: Princeton University Press.**

Frankfurt's (2005) conception of bullshit as an absence of concern for the truth

- **Like other irrational beliefs, bullshit is a real, prevalent, and consequential phenomenon**
- **Due to this prevalence and potential for harm, the ability to recognize and avoid bullshit is an essential skill to have in today's world**

Walker et al. (2019)

While many people may believe that they can reliably detect and resist bullshit, empirical findings suggest otherwise Pennycook, Cheyne, Barr, Koehler & Fugelsang, (2015a); Pennycook & Rand, (2018); Pfattheicher & Schindler, (2016); Sterling, Jost & Pennycook, (2016)

Bullshit receptivity

Tracy, R. E., Porot, N., Mandelbaum, E., & Young, S. G.
(2023)

- One of the central concepts in the research around mis- and disinformation in organizations is that of 'bullshit receptivity'
- Bullshit receptivity refers to the tendency of individuals to perceive vague, ambiguous or meaningless statements as profound or meaningful
- **Bullshit receptivity is influenced by various cognitive factors, such as intelligence, critical thinking abilities, openness to experience and individual differences in information processing styles, including a reliance on intuition versus analytical thinking**

- Some individuals are more accepting of information without deliberation, showing chronic reflexive open-mindedness
- This makes them more receptive to bullshit.
- Belief-default models suggest that people initially accept information automatically and require effortful cognitive processes to reject it
- Dual process theory has shown that type 1 processing (intuitive) leads to belief acceptance, while type 2 processing (analytical) is necessary for belief rejection
- **People less inclined to engage in type 2 processing are more susceptible to bullshit**

BE CANDID regarding your knowledge base

When you do not know...say you do not know.

Never lie, mislead or BS

Specificity is the anecdote to Bullshit

Bias and Noise

Kahneman, Sibony, and Sunstein, (2021)

In the mathematics of accuracy, there are two types of error which are equivalent:

- The average of error, which is bias
- The variability of error, and that's noise

Noise: is the undesirable or unwanted variability in a final integrated judgement or decision.

lack of consistency or fixed pattern; liability to vary or change

System noise – the variability in decisions arising in systems meant to produce uniform judgements.

NOISE

The variability in judgments that should be identical.

ACCURATE

Aiming for bullseye but hitting all over the place

NOISY

BIASED

Focused (tightly grouped)
on wrong target

BIASED & NOISY

Noise

Formula to mitigate noise

Aggregate independent observations:

- **Decomposition** (break decision down into components “mediating assessments”)
- **Independence** (information collected and evaluated separately)
- **Delayed holistic judgement:** (Do not exclude intuition, but delay it)

Today's Public Safety Leaders

- Must learn and know their job to make informed decisions, provide advice and mentor and not be influenced by **bias, drawn to bullshit, or swayed by noise.**

In contemporary landscape the ranking officer may not be seen as the smartest or best informed in the room

Experience alone is no longer enough...we must be continuously be educated regarding the operational realities of our job

"We must reevaluate our experience in the here and now"

This requires "DOMAIN SPECIFIC COMPETENCY"

Context and the Danger of Assumptions

Every Leader must develop and sustain an investigative discipline

- **Everything is complex, complicated, and contextual:**

- *Different dynamic variables*
- *Interconnected in an ecosystem*
- *Constantly evolving (change)*

- **Our Basis of Knowledge:**

- *How do we know what we know?*
- *Is it objective and reliable?*
- *Is it current?*

Higher Order Thinking: confident humility, on-going feedback loops, objective knowledge base, specific research, and credible sources are so important

Evaluating the Issues

Adapted from: Bevan, G. (2024)

- **What is known?** What facts and evidence exist to support a narrative and how is it known
- **What is not known?** Identifies gaps in knowledge or evidence. Opens further lines of inquiry to fill those gaps
- **What are the consistencies?** What are the different pieces of information that when taken together are consistent with a particular hypothesis?
- **What are the conflicts?** Recognizing conflicting information causes an investigator to consider any narrative against the information that does not fit rather than simply dismissing it

This meta-analysis provides definitive empirical validation that knowledge-based strategies deliver superior and sustainable returns.

Bergh, D. D., D'Oria, L., Crook, T. R., & Roccapiore, A. (2025)

- A large scale 2025 meta-analysis (analyzing 348 studies encompassing 248,136 organizational level observations and 32 years' worth of data) has looked at whether knowledge still truly represents the most strategically important resource for organizations
- Knowledge delivers 8x greater performance impact than the next most effective resource category when averaged across all performance measures.

Oxford Review research special report (6-30-25)

- Knowledge is uniquely linked to growth.
- It is the only strategic resource type showing positive associations with growth performance.
- Knowledge acts as a foundational resource functioning as organizational "glue" that enhances the effectiveness of tangible, intangible and relational assets.

Data vs. Information vs. Knowledge: What's the Difference?

Data

Raw facts,
without
context

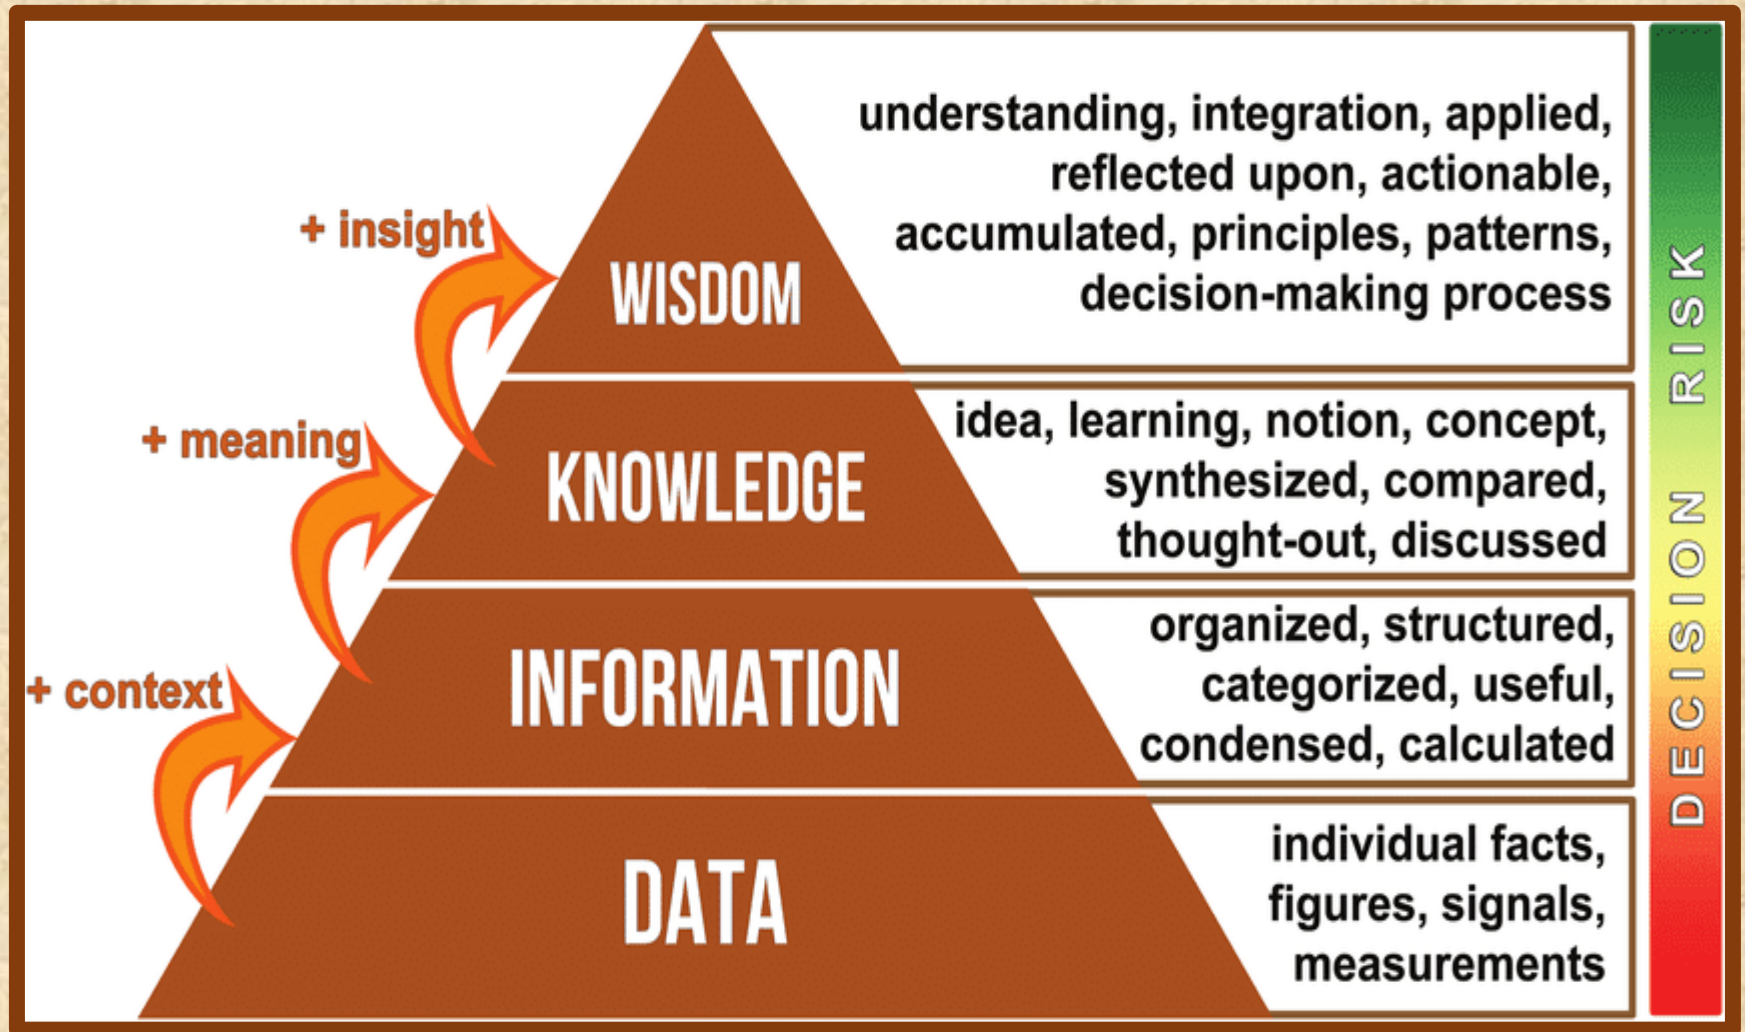

Information

Data organized
in a meaningful
way

Knowledge

Insights
derived from
information

Data

Information

Knowledge

Insight

Wisdom

Conspiracy Theory

You must know the evidence is sufficient to have established an objectively true understanding of the natural world and then move on.

- If people don't have those tools to make that judgement, then they will think they are being bravely skeptical and open minded by standing in denial of what entire bodies of scientific evidence produces.
- That's an aspect of it.
- Not only that, but we also live in a world where because the internet connects us all and social media makes us all friends.

- You can type in any crazy idea you have, and it will find every other person in this world who shares that crazy idea.
- You will even find the websites that extoll that crazy idea and you will believe that you're on to something, simply because other people have affirmed what you think is true.

Neil deGrasse Tyson, (2024)

Transformation to Contemplation

A sustained practice for providing space and time for detached thoughtfulness

Rohr, R. (2022)

Often, regular thought becomes our emotional or narcissistic reaction to the moment (*what threatens or attracts us*)

- ***Don't get caught in "dualistic" thinking***
- *Being patient in the face of mystery*
- *Use the non-dualistic mindset that stays still, sees everything, but let's go, not judgmental or opinionated*
- *The fallacy is we think we are our thinking which is unstable with no ground in which to stand*

We must detach before we can properly attach

Bring forth and sustain a critical mind

- Humility is key (knowing you don't know)
- You detach before you attach
- Take the time to objectively observe and learn from the realities around you
- See with fresh eyes, question your assumptions
- It's all about how you see things outside and beyond yourself

“The power of objective thinking”

Humility is a crucial nutrient for the mind

- **Arrogance is ignorance plus conviction**

“While humility is a permeable filter that absorbs life experience and converts it into knowledge and wisdom, arrogance is a rubber shield that life experience simply bounces off of” --- Tim Urban

- **Seek confident humility:** where we have faith in our capability while appreciating that we may not have the right solution or even be addressing the right problem
- This gives us enough doubt to *reexamine* our old knowledge and enough confidence to pursue new insights

**No one of us, is as smart as all of us,
collaboration is key...**

We must balance advocacy and inquiry

The continuum

A confident humility

The Key is Active Learning, Critical Thinking and Active Open-Mindedness

Leigh, (2007)

Sustain a state of “active open-mindedness” Baron,
(1994)

- The focus is on rigorous testing of a view, argument or belief
 - The ability to integrate new information into your current set of beliefs
 - The willingness to change your existing beliefs according to the strength of evidence that supports them
- Resisting intuition or confidence in order to delay judgement until all facts can be gathered (Kahneman, 2021)

Nurturing an inquisitive mind

Creating a safe space for questions and exploration

Encouraging curiosity and wonder

Modelling inquisitiveness

Valuing the process of inquiry

Providing opportunities for open-ended exploration

Scott-Barrett et al 2023

PRACTICAL EXERCISE

“Foxes and Hedgehogs”

- A dichotomy that is meant to evaluate two perspectives consistent with character and cognitive styles of individuals in positions of authority within organizations
- Two opposing world views that may be useful in thinking about human nature (Zaleznik 2008)
- Classified along a spectrum between hedgehogs and foxes (*from Isaiah Berlin essay on Leo Tolstoy*)

“The fox knows many little things, but the hedgehog knows one big thing.”

-- Archilochus

How Foxes Think

Multidisciplinary –

Finding a diversity of perspectives. Looking outside of their comfort zone to whatever different methods might work better than the current ones.

Adaptable –

Change is the Only Constant. When something works, it could work better differently, when something doesn't work then a new method might work better.

How Hedgehogs Think

Specialized -

Loyal to their current data and skills. They focus on how things they know they can do may be used instead of learning new skills that might be better suited to a new environment.

Inflexible–

They stick with “The way it’s always been.” Change for when necessary or forced, and only as a way to refine the status quo for now, not create a new approach for each new problem.

How Foxes Think

Self-critical –

Constantly evaluating themselves and open to criticism. Learning about where they failed gives them a chance to transform and improve.

Tolerant of complexity –

They are aware that they don't know all the variables, and they may never know them all. They know that one solution will not fit all problems and some problems have multiple sources that need different solutions.

How Hedgehogs Think

Stubborn –

Their mistakes are blamed on bad luck or on peculiar circumstances. (“A good model had a bad day.”)
A prisoner of their own experience or ideology.

Order-seeking –

They believe every problem has a clearly defined solution. One system can be shoehorned to fit any environment and that variables and complications are bound to have some uniformity between them.

How Foxes Think

Cautious –

They never think “yes or no”, but instead “It depends.” They are constantly changing their outlook based on new information and context.

Empirical –

They rely on research and objective observations not on the expectation, but on “what we know right now suggests.” They see the trees, then decide if it’s a park or a forest.

How Hedgehogs Think

Confident –

They rarely hedge their predictions and are reluctant to change their minds or outlooks. Often, look for confirmation instead of refutation.

Anecdotal –

They are Fixed to their beliefs. They expect that if something doesn’t fit their expectations that they just don’t have the full picture yet. They look for the forest when they see a tree.

- Foxes are better forecasters
- Hedgehogs are more decisive and see everything through the lens of a single organizing principle
- Hedgehogs take risk and move forward; foxes are more cautious and calculative as they proceed
- Hedgehogs take a narrow view, while foxes embrace a more integrated perspective
- Both cognitive styles are essential keys to maneuvering in, and navigating through the evaluation of any issue
- **“It’s not what they think, it’s how they think”** (Tetlock, 2005)

CRITICAL THINKING

Understanding what it is

Skills Development

Developing Critical Thinking

Developing Dispositions

Manage a Culture of Ignorance

- **Ignorance:** is usually seen as information or knowledge, and it tends to occur when a person simply does not possess the relevant information.
- **Benign ignorance:** where knowledge is simply absent.
- **Innocent Ignorance** refers to the state of being unaware of something without malice or intention to deceive
- **Culpable ignorance:** where an individual has access to knowledge but chooses to ignore it or reject it for whatever reason.
- **Willful ignorance:** where individuals deliberately avoid information that contradicts their beliefs.

Well Trained Public Service Professionals

By Fredrick Mosher

“Have perspective on themselves and their work, and on the social and political contexts in which they find themselves working”

Content and Context

- ❖ The same **"content"** may have a totally different meaning (or function), if it is put in a different **"context"**
- ❖ This difference of meaning, function or process is closely related to the concepts of the totality of the facts and circumstances in a given situation, issue, incident or event.
- ❖ The same features can have a totally different function or meaning, depending on which logical type they are situated in.
- ❖ Interpretation may result in objective characteristics or subjective feelings or both

CONTEXT *The Interrelated conditions in which something exists or occurs*

- How it is viewed (Importance of perspective)
- How it is interpreted (Depends upon how it is viewed)
- How it is defined (The definition relies upon the rules and competency of fact patterns)
- How it is described (We construct our own realities)

Context is Critical to Sense-Making

- Be able to see the context from multiple angles
- That ability to evaluate those perspectives combined with a heightened sensitivity of awareness
- The way we learn and interpret things helps to shape understanding and influence behavior

Knowledge nexus to Understanding

- Must pursue the unification or connectedness of knowledge
- **The key to understanding anything is to understand the context in which it sits**
- The contextual richness requires:
 - The identification and objective understanding of all the variables
 - Their synthesis and analyzation
 - Their evaluation and interpretation
- **Contextual knowledge:** Knowing the bigger picture, knowing the way all the pieces fit together and how they influence change (key to understanding)

SIX KEY SKILLS

- **Awareness:** seeing, noticing, and identifying things
- **Absorptive capacity:** the ability to value, assimilate and apply new knowledge for learning and problem solving (Cohen and Levinthal, 1990; Kim, 1997; Volberda, Foss, and Lyles, 2010).
- **Cognitive control:** helps individuals in overcoming automatic response sets (Diekmann, 1982), in favor of a more appropriate contextual response (Reder & Schunn, 1999)
- **Cognitive flexibility:** ability to cognitively control and shift mental mind set (Canas, Quesada, ~ Antol'ı, & Fajardo, 2003)
- **Managing tension:** addressing disagreements and conflicts in a constructive way to foster a positive team environment

A (2023) study looking at the relationship between cognitive flexibility, emotion regulation capability and relationship quality has found that:

Dr, David Wilkinson, Oxford Review

- Higher levels of both cognitive flexibility and emotion regulation capability each independently predict better relationship quality
- An individual's level of cognitive flexibility predicts their level of ability to regulate their emotions
- Lower cognitive flexibility leads to greater emotion dysregulation, which in turn can lead to more relationship problems

Why this matters:

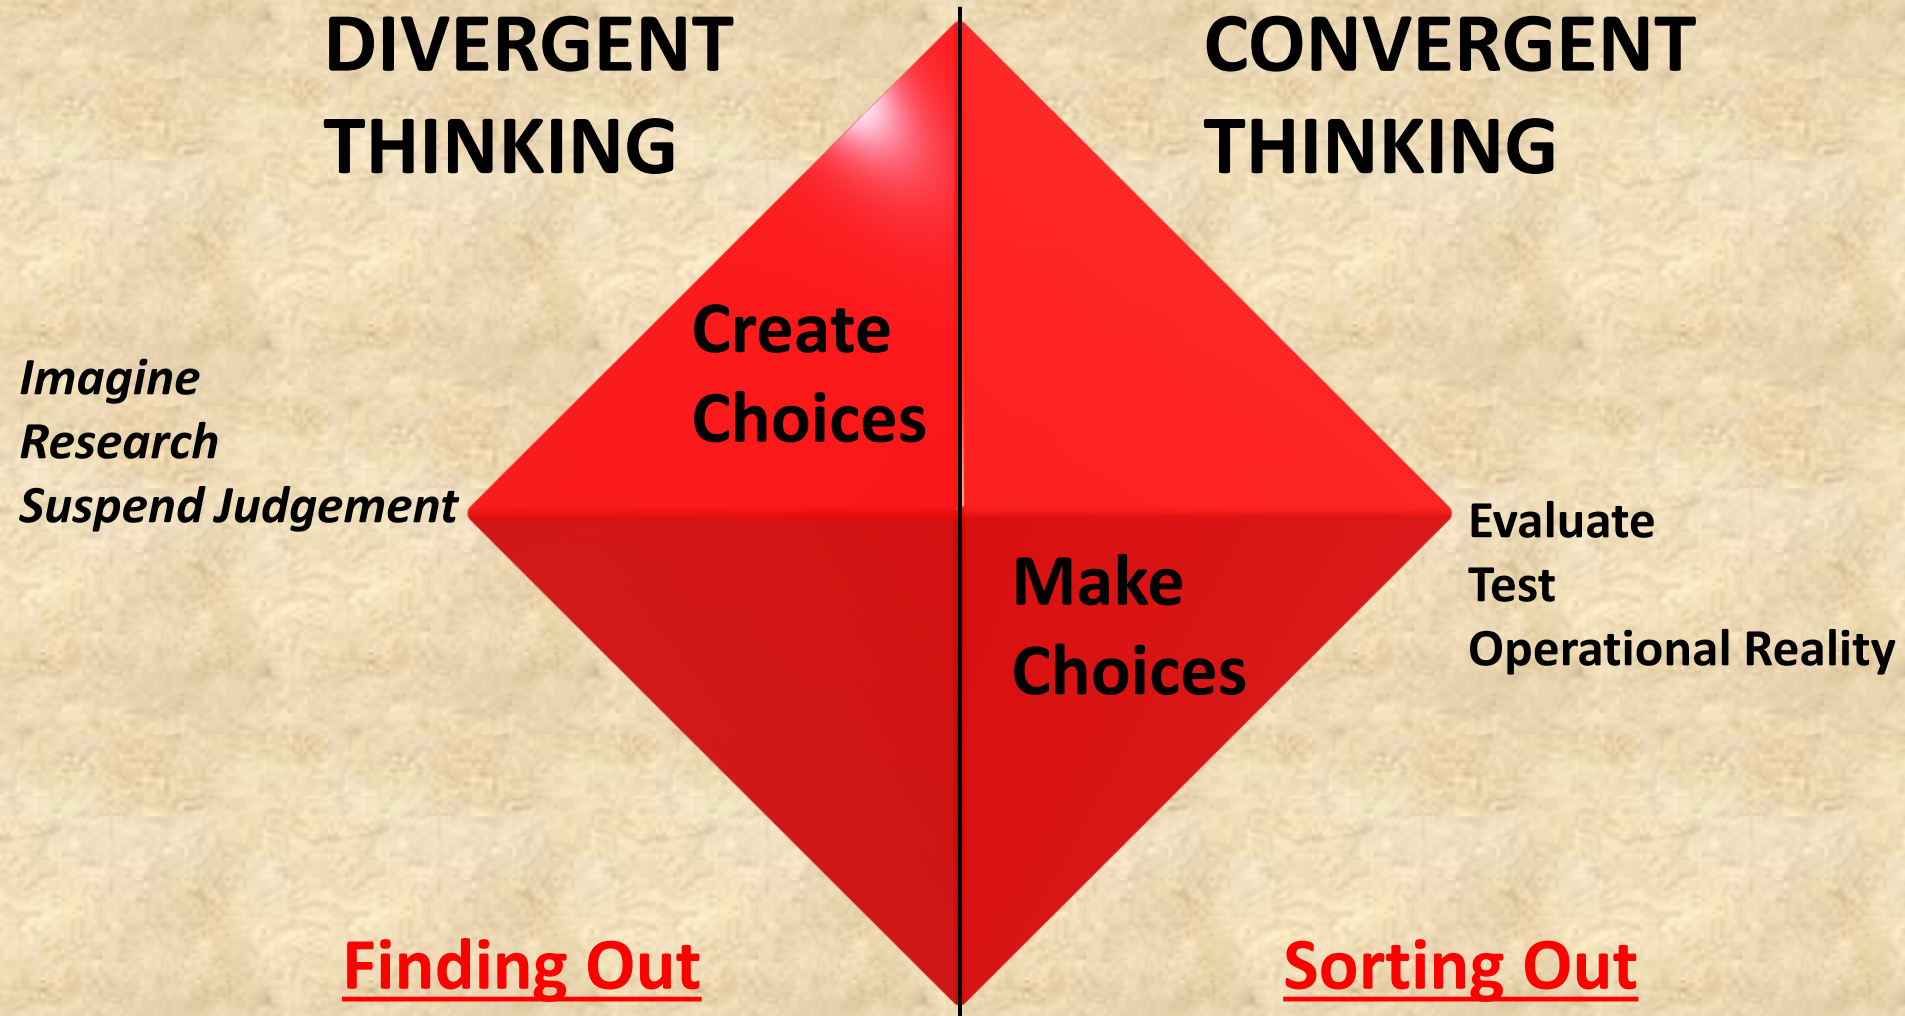

- This matters, because, in most humans' cognitive flexibility and emotion regulation capability can be increased, suggesting that relationships should improve as a result, this being a key factor at work.

Key Points

Grant, A. (2024)

- Changing your mind can demonstrate wisdom
- Realizing you were wrong does not mean you lacked intelligence or judgement
- **It means you lacked knowledge**

Listening and Thought Process

Cognition is beyond just thinking

Awareness and Knowledge

Awareness of one's own cognitive processes, abilities, strategies, as well as affective states

Regulation and Control

The monitoring and control of one's cognitive activities, adjusting tactics, evaluating outcomes, thinking through strategies

Metacognitive Experiences

Subjective feelings and affective states that accompany and inform cognitive processes, like feelings of knowing, confidence, uncertainty, or difficulty

Metacognitive Beliefs

How our beliefs or theories about one's own cognition influence how one approaches learning or thinking/decision-making and judgements
One's values as well

Metacognition Improves Problem-solving and Decision-Making

- Awareness of uncertainty and what we don't know
- Identifies confusions
- Accuracy of interpretations or fact-based assumptions
- Integrates reflection and reflexivity
- Enhancing the ability to regulate emotions
- Checks bias

Improves critical thinking ability by supporting the needed critical thinking dispositions

**Facts, Circumstances
and Nuances**

Metacognition
"A critical attitude"

**Critical
Thinking Skills**

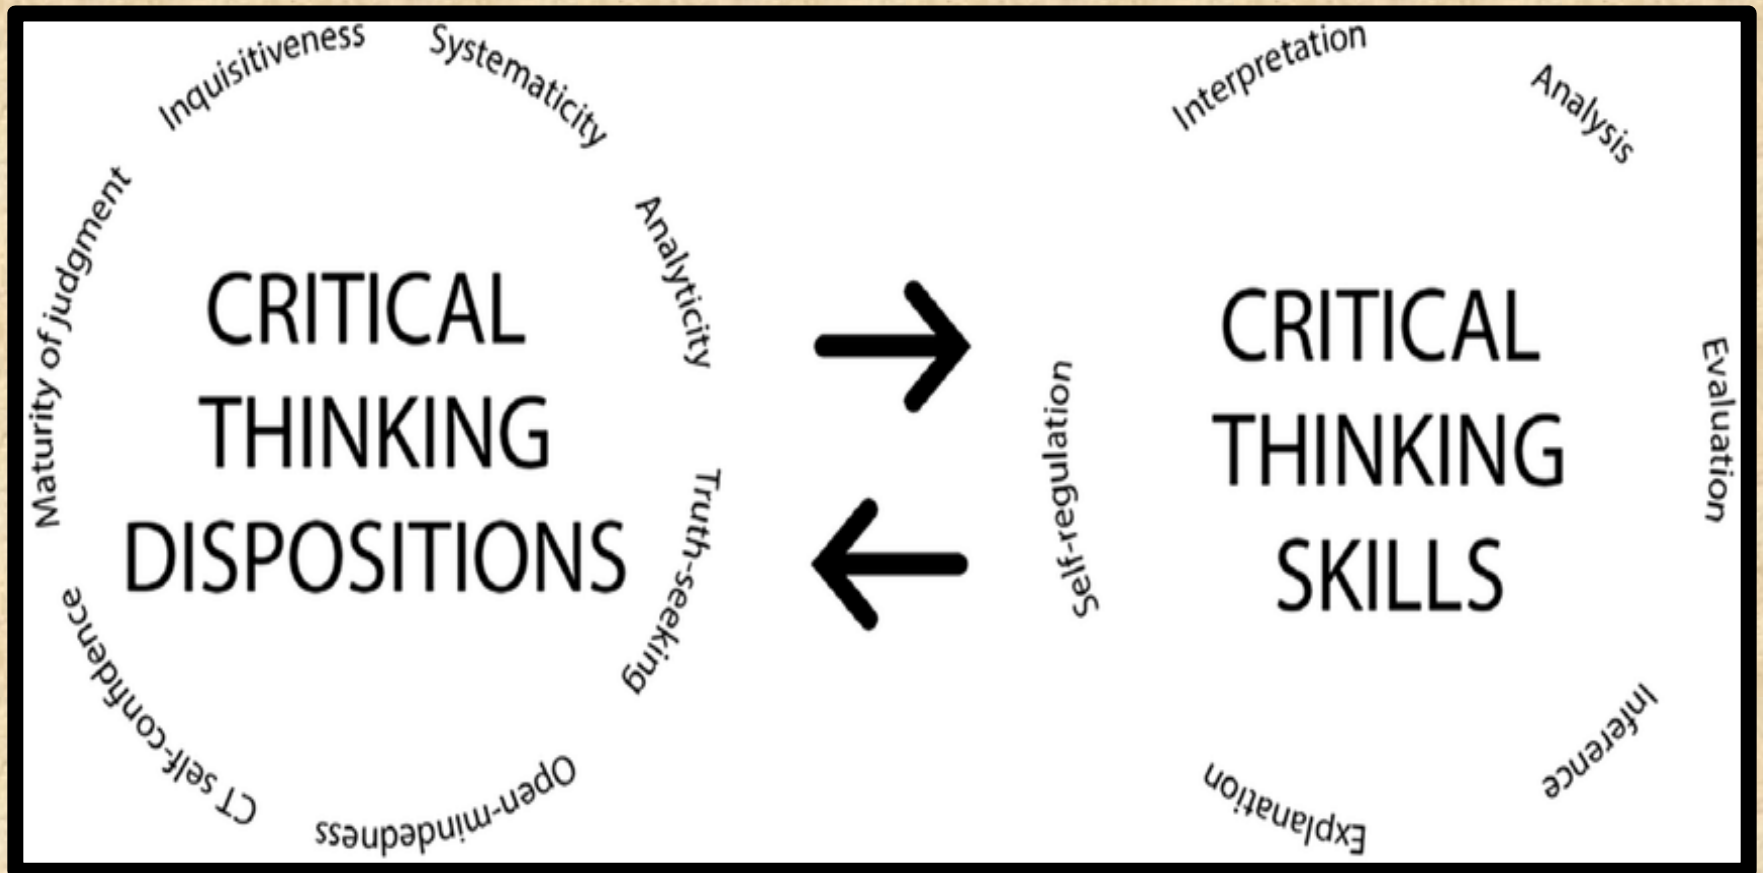

**Critical Thinking
Disposition**

Critical Thinking

Wilkinson, D. (2024) Oxford-Review

- A multifaceted set of *cognitive skills* and *dispositions* that enable individuals to:
 - Evaluate, analyze and synthesize (recognize patterns, relationships, dependencies, understand meaning and significance) information
 - Including the quality or evidence-base of the information in order to make well-reasoned judgements, solve complex problems and develop knowledge

Facione, (2015), Dwyer et al. (2017); van Rensburg and Rauscher (2022)

A Critical Thinking **Disposition** Includes Several Key Attributes:

Wilkinson, D. (2024) Oxford-Review

- **Open-mindedness**, or being receptive to divergent views and sensitive to one's own biases
- **Inquisitiveness** and having intellectual curiosity and a desire for learning
- **Truth-seeking**, or a courageous desire for the best knowledge, even if it undermines one's own preconceptions, thinking and previous knowledge
- **Analyticity**, which refers to valuing and prizing the use of reason and evidence to resolve problems

- **Systematic inquiry**, which entails organized, orderly, focused and diligent inquiry and examination of topics and issues
- **Self-efficacy**, which means having faith in one's ability to learn and solve problems
- **Cognitive maturity**, wisdom or prudence in making, suspending or revising judgement
 - This includes an awareness that multiple perspectives, solutions and implications are possible and can be acceptable

Critical Thinking Skills

- **Analysis:** Breaking down complex information into smaller parts to understand it better. This includes identifying assumptions, biases, and implications.
- **Evaluation:** Assessing the credibility and relevance of sources of information. This involves questioning the validity of arguments and the reliability of evidence.
- **Inference:** Drawing logical conclusions from available information. This requires recognizing patterns and making connections between ideas.

- **Interpretation:** Understanding and explaining the significance of data or information. This involves clarifying meaning and context.
- **Reasoning:** Using logical processes to come to conclusions. This includes both inductive reasoning (drawing general conclusions from specific examples) and deductive reasoning (applying general principles to specific cases).
- **Creativity:** Thinking outside the box to come up with innovative solutions or ideas. This involves being open-minded and willing to explore new possibilities.
- **Reflection:** Evaluating one's own beliefs and thought processes. This includes being aware of personal biases and the impact they have on decision-making.

It is Absolutely Critical to Remember
“PROCESS”

It is not just what you do...
it is how you go about
doing it.

The Reality Trifecta

Under the rule of “Specificity”

Edwards, J.B. (2023)

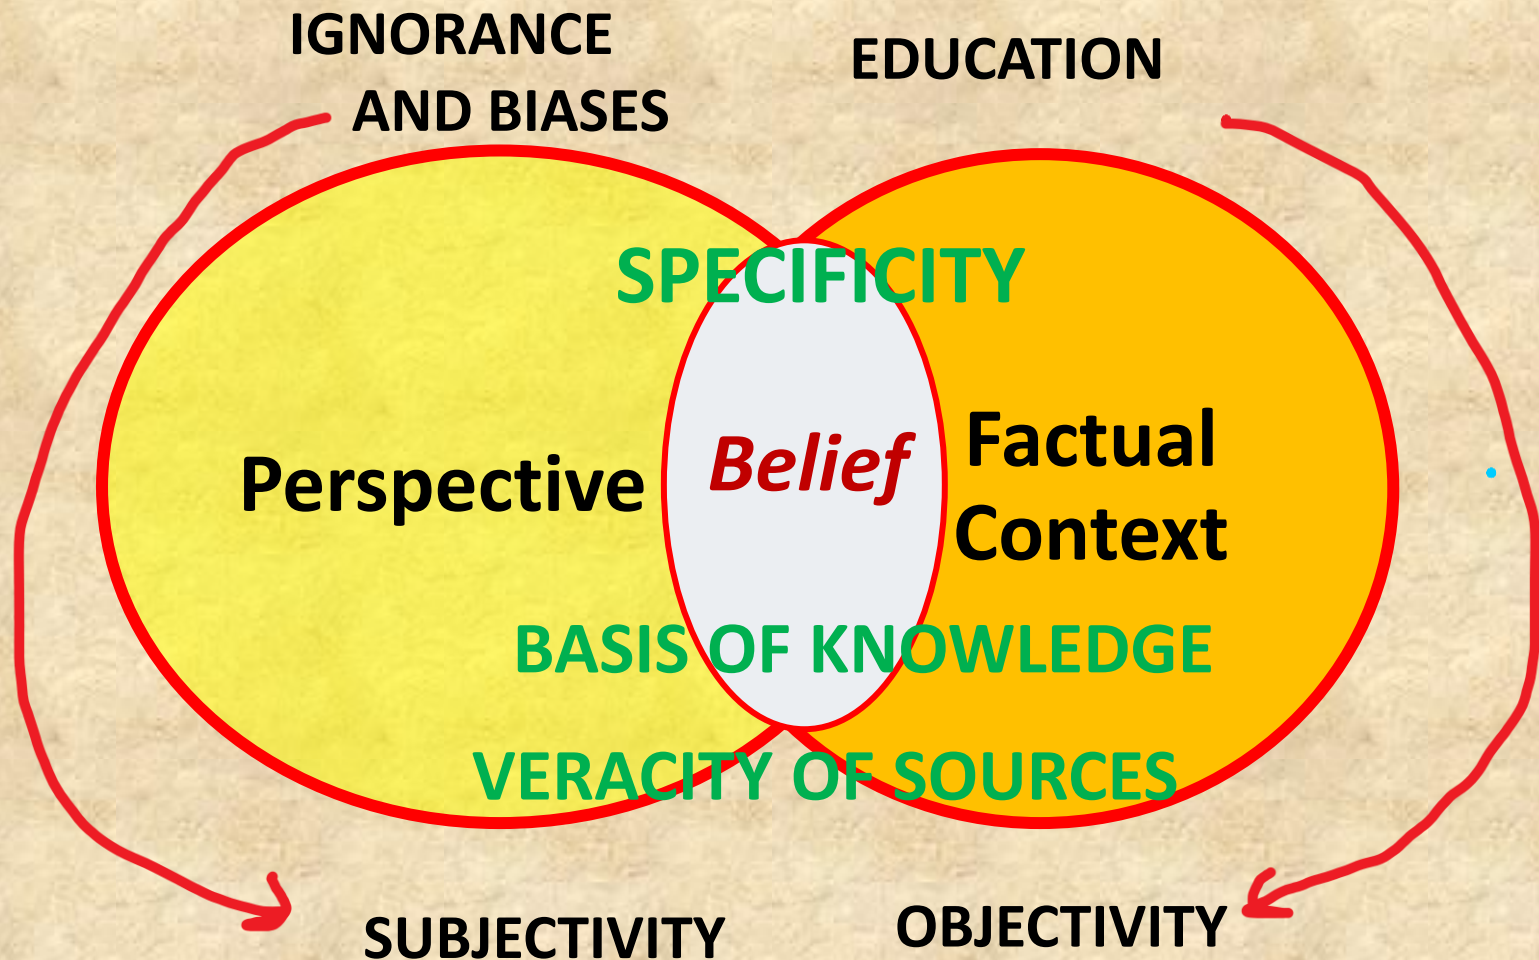

- **How do we know that?** (Basis of Knowledge)
- **What supports its credibility?** (Veracity of the information)
- **Does it fit into the big picture?** (Are the facts corroborated by other independent facts within the totality of all the circumstances)

Specificity in the Content for Credibility in the Context

Develops the Crucial Ability to Form the Next Question

To know and understand “What is important now.”

The Natural and Unnatural Context: Fact-finding

Chesterton's Fence: A lesson in second order thinking

Gabbert, B. (2020)

- **Do not remove a fence until you know why it was put up in the first place.**
- A core component of making great decisions is understanding the rationale behind previous decisions.
- If we don't understand how we got "here," we run the risk of making things much worse.

The proper perspective is found with a *“Conflict of Idea’s”*

“The real voyage of discovery lies not in seeing new landscapes, but in having new eyes.”

--- Marcel Proust

You must Challenge what you think you know...solicit other views and ideas

Create an environment for questioning and debate

- Specificity in content for credibility of context
- Objective perspective and evaluations over subjective feelings and thoughts (*fact driven process over defaulting to your assumptions*)
- Evidence based and reason driven

- One perspective provides such a limited view
- Multiple perspectives, filtered through objective analysis and pragmatic evaluation promote more accurate interpretations and sound conclusions
- We must understand and consider the environmental, cultural and historical context in the situation, then objectively interpret the issues afoot...
- Do not become trapped in paradigms of out of date, out of touch methods, practice or procedures

We always question what we disagree with, but almost never question what we agree with

The reason we want to know a lot of stuff is to be able to frame thoughtful questions to learn more.

FIVE STEPS TOWARD CRITICAL THINKING

From the Book “THE BURDEN of COMMAND”

- 1. A constantly objective and open mind free from emotion and belief-based bias***
- 2. An aggressive and proactive quest for research, inquiry, and study to identify all available facts and circumstances within a sound foundation of the veracity of all information is key***
- 3. All conclusions must be based upon facts; all claims must be supported by facts***
- 4. Work with an objective process of reasoning; include others’ opinions in the process***
- 5. Reflect on conclusions for alternate theories, ideas, and questions; anticipate both intended and unintended consequences***

My selections From Habits of Mind

16 Essential characteristics for Success

Arthur L. Costa and Bena Kallick

AND

Ten Commandments for Critical Thinking

By: Tom Chatfield

- 1. Persisting:** Sticking to task at hand; Follow through to completion; Can and do remain focused.
- 2. Managing Impulsivity:** Take time to consider options; Think before speaking or acting; Remain calm when stressed or challenged; Thoughtful and considerate of others; Proceed carefully.

3. Listening with Understanding and Empathy: Pay attention to and do not dismiss another person's thoughts, feeling and ideas; Seek to put myself in the other person's shoes; Tell others when I can relate to what they are expressing; Hold thoughts at a distance in order to respect another person's point of view and feelings.

4. Thinking Flexibly: Able to change perspective; Consider the input of others; Generate alternatives; Weigh options.

5. Thinking about Thinking (Metacognition): Being aware of own thoughts, feelings, intentions and actions; Knowing what I do and say affects others; Willing to consider the impact of choices on myself and others.

6. Striving for Accuracy: Check for errors; Measure at least twice; Nurture a desire for exactness, fidelity & craftsmanship.

7. Questioning and Posing Problems: Ask myself, “How do I know?”; develop a questioning attitude; Consider what information is needed, choose strategies to get that information; Consider the obstacles needed to resolve.

8. Applying Past Knowledge to New Situations: Use what is learned; Consider prior knowledge and experience; Apply knowledge beyond the situation in which it was learned.

9. Thinking and Communicating with Clarity and

Precision: Strive to be clear when speaking and writing; Strive to be accurate when speaking and writing; Avoid generalizations, distortions, minimizations and deletions when speaking, and writing.

10. If in doubt, wait: Pause and silence are friends of better thought (time may provide more clarity for difficult messages or may reveal to remain quiet)

11.Thinking Interdependently: Willing to work with others and welcome their input and perspective; Abide by decisions the work group makes even if I disagree somewhat; Willing to learn from others in reciprocal situations.

12.Remaining Open to Continuous Learning: Open to new experiences to learn from; Proud and humble enough to admit when don't know; Welcome new information on all subjects.

13. Know your limits: Know what you don't know, seek expertise when yours runs out (Remember...expertise is SPECIFIC)

14. Seek refutation over confirmation: any idea can endlessly be confirmed if you're only looking for support-you can convince yourself the earth is flat if you never look more than a mile away. Seek out challenges and contradictions and put your arguments and beliefs to a genuine test. If an idea or a theory cannot be tested or disapproved, it isn't worth much.

15. Beware sunk cost: once you have put time, effort, cash or care into something, it is tempting to stick with it no matter what, in order to justify your input...Don't, cut your losses, don't get shackled by the past

16. Every option you're facing can be wrong: before you choose, ask-is the best or most meaningful response even an offer? A website says you must enter your personal details or not get access. Perhaps the better choice is to reject the deal

A politician says we must either raise taxes or lower immigration, but there's no reason for you to accept either. Look outside the frame. Ask whether you're really being given a choice. Ask is there a different, better way of thinking?

DECISION MAKING

Decision Making

Preliminary Rules

- Where does your authority end or begin?
- Evaluate your roles and responsibilities
- Verify ALL assumptions
- No plan survives the operational realities. Have a series of options in mind

Rational Decision Making

Adapted from: Bardach (2012), MacRae & Whittington (1997)
and Thompson, (2002)

First, consider why and if you need to make a decision.

Don't fall victim to the action imperative "that drive to do something"

1. Define the problem and challenge assumptions
2. Follow a critical thinking process (with a range of diverse perspectives)
3. Identify the goals and objectives sought
4. Consider a range of alternative solutions
5. Evaluate each alternative to clarify their consequences
6. Choose the alternative with the greatest potential for solving the problem or producing the best result

Judgement

Tichy & Bennis, (2007)

- **Good judgement calls are a process, not an event**
 - It starts with the leader recognizing a need and framing the call
 - It continues through execution and adjustment
- **Leaders must make calls in three critical domains:**
 - **People:** the most difficult, and the most critical
 - **Strategy:** direction set for the organization to achieve a desired state in the future
 - **Crisis:** management of a disruptive or unexpected event that threatens to harm the organization or its stakeholders

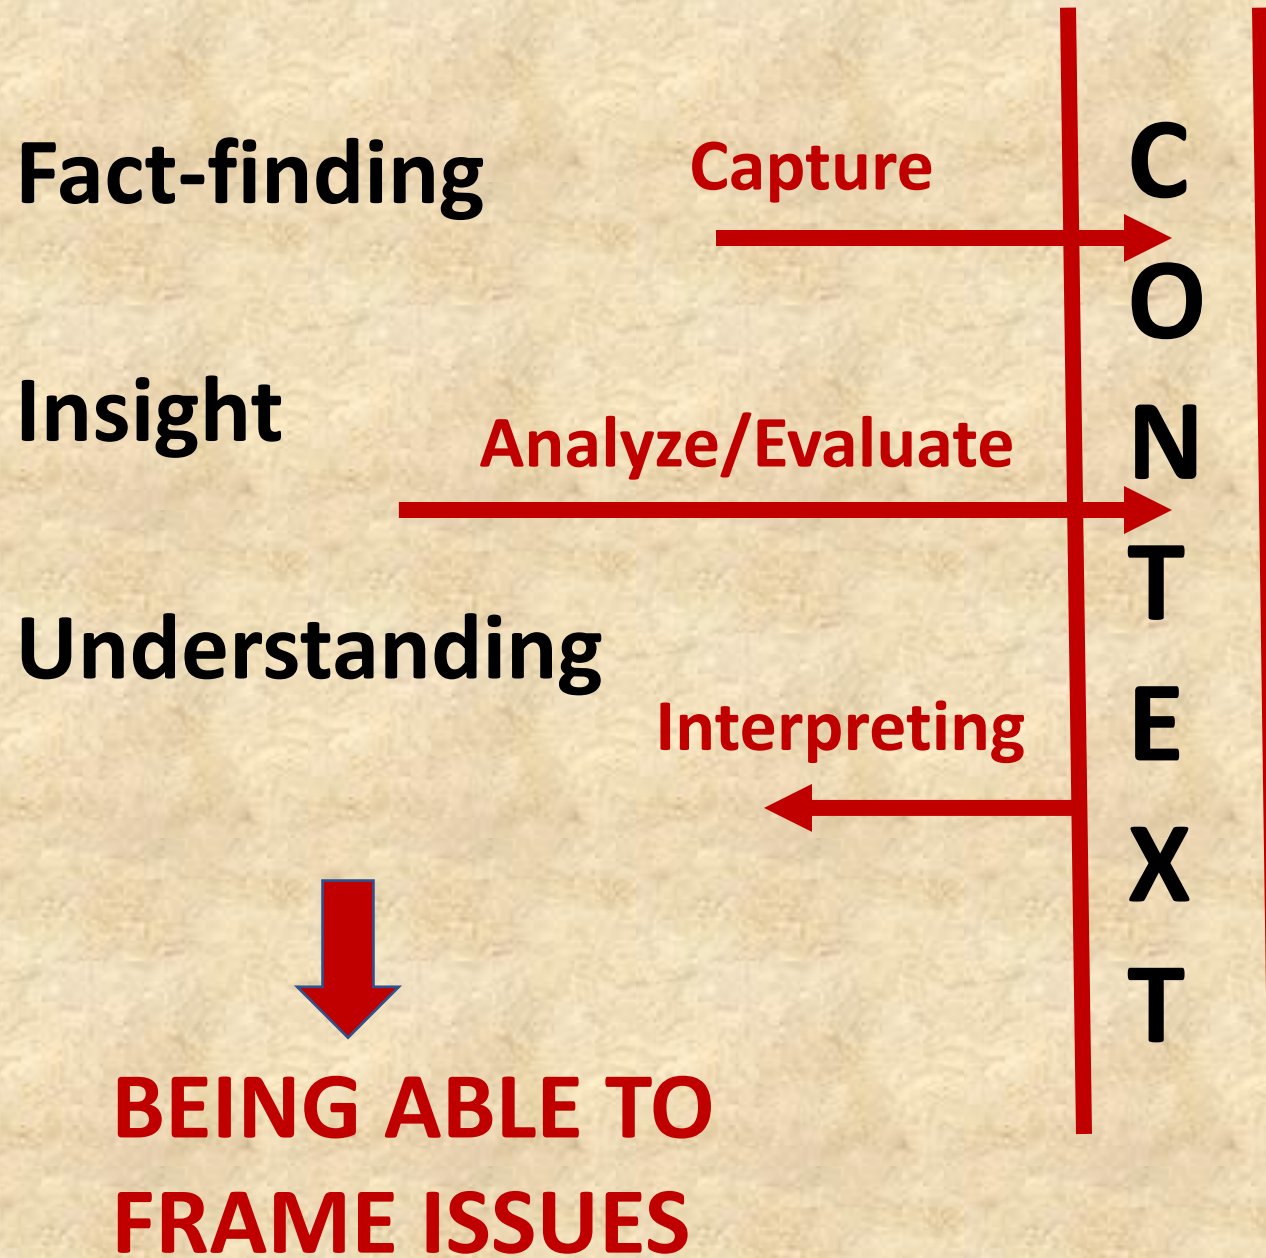

Four crucial factors in rational decision making

Thompson, (2002)

- Gathering Information
- Identifying the choices or options that are open to you
- Working out the implications or consequences of each of these options
- Making an evaluation

Evaluating Context

Framing and Re-framing

Bolman & Deal, (2017)

- **Mental models**= maps, mind-sets, schema, paradigms, cognitive lenses *are* **FRAMES**
- Often our preferences are *framed-bound* rather than *reality-bound*.
- **Frames act as a coherent set of ideas or beliefs that form a prism or lens that enable you to see what's going on in the world around you**
- Frames define the questions we ask and solutions we consider
- Leaders fail when they take too narrow of a view
- We must think flexibly and see organizations from multiple angles, to deal with the full range of issues we inevitably encounter.

The Four Frame Model : Each frame has its own image of reality.

You may be drawn to some and put off by others.

Applying all 4 deepens your appreciation and understanding of organizations.

Bolman & Deal, (2017)

- **Structural: The rational side**, perspective of an analyst, architect and designer that bends toward excellence
- **Human resource: The people side**, perspective of a servant, supporter, who is empowering that bends toward caring
- **Political: The conflict side**, perspective of an advocate, negotiator and coalition builder that bends toward justice
- **Symbolic: The cultural side**, perspective of a prophet and visionary that bends toward meaning and faith

Bolman and Deal, (2017)

- **How you think determines what you see and how you respond to situations**
- A frame is an amalgam of beliefs and assumptions that you carry in your head to help you understand and negotiate some part of your world
- **An accurate frame makes it easier to:** (a) know what's going on, (b) see more options, and (c) make better choices
- Frames are vital because muddled human affairs don't come with computerized navigation systems to guide you turn by turn to your destination
- Instead, you need to develop and carry accurate cognitive maps in your head

“Five Distinct Truths Governing Decisions” Sir Winston Churchill

- 1) That there is a full authority.
- 2) That there is a reasonable prospect of success.
- 3) That greater interest are not compromised.
- 4) That all possible care and forethought are exercised in the preparation.
- 5) That all vigor and determination are shown in the execution.

DO NOT FALL VICTIM TO THE OUTCOME BIAS

- Outcome bias focuses exclusively on judging the past decision by its outcome or result
- Rather than the known information, intentions and processes in deciding if the decision was correct. (or reasonable)

Those presented with bad outcomes rated the decision worse than those who had good outcomes.

- You should evaluate a decision by ignoring information collected after the fact
- And focusing on what the right answer is or was at the time the decision was made.
- Analyze intentions, knowledge, context, and process .

BE RESPONSIVE AND RESPONSIBLE

“Support your people”

Never look for Scapegoats

***FOCUS ON ACCOUNTABILITY NOT
BLAME***

Five main principles of Reflective Practices

- Considering what we did
- Considering why we did it like that
- Considering whether it was successful or not
- Considering whether it could have been done better
- Planning for any changes to our future practice

“We determine what is reasonable by examining what the officer knew at the time.”

Key Interpersonal Elements in the Leaders Soft Skill Repertoire in Judgements

- **Engage and treat people with dignity and respect**
(Candor with Kindness)
- Aggressive listening with timely responses
- Give people voice (Psychological Safety)
- **Explain things (B.F.U.) provide a Basis for Understanding)**
- Demonstrate neutrality, open-mindedness, humility, interest, and care
- Practice proactive transparency in acts and words

Don't talk behind peoples back, participate in rumors, or keep secrets

B.F.U.

Provide time and space to develop a Basis for Understanding

- Sustain of “qualified patience” (*The skill to manage impulses and temper passions in a measured space of time*)
- Totality of all the facts and circumstances
- Comprehension of the contextual features
- Explaining the nuances
- Balancing multiple angles of perspectives (beliefs)
- Credibility and reliability of observations and informational streams (*Establishing basis of knowledge*)
- Underlying history, patterns, and motives nexus to the facts and circumstances
- Objective evaluation of specific evidence

Having a storyline

Leaders must use mental frameworks to guide good judgement

Tichy & Bennis, (2007)

Teachable points of view that set direction and behavioral value

- It interprets the presence and shapes the future
- Creates a sense of purpose
- Is both rational and emotional
- Is an organic and ongoing process (updated as situations change)
- Creates a sense that the organization is embarked on an ongoing journey

The Architecture

- The way we do things have evolved overtime as a result of lessons learned
- When we deviate from core policy, we assume risk
- **Risk in unavoidable, but often manageable**
- We must have the ability to adapt and change to the complexity we encounter to maintain an advantage
- Exploration and different choices provide the landscape for innovation

A balance is achieved, through the analysis of the specific contextual features

Dr. Stein Cass on Risk

- ❖ **Risk** is defined as “the likelihood and impact of potential problems or undesirable events which might occur and prevent meeting an objective.”
- ❖ **Risk analysis** is defined as “attempts to define what could go wrong and what to do about it.”
- ❖ **Risk management** is defined as the program framework for risk analysis and uses the results to make decisions and take actions.

Feedback Loops are Critical to Insulate Agencies from Risk

Risk Swiss Cheese model latent condition pathways

Reason, J. (1990)

Any risk related decision is likely to be acceptable if:

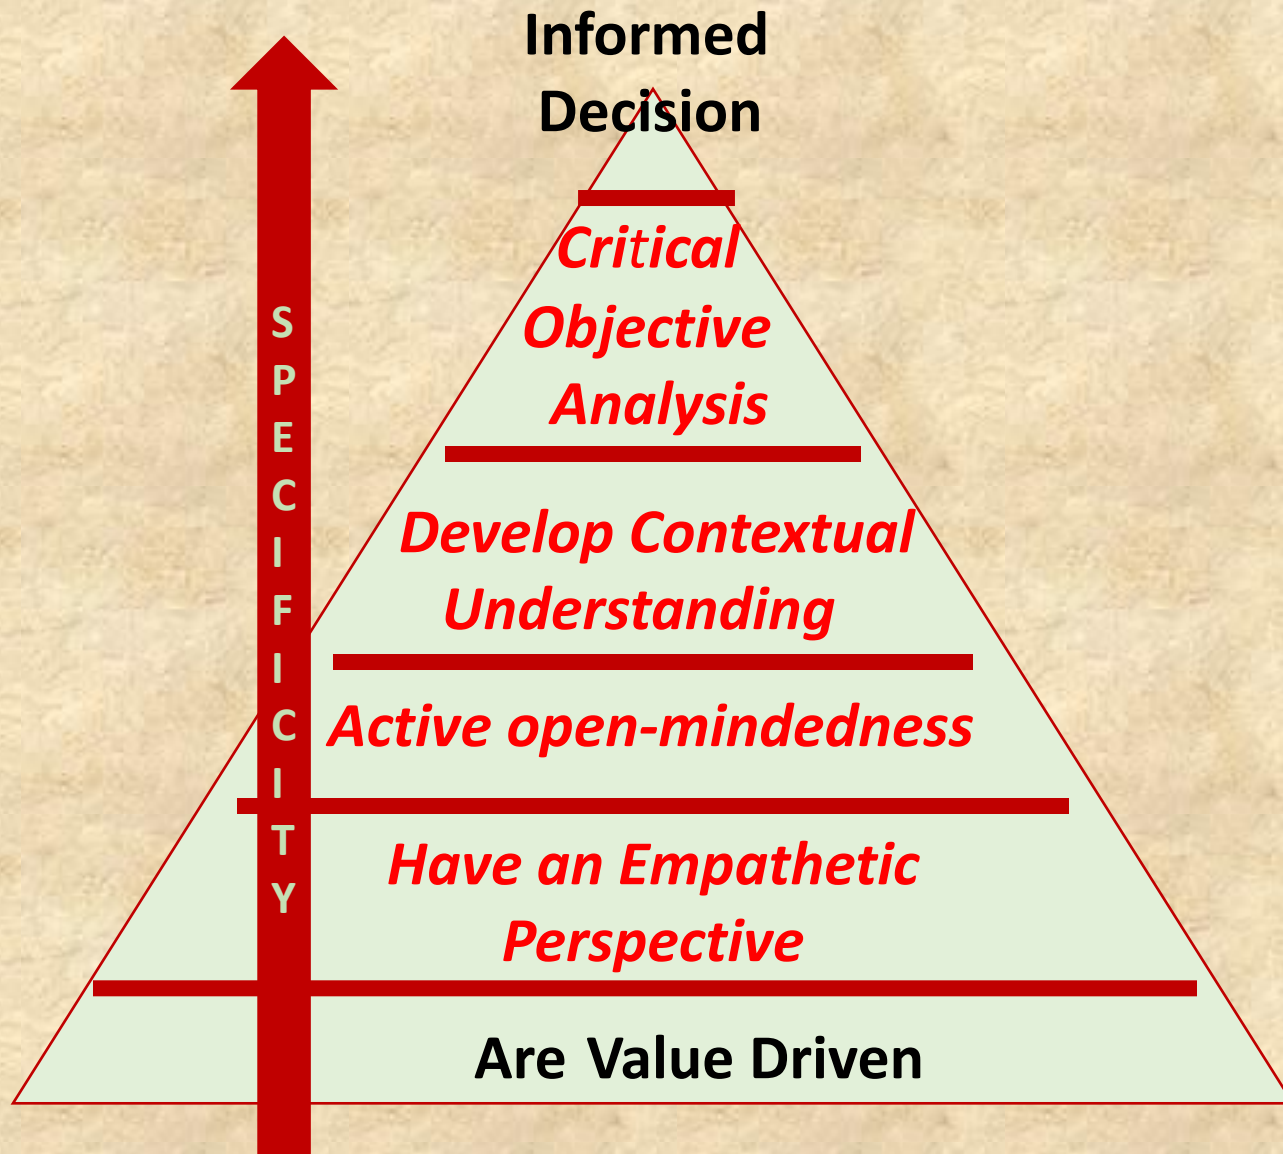

- It conforms with relevant guidelines
- It is based on the best information available
- It is documented
- The relevant people are informed

London Department of Health 2007

Judgement

- **An open mind should close to make a judgment when there is sufficient evidence or information to form a conclusion**
- This often occurs after considering various perspectives, weighing the pros and cons, and reflecting on the implications of a decision
- It's important to strike a balance between being open to new ideas and being decisive when necessary
- Decisions must be informed by objective and thoughtful analysis through the critical thinking process
- **Critical thinking provides the tools to make such judgements and draw objective conclusions based on evidence**

Specificity in content, for credibility in the context

Causes of Unintended Consequences

- 1) The world's inherent complexity (parts of a system responding to changes in the environment)
- 2) Perverse incentives
- 3) Human stupidity
- 4) Ignorance
- 5) Self-deception or other cognitive or emotional biases.
- 6) Rushing to judgment without the facts

- 7) Lack of objectivity and foresight
- 8) Poor or lack of communication with right people
- 9) Incorrect analysis
- 10) Errors in thinking
- 11) immediate interest, outweighs long term interest
- 12) culture, beliefs, and values
- 13) Not taking other people's perspective into consideration (Oblivious to feedback)
- 14) Poor interpretation, analysis and evaluation
- 15) Not woven into the ground level operational realities and core mission

Studies estimated that approximately 91% of workplace learning is informal

Chatzipanagiotou, N., Mirijamdotter, A., & Mörtberg, C. (2025)

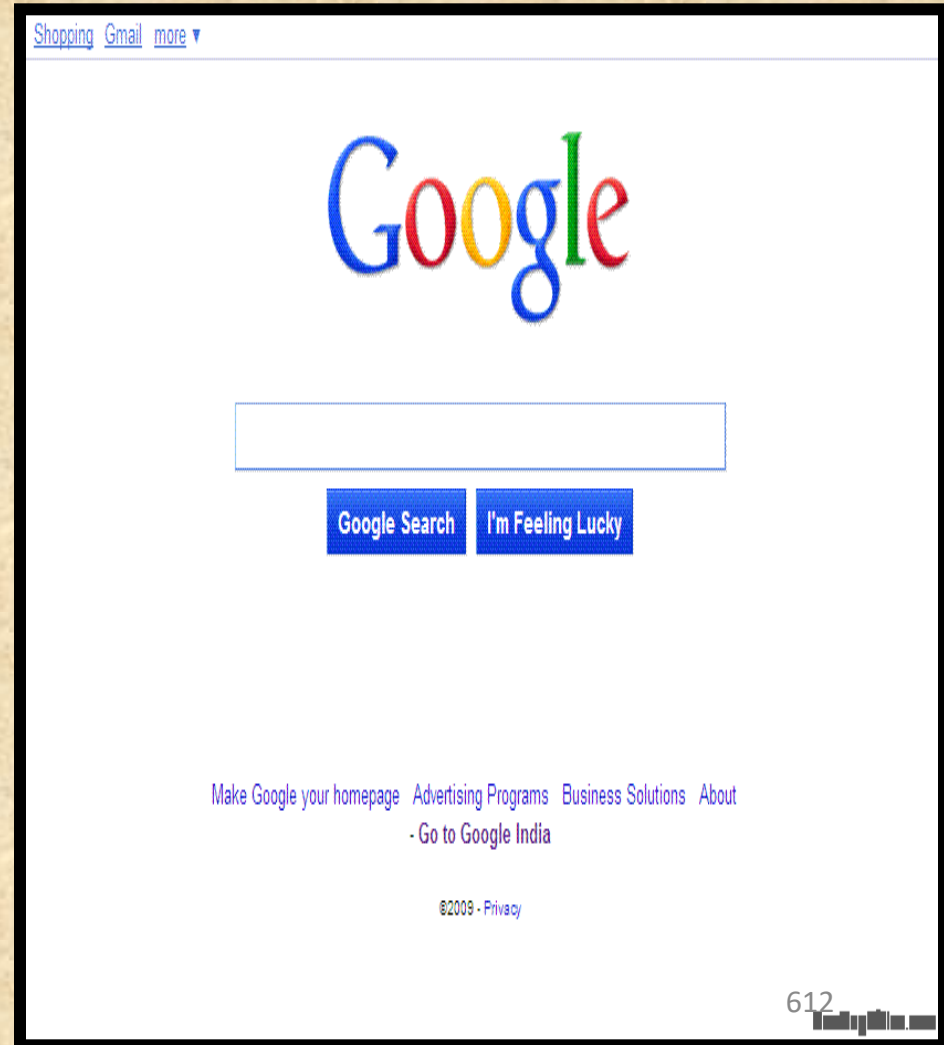

Learning mainly occurs naturally through daily work, rather than formal training.

Five core practices drive workplace learning:

- Collaboration
- Communication
- Coordination
- Joint decision-making
- Technology adaptation

Professional Growth and Development

Research is in a different environment

Expert officer perceptions of de-escalation in policing.

Natalie Todak & Michael White (2019)

Officers defined tactics that were effective at de-escalating:

- Having the time
- Showing humanity
- Listening
- Empowering
- Being honest
- Making compromises
- Being empathetic
- Having communication skills
- The ability to stay calm in a crisis
- Avoid making “mountains out of molehills,” recognizing a low-level offense can be handled with discretion

Officers described four situations in which de-escalation is more challenging:

- Officers cannot always use de-escalation because the first goal of police work is to protect life, de-escalation becomes secondary in violent encounters
- The amount of time officers have to deal with a situation dictates how long they try to de-escalate
- Dealing with a person who is under the influence of drugs or alcohol or suffering from a mental illness
- The difficulty of de-escalating the “committed” person. Officers told stories about people who, despite efforts to de-escalate, still failed to comply because they were committed to their decision. The most common example was the suicidal person

Artificial Intelligence *isn't intelligence* - Its a *model* of intelligence

Humans

- Knowledge
- Understanding
- Wisdom
- Contextual awareness

Artificial Intelligence

- Information
- Processing
- Generated algorithmic output
- Using algorithms, machine learning models, and data analytics to infer context from available information

- AI is a tool used to assist humans in performing tasks, automating processes, and analyzing data
- It enhances productivity and effectiveness in various applications, such as image recognition, language translation, and data analysis
- As the old saying goes “rubbish in rubbish out” the key to high quality outputs from AI is based on the quality and size of data the model has been exposed to

The process involves feeding these models with diverse and extensive amounts of text, so that they can learn patterns, language structures and semantic relationships (the connections and associations between words, phrases or concepts based on their meanings, or semantics)

**3 things
Important for
Human AI Collaboration**

Metacognition & Wisdom

Tools and Techniques to enhance your professional Growth and development

- **Conventional sources:** Academic journals, trade journals and [police] periodicals. Much can be learned from professional journals, [domain specific] books
 - University or college
 - Training sessions
 - When gathering external information, a broader range of sources can be covered
- **Using the Internet.** Use important and credible police sites (Research, read, evaluate, study and stay current)
 - Google alerts to your interest
 - Organizational Twitter SME followings

- Academic journals online
- IADLEST and the International Law Enforcement Educators and Trainers Association (ILEETA)
- IACP, BJA, COPS, Daigle law group, Public Agency Training Council, www.oyez.org , AELE Law Enforcement Legal Center (www.aele.org), police foundation, FBI LE Bulletin, etc.
- www.crimesolutions.gov
- www.strategiesforpolicinginnovation.com
- www.americansebp.org
- Police one, Law Enforcement.com [be careful on politics]
- SME designated U-tube

- **Data analytics:** finding strategies and tools for managing large volumes of both structured and unstructured data that are used to identify trends, detect patterns and glean valuable findings from the sea of information available to agencies
- **Networking.** Networking among colleagues inside and outside of law enforcement— at lunches, coffee breaks, training classes, Intelligence meetings, court, conferences, conventions and professional associations
 - Useful for gathering external information
 - Adopting strategy and tactics
 - Adopting ideas for building and refining your practice

- **Partnerships:** with those from other disciplines related to yours
 - Other criminal justice agencies
 - Professors at research universities in need of public service time
 - State and federal partners
 - Community partners (Faith based and other credible non-profits etc.)
- **Self-auditing.** finds ways to improve by identifying and adopting best practices from others
 - Enhance your performance by adopting others ideas
 - Analyzing and evaluating lessons learned
 - Insulate you and your agency from problems and liability

- The early identification of shortcomings and how those issues are waiting to surface
- **To expose those issues and resolve them under manageable circumstances before they can result in bad outcomes**
- **Sharing information:** with stakeholders
 - Other disciplines in criminal justice/public safety
 - You learn a great deal by regularly sharing information with stakeholders, clients and the public
 - Social media strategy (monitoring)
- **Craft specific research and development:**
 - **Take the time and efforts to probe and learn the M.O. and expertise of the offenders to learn the practice, patterns and perspectives**
 - Ongoing Action Research by Practitioners

Examples of required competencies in managing and supervising officers' operations specific to Patrol, Investigations and Narcotics

- *Three Tiers of Police and Citizen Encounters*
- *Use of force*
- Search and Seizure
- Brady material

Giglio issues

- Fact-finding and report documentation
- Informants and Evidence management

Factor Murphy's Law, Complexity and Change into every Equation

- We never can prevent mistakes and problems because we are humans (we can control how we handle them)
- Remember when advocates can't defeat your facts or find technical problems in the law or process, then they attack the way you managed the case, incident or event **(or you)**
- We can make every attempt to prevent mistakes and mitigate risk by watching what happens in other agencies nationwide **(proactive awareness)**
- **Study other agencies mistakes then look at your processes to see if it could happen to you (study and learn)**

Ten Deadly Errors

Pearce Brooks (1975)

- Failure to maintain proficiency and care of equipment
- Improper searching and handcuffing of a suspect
- Tired, not enough rest, or asleep on duty
- Relaxing too soon
- Missing danger signs
- Taking a bad position
- Failure to watch a suspect's hands
- Tombstone courage
- Preoccupation or not paying attention
- Apathy, an erosion of disciplined behavior and quality of performance

The Most Common Type of Incompetent Leader

Harvard Business Review

By: Scott Gregory
March 30th, 2018

Absentee leaders

- People in leadership roles in name only.
- They were promoted into management and enjoy the privileges and rewards of a leadership title but avoid partaking in any meaningful leadership opportunities.

The key derailment characteristics of bad managers are well documented and fall into three broad behavioral categories:

- **Moving away behaviors:** which create distance from others through failure to connect beyond what's absolutely necessary (**physically absent**)
- **Moving against behaviors:** which overpower and manipulate people while enhancing their position. (**emotionally absent**)
- **Moving toward behaviors:** which include using flattery, overly conforming, and being reluctant to take chances or stand up for subordinates. (**responsibility absent**)

Not many of you should become teachers, my brothers and sisters, for you know that we who teach will be judged with greater strictness.

James 3:1

The Burden of Servant-hood

Key Perspective

All leaders have an answer to the question:

"What do I want from my employee?"

But can the leader answer this question:

"What do I want for my employee?"

You have to get over yourself

Dr. John Maxwell

- I have to find myself to know myself...
- I have to know myself to be myself...
- I have to be myself to improve myself...
- I have to prove myself to get over myself...
- I have to get over myself to give myself to others.

***When you get over yourself you can relate
and connect with others***

Are you a Servant Leader?

Greenleaf, (1977)

- Do people believe that you are willing to sacrifice your own self-interest for the good of the group?
- Do people believe that you want to hear their ideas and will value them?
- Do people believe that you will understand what is happening in their lives and how it affects them?
- Do people come to you when the chips are down or when something traumatic has happened in their lives?
- Do others believe that you have a strong awareness for what is going on?

- Do others follow your requests because they want to as opposed to because they “have to?”
- Do others communicate their ideas and vision for the organization when you are around?
- Do others have the confidence in your ability to anticipate the future and its consequences?
- Do others believe you are preparing the organization to make a positive difference in the world?
- Do people believe that you are committed to helping them develop and grow?
- Do people feel a strong sense of community in the organization that you lead?

7 Dimensions of Servant Leadership

Liden, (2008) and Liden et al. (2015)

- Emotional healing or being sensitive to the personal concerns of followers
- Demonstrating a conscious, genuine concern for helping the community
- Conceptual skills or showing knowledge about the organization and the tasks that are prerequisites for providing help to followers
- Empowering followers or encouraging and helping followers to identify and solve problems, as well as to determine when and how to complete work tasks

- Helping followers grow and succeed or demonstrating a genuine concern for followers' career growth and development
- Putting subordinates first or using actions and words to make it clear to followers that satisfying their work needs is a priority
- Behaving ethically or interacting openly, fairly, and honestly with others

Servant leadership is about treating stakeholders as valued individuals to whom the organization owes a multi-faceted set of moral duties to pursue their welfare, growth, and wholeness Greenleaf, (1977)

Characteristics of Servant Leadership

- Calling
- Listening
- Empathy
- Healing
- Awareness
- Persuasion
- Conceptualization
- Foresight
- Stewardship
- Growth
- Building Community

***“A society grows great
when old people plant
trees whose shade they
will never sit under”***

Greek Proverb

“So, if I, Your Lord and Teacher, Have washed your feet, you also ought to wash one Another’s Feet. For I have set you an Example, that you also should do as I have done to you.”

- Jesus Christ
John 13:14-15

Servant Leadership: A systematic review and call for future research

The Leadership Quarterly

30, (1), February 2019, Pages 111-132

Eva, Robin, Sendjayac, Dierendonck & Liden

- With over 200 studies having been published on servant leadership, we now are able to provide substantial advice for practitioners.
- **The consistent positive relationships found between servant leadership and valued outcomes** (even when controlling dominant forms of leaderships, such as transformational and LMX) at the individual level (e.g., individual citizenship behaviors, task performance, creativity), team level (e.g., team potency, team performance), and organizational level (e.g., customer satisfaction, return on investment)

- Servant leaders focus on providing for followers so that they reach their full potential, become empowered to handle tasks and decisions on their own, and who adapt to communal sharing and a culture of serving others

[Paramount is the focus and work toward the subordinates' professional growth and development]

- Along with the many benefits of servant leadership, practitioners must be prepared to exert tremendous effort in developing a servant leadership culture, starting with themselves as role-models
- ***However, studies find that it is unlikely that self-centered, dogmatic, narcissistic people can be trained to be other-centered, sensitive, empathetic, socially sensitive servant leaders***

Because servant leaders focus on employee well-being they tend to foster significantly:

Kaltiainen & Hakanen, (2022)

- Higher levels of work engagement
- Higher levels of task and adaptive performance
- Lower levels and incidents of burnout

Three styles of compassionate leadership:

Hougaard & Lama, (2019)

[Action and Efficacy Examples]

- **The trailblazer:** who leads from the front, takes risks, and sets an example
- **The ferryperson:** who accompanies those in his/her care and shapes the ups and downs of the crossing
- **The shepherd:** who sees every one of her/his flock into safety before themselves

Three styles, three approaches, but what they have in common is an all-encompassing concern for the welfare of those they lead.

Servant Leader Relationships

- Must be based on a reputation of credibility and trust
- Must be navigated and negotiated in caring ways
- Must be proactive attention and concern for both parties' perspectives
- Must be sensitivity and priority in response to what others want and need
- Must identify purpose and meaning as it relates to others (Benefits)
- **Must be as much concern about someone else's situation as you are about your own situation**

Servant Leaders Remember the 3 Task of Management in Context

By Dr. Peter Drucker

- Focus upon the organization and its specific purpose and mission
- Make work both suitable and productive for human beings
- Taking responsibility for the organization's social impacts

And in addition:

✓ *Loyalty to the higher duty and the truth*

✓ Loyalty to management

✓ Loyalty to your mission

✓ Loyalty to your people

When your people bring you an issue or problem that is very serious to them but not to you or the agency you must show them that their concerns are important.

“Put them before you.”

Your actions and timeliness of the actions will tell the story.

Make your people a priority then they know their value and will work to keep it.

Leaders who serve remain aware regarding *their people's situation and feelings*

- ✓ Work-place/shift/call issues
- ✓ Emotional issues afoot
- ✓ Family issues
- ✓ Financial issues
- ✓ Self esteem issues
- ✓ Performance issues
- ✓ Important issues to their people

Watch and Listen

***More engaged and proactive opportunities for
employees to take charge and contribute (thrive)***

Servant Leaders create a humanizing work environment that values employees as individuals and supports their personal growth

Foster a culture that encourages proactive behavior and employee thriving

- Encouraging and supporting employee thriving can lead to a more engaged and proactive workforce, benefiting both individuals and the organization as a whole
- Leaders should priorities creating a positive work environment that promotes employee well-being and proactivity to break the negative cycle of dehumanization and reduced taking charge behavior.

OFFICER CARETAKING RESPONSIBILITY

- Be sensitive and alert to **officer fatigue** and its nexus to work hours and work times between shifts in conjunction with court, training and other job responsibilities
- Consider safety issues (**driving**), decision making, health, family, job performance, risk and increasing exposure to liability
- Monitor (within policy) secondary employment, from hours and times worked to proactive guidance regarding officer's decisions and actions that may be affected by some conflict between the police agency's interests, a private employer's interests, and the officer's own personal interests. **(STAY AHEAD OF PROBLEMS)**

Remember, at times you are protecting the officer from him or herself

Officer Safety and wellbeing are huge issues in leadership and can broadly be defined under five categories

- Stress and Fatigue
- Vehicle Operation
- Operational and Emergency Responses
- Training
- Mental and Physical Health Wellness

LEADER MATERIAL SACRIFICE

(What I have and what I give)

Talking the talk and walking the walk

Example:

If 8 new computers arrive and you have 8 subordinates, they get the computers, not you!

YOUR PEOPLE RANKED FIRST!

LEADER ATTENTION SACRIFICE

(What I do and how I do it)

You demonstrate your subordinate's importance by your attention toward him or her

how you see them, determines how you treat them

When they feel valuable then they act valuable

Servant leadership opportunities

- Promote work life balance (family & significant others)
- Look for or demonstrate opportunities to lighten your people's loads (take out rocks)
- Reduce uncertainty by outreach to officers to gather feedback for projections on their call status or special assignment details by a proactive quest and forecast of routine availability to assist the officers manage their future and reduce stress

Time is one of the greatest gifts God bestows upon us.

Time is our most valuable resource, asset and investment

- **A leader's time and energy is a beneficial sacrifice up front**
- The time and energy are redeemable when the investment is in the development of your people
- The leaders time builds relationship and promotes like minded thinking regarding goals and objectives
- It is an investment that pays huge dividends

A Servant Leader makes every effort to support and be there (when possible) for their people

Personal Issues

- Important life events (the good and bad)
- Special occasions
- Weddings
- Sickness
- Funerals

Work Issues

“I will never ask you to do, what I wouldn't do myself”

Man Enough for the Job

Retold by Ella Lyman Cabot

Great men do not disdain small duties.

An incident is told of the first American war, about an officer who set his men to fell some trees which were needed to make a bridge. There were not nearly enough men, and work was getting on very slowly. Up rode a commanding-looking man and spoke to the officer in charge, who was urging on his men but doing nothing himself. “You haven’t enough men for the job, have you?”

“No, sir. We need help.”

“Why don’t you lend a hand yourself?” asked the man on horseback.

“Me, sir? Why, I am a corporal,” replied the officer, looking rather affronted at the suggestion.

“Ah, true,” quietly replied the officer, and getting off his horse he labored with the men until the job was done. Then he mounted again, and as he rode off he said to the officer, “Corporal, the next time you have a job to put through and too few men to do it you had better send for the Commander-in-Chief, and I will come again.”

It was General Washington.

Field Engagement and Involvement:

A Balanced Perspective

- Assistance with the labor when needed, provide a break or close the gap to get home
- Take care of, and eliminate the mundane things **(contextual selection of responsibilities to help)**
- Leave the important things to your folks. **(DO NOT MICROMANAGE)**
- Seek, inquire and listen. The additional time and energy you provide is appreciated
- Insulate with degrees of separation, to remain in a leadership capacity in case of problems **(Stay Within the Management Role and Responsibilities)**

Individual Professional Growth and Development of you and your staff through training is Paramount

- Provide training opportunities
- Ensure training is “Fresh” with current issues
- Ensure continuity of information and practice in work unit
- Ensure you, their peers and supervisors are “up to speed”
- **Ensure work unit supervision supports training effort and CULTURALIZES IT**
- Ensure custom and culture match training

Many organizational failures are a direct result of the lack of competency regarding subject matter by senior management.

Cause: **Lack of training/education**

- Reasons:**
- 1) Senior Managers refuse to seek training
 - 2) Senior Managers feel they don't need it.
 - 3) Senior Managers feel they can't be gone.
 - 4) Senior Management's boss wouldn't let them go

Training hurts today

To take people from their duties...“But, the investment you make today, pays tremendous dividends tomorrow.”

“It motivates and prepares your people for the future.”

Training is critical ingredient to the formula to promote the professional growth and development of your people and enhance your agency

Making Yourself Redundant

Louis Efron

Forbes Magazine, August 29th, 2013

- **A leader is not doing their followers, boss, or organization any favors by building a team that can't function without them.**
- They have a duty of care to teach their followers to fish instead of fishing for them.
- At day's end, the true test of effective leadership manifests itself when a leader is absent.
- Start trusting your people to work on their own making it okay to fail and learn from mistakes

Succession Responsibility

- ❑ The Commander has a tremendous responsibility to ensure that his or her second in charge is ready, willing and able to take over **COMPLETELY** and **SEEMLESSLY** in their absence.
- ❑ Such requires a commander to grow and develop their supervisors to **KNOW AND DO THE COMMANDERS JOB WELL...**

Commanders must provide:

- Information and Resources
- Mentorship and Oversight
- Opportunity and Meaning
- Support and Praise

The 70:20:10 approach in training

Kajewski & Madsen, (2012); Jennings, (2013)

- Posits that 70 percent of the learning an individual does **occurs at work, through projects and day-to-day experiences**
- 20 percent occurs through networks and, in particular, through being coached and **mentored by peers and more senior staff**
- 10 percent occurs through **formal schooling opportunities outside the office**

The servant leader understands the tremendous need and awesome responsibility to provide a meaningful and ongoing culture of **PROACTIVE MENTORSHIP** to their **managers, supervisors, and subordinates** in their **work units**

Mentorship is critically important to start at the front end

Not just when problems occur!

YOU CANNOT WAIT

Remember: Everyone is different and has different ways

Time and how it becomes a utility is important

We must devote time to those under our charge

How People Approach Time and Work

- **Monochronic** people prefer to do things more sequentially (or one at a time)

This is typified in the example of a: do one task, complete it, and then move onto another task type of work style (a serial processing of one's work)

- **Polychronic** orientation prefers to be working on multiple tasks during the same time period (or more of a parallel processing of their work).

Characteristic of this type of work style is the employee who is constantly switching between tasks during a given work period.

- Since organizational leadership naturally occurs within the context of time (e.g., schedules, deadlines, project cycles), it is important to consider the role of time when examining leader-member relationships
- A person's preference for how they like to do work impacts the employee and ultimately the organization

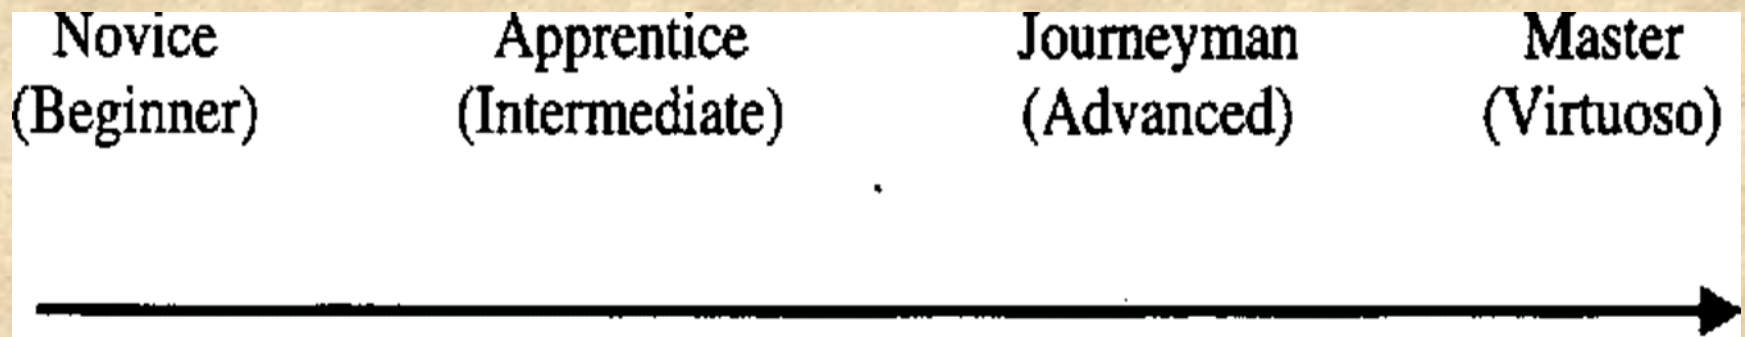

Leaders must mentor the practical practices and require focus and scope, when necessary, while also providing individual freedom and autonomy when possible

A servant commander is a constant and ongoing mentor to their people.

The mentor relationship is based in five components:

1. Belief in mission and purpose
2. Competence in the job
3. Genuine care and commitment to your apprentice
4. Encouragement and pride in your apprentice's work
5. Absolute dedication to professional conduct and behavior

“You want them to be successful.”

Seven progressive and continuous efforts

- **Engage:** Vision, purpose and meaning
- **Establish Expectations:** Roles and relationships
- **Enlighten:** Insight and education
- **Encourage:** Motivate and support
- **Enable:** Provide autonomy, opportunity, and practice
- **Develop:** Accountability through evaluations and feedback
- **Model:** Continuous demonstration and ideological conversation of proper work contexts

- Mentoring across social and demographic lines is good for the mentor
- It can make you a more empathic and emotionally intelligent leader
- Better at spotting potential outside the usual mold
- Better at understanding the obstacles people face when they aren't part of the dominant group
- Makes it a little easier for the next person to get leaders' attention and support.

Farnell, R. (2017)

- Scrutiny from supervisors and, especially, from top managers reduce officers' job satisfaction, but that mentorship increases satisfaction and slightly mediates the effects of scrutiny.
- The findings suggest police executives seeking to improve officers' job satisfaction can do so by fostering mentoring, both formal and informal, within the organization and by ensuring officers feel supported by top management.

Gau, J. M., & Paoline III, E. A. (2025).

Mentors are Pathfinders and Navigators Through Agency Policy and Procedure's Interface with Operational Realities

- Through complex systems of bureaucratic requirements
- Translate and interpret “intent of and rational behind procedures and policies” to ensure best practice
- Outline methods and manners to ensure compliance without impeding performance and achievements
- Provide a dual framework, encompassing the subordinate being required to **“think through”** and the supervisors responsibility to **“help them through”** the series of actions or complicated tasks that seem unnecessary but are required by the agency

TIME IS OUR MOST VALUABLE ASSET

Four essential elements of persuasion

Harvard Business Review

Jay A. Conger

- **Establish credibility:** Grows from expertise and relationship
- **Framing to find common ground:** Illuminate the impact and benefits to everyone
- **Provide vivid evidence:** Stories, illustrations, metaphors, and examples
- **Connect emotionally:** Accurately sense and respond to your audience's emotional state

Personal scenarios, anecdotes, and case examples offer valuable, often unforgettable insight.

Mentors who can talk about themselves and their experiences establish a rapport that makes them “learning leaders.”

Proactive prophylactic explanations and advice:

- **Showing them things to expect**
- **Sharing past mistakes (lessons learned)**
- **Not just knowing policy, but providing real examples where the policy meets operations (articulating policy rationale and illustrating consequence thinking)**
- **Showing examples of job issues (telling war stories)**
- **Capacity building (modeling, casting vision, and teaching)**

Using Mentoring and Storytelling to Transfer Knowledge in the Workplace

Swap, Leonard, Shields & Abrams (2001)

- Skills, managerial systems, and norms and values, woven into interdependent systems of knowledge termed core capabilities, are critical to any organization
- These types of knowledge, and especially their tacit dimensions, are conveyed through processes of socialization and internalization
- Two mechanisms key to those processes are mentoring and storytelling

O'Leary, Orr & Mike Bennett,(2017). Relational Leadership, Storytelling, and Narratives: Practices of Local Government Chief Executives. Public Administration Review, 77 (4), 515–527

- Stories have a capacity to cut across professional or departmental boundaries and engage people with a shared sense of context and purpose
- Stories can generate an emotional connection helpful to motivating and influencing staff
- Stories can help challenge and reframe the assumptions that underlie particular ways of practicing
- Stories lend themselves to talking about the public mission of organizations
- Attention to stories and narratives helps us understand leadership influence as collective and collaborative

Mentorship to supervisors and officers for individual and collective safety

- Driving
- Working traffic accidents and incidents
- Pursuits (Vehicle and foot)
- Tactics on calls (Encounters, arrest, searches and transports)

Reminding them that the best tool they have is their brain

- **Mindset**
 - Paying attention
 - No short cutting
 - Risk versus Reward consequence forecasting

Cognitive Apprenticeship Model to Teach Critical Thinking

www.Oxford-Review.com

- **Modeling:** Expert performs task while verbalizing their thinking to make processes visible
- **Coaching:** Learner attempts task with expert support, feedback, and guidance
- **Scaffolding:** Temporary support structures provided, then gradually removed as competence grows
- **Articulation:** Learner explains reasoning and decision making to build metacognitive awareness
- *Modeling aloud:* Explicitly name and define the skills during the mentoring process

- **Reflection:** Learner compares their approach with that of experts or peers to self-assess
- **Exploration:** Learner independently applies knowledge in new, often open-ended situations

LEARNING PRINCIPLES

- ✓ ***Situated Learning:*** Skills learned in real-world or meaningful domains or contexts
- ✓ ***Social Interaction:*** Collaborative learning through dialogue and peer support
- ✓ ***Metacognition:*** Ongoing self-monitoring and strategy adjustment

The Importance of the concept of social skills

Michelson, Sugai, Wood and Kazdin (1983)

- Are learned
- Are composed of specific verbal and non-verbal behaviors
- Entail appropriate initiations and responses
- Maximize available rewards from others
- Require appropriate timing and control of specific behaviors
- Are influenced by prevailing contextual factors

We must role model and mentor people skills

Often, In today's law enforcement profession some officers experience has not been:

- Grounded by working many diverse cases
- Complimented by a competent mentor
- Oversight from a competent supervisor
- Tested from the witness stand in court

*It is what officers have been able to get away with
over time.*

Examples of what we miss from the courtroom experiences

- **Brady vs. Maryland** (Discovery)
- **Motion to suppress** (Searches and Seizures)
- **Jackson-Denno** (Voluntariness of In custody Statements)
- **Bruton Rule** (Statement of a non-testifying co-defendant implicating the defendant)
- **Roviaro v. U.S.** (informer-tipster cannot be revealed under any circumstance. Informer-participants or informer-witnesses, generally have exceptions to the rule of privilege)

Mentorship with legal issues is critical.
The best education was often from the witness stand

- **Reasons for policy and procedures**
- **3 tiers of police citizen encounters**
- **Seizures, PC, consents, search warrants and force**
- **Constitutional insight and understanding**
- **Reasons behind law** (Examples: Brady material and Jackson-Denno hearings)
- **Courts reasons and intentions**
- **Consequences involved**

The Impact of Marginal Policing

Top 6 Issues officers get themselves in trouble:

- **Failure to know, understand, train, follow, and enforce policy** (Lack of supervision and oversight lead to poor work unit culture)
- **Making marginal cases:** (borderline or fringe cases that lack legitimacy or fairness, out running the prosecution)
- **Authoritative mindset:** “You disrespecting me”
- **Unlawful stops and detentions:** (fishing expeditions, lack of specificity, stereotyping or stopping on a hunch)
- **Unlawful arrest:** (lack of P.C. or P.O.P.)
- **Unreasonable force:** (from the domino effect)

The Domino Effect

Mentors Draw the Red Line

Model and set a Culture of Standards and Proper Conduct

Mentor's never ever “walk past poor performance.”

- Correct in private in a supportive manner.
- Attack conduct only, never the person.
- Described how behavior adversely effects mission.
- **Give examples of correct methods and explain consequences.**
- Solicits feedback.

**Change, whether good or bad, is
often equally resisted**

***Many leaders are more comfortable
with old problems than they are
with new solutions***

Mentoring through change

- An organization does Not Change until the Individuals involved with It change
- Interventions are the actions and events that are key to the success of the change process
- **Leadership is Essential to Adapting to the Change Process**
- Central is understanding, feelings and perceptions and realizations about the Change Process
- Mapping out the different groups that are involved in the change and how they are affected by the change
How their identities are affected

Key is understanding the cultural cycle

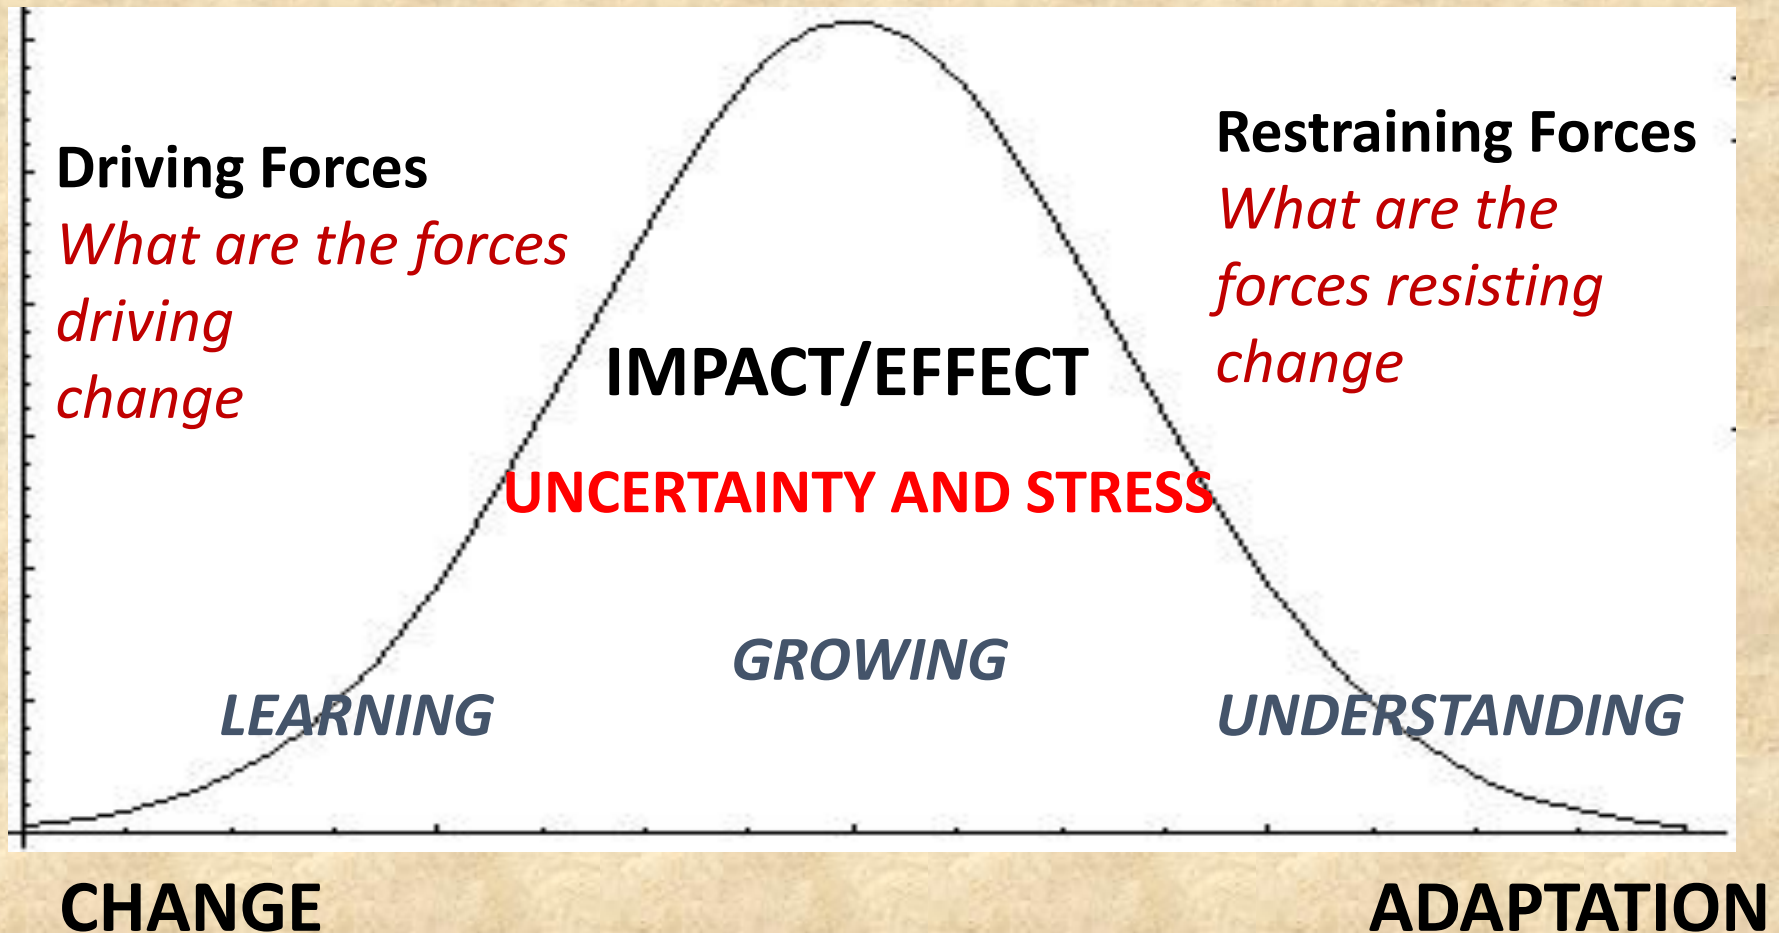

The Culture Cycle

Useful tool for understanding and facilitating intentional culture change

Often, Change, whether good or bad is equally resisted.

Change is not an event, it is a process

Some Do's and Don'ts for Mentors

Do's

- Set high standards, role model professional conduct and work ethic
- Be clear about your motives. Ensure there understood
 - “Clear vision, clear expectations”
 - No mixed messages chances
- Look after your protégé's needs but consider your own as well “remember mission and performance.”
- Be prepared to make objectives and evaluations driven by facts not relationship.

Don'ts

- Do not lose patience “sometimes the best require process.”
- Remember different people have different experiences that shape their perspectives and behavior, Often, we must recondition them
- Don't require your exact footsteps to be followed. Value the protégé's unique path if your vision and mission accomplished.
- Never let relationship defeat frank conversation and objective assessments.

Mentoring to “newly promoted or assigned supervisors

**From “Saving new supervisors from themselves”
Carol A. Walker HBR**

You must help them understand the why’s and how’s regarding:

- Their ability to listen and communicate
- Their ability to delegate
- Receiving help and support from above
- Projecting confidence
- Focusing on the big picture
- Providing constructive feedback

**“A Teacher affects Eternity; He or She
can never tell where their influence
stops...”**

~Henry B. Adams

Develop your officers by building their capacity to do the job, then when their ready... turn them loose and let them work!!!

- **Train them** (formal, informal, FTO, OJT and mentorship)
- **Provide specificity as to standards and give them clear unambiguous expectations**
- **Observe them** at work(Oversight)
- **Evaluate their readiness level** with the task or job required. (Their competence, confidence, and willingness)
- **Provide Feedback** (for their continued professional growth and development)

Never micro-manage!

- As a servant leader, you tell them and show them. Then let them swing on the trapeze while you act as the safety net.
- The manager can be more involved, but they must not do the employees job or hijack their role.

**You can pick the hymnal,
select the song and verse...
But let them do the singing
“Trust is about Risk”**

Root Causes of Micromanagement

(Chambers, 2004)

- Fear, confusion, and discomfort of the leader.
- A lack of confidence, the potential failure of others, being ignored, the threat of others competence, and loss of recognition.
- Lack of patience, emotionally insecurity and increased pressure.

The most common reasons for not delegating are:

Maynard (1996)

- Lack of patience
- Insecurity (*Risk adverse*)
- Inadequacy (*Can't do the job*)
- Occupational hobby (*doing things rather than ensuring things get done*)

Seven (7) deadly sins of delegation

Wilson, (2010)

- The “do it my way” syndrome
- Believing our people are not ready yet
- Abdicating, (*not giving up the throne*) not delegating
- Not providing clarity or specificity
- Lack of communication to others
- Taking it back
- Not establishing clear return and report processes

When managers violate certain aspects of the process the entire delegation of authority process will fail (Pollock, 1986; Maynard, 1996; & Wilson, 2010).

THE MICROMANAGER

- Self-centered and absorbed
- Manipulative/ controlling
- Excessive monitoring or reporting
- Excessive demands for approval
- Dysfunctional delegation/collaborations
- Withhold information (will not share)
- Paranoid and insecure

The most common meaning associated with “micromanagement” in the public safety culture is:

To provide supervisory oversight with excessive control and attention to details that are best left to the operational personnel.

Police Chief, IACP, (Gove, 2009)

The micromanager is typically one who is obsessed with control and is overly concerned with all aspects of employee work.

Micromanagers tend to dictate every detail of the work for which their subordinates are responsible, and they truly believe that their way is not only the best but also the only way.

Symptoms of the Micromanager

White, (2010)

- Often supervise a particular project telling people exactly what to do and how to do it
- Are control freaks; they are fundamentally insecure and afraid to trust the performance of those below them
- They often frustrated because they would have gone about the task differently than you
- They typically go alone to the boss's office, as they do not wish subordinates to gain credit
- They become irritated when others make decisions without consulting them
- They explode when their bosses by-pass them and go directly to one of their subordinates

- They keep track of the number of copies made on the Xerox machine, count paperclips, or scrutinize the number of long-distance phone calls
- They are obsessed with meaningless details; they spend an inordinate amount of time overseeing simple tasks.
- They frequently call the office while on vacation
- They dictate time, often creating deadlines for deadlines sake
- They demand overly frequent and unnecessary written status reports
- They are so busy that delays happen frequently, while people wait for their input or signoff

- Micromanagers stretch themselves too thin and take on too many projects
- Their in-box stays full because they move from one to job to another without completing any of them
- They are too busy to meet with subordinates and not available to provide guidance
- They constantly want to know where all their team members are and what they're working on
- Micromanagers abhor mistakes. Seldom praising, they consider their employees incompetent and soon lose the respect of coworkers and employees
- They are quick to blame, and they seldom admit their own mistakes and shortcomings.

Insecure leaders think everything is about them and as a result:

- Every action, every piece of information, every decision is put through their filter of self-centeredness.
- When someone under their charge performs well, they fear being outshone.
- When someone under their charge does poorly, they react in anger because it makes them look bad.
- Insecure leaders desire the “status quo” – for everyone but themselves.

- Anyone who questions the leaders' facts or ideas is seen as a troublemaker or disloyal
- They are inconsistent because they are incompetent and lack the confidence to make sound decisions or take risk
- **When leaders are insecure, they often project that insecurity down to the people below them**

Newly promoted supervisors might have problems adjusting to their new responsibilities and tend to micromanage

- The attention to detail, control, and autonomy that was important as an officer before promotion follows into the new position.
- The new supervisor fails to see the “big picture” of the responsibility's attendant with promotion.
- As such, there can be problems with delegation and teamwork.
- Many will return to what is comfortable and familiar, performing tasks themselves to ensure that the work is done properly
- **It may also stem from their own insecurity**

- Findings reveal critical insights derived from eight emergent themes, including declines in morale, erosion of trust, the role of effective leadership, and the limitations of certain incentives.
- Participants reported a loss of trust in their leadership, significant declines in morale, prompting them to prefer leaving their organizations—*even for lower compensation—rather than continue working under micromanagement.*

Mendoza, C. S. (2025)

Workplace Consequences from a Micromanager

- Subordinates appear frustrated, depressed, and/or unmotivated. Subordinates never take initiative, instead seeking permission from their supervisors before doing anything.
- The work unit has higher than normal employee absence, leave request, attrition and turnover
- Low work unit creativity, productivity and morale
- High work unit stress
- Subordinates go out of the way to avoid the manager
- Management attempts to control the flow of all information in and out of the work unit
- Management does not involve subordinates or solicit their opinions and advice about operations
- **Dysfunctional information flow, dysfunctional delegation, no individual growth or development**

- Employment professionals have found micromanagement to be one of the top three “misery” factors that lead to employee resignation.
- Micromanagement over time is extremely ineffective.
- Managers spending inordinate amounts of time on task that should have been delegated.
- It causes burnout and leaves little time for managers to build a vision and focus on the future.
- Micromanagers very rarely view themselves as such. They refute such claims by citing their management style as “structured or organizational.”

Micromanagers, like many addicts, are the last to recognize they have a problem

Holding people accountable is not micromanagement.

To make people take responsibility you must hold them accountable.

To **communicate** clear unambiguous standards and expectations, then ensure people **meet** those standards and expectations through **oversight** is NOT micromanagement

There are times when extraordinary circumstances require extraordinary management approaches in conjunction with honest and candid dialogue with the employee

Examples:

- High profile or Politically sensitive cases
- High risk and/or dangerous activities
- Dealing with inexperienced or new employees
- Dealing with marginal employees

**THE KEY IS UPFRONT COMMUNICATION
WITH EMPLOYEES REGARDING THE TASK
AT HAND**

Micromanagement is when you try to do their jobs.

Good management is when you ensure they do their jobs.

Exemplary management is when you create a culture where they “would die” before they didn’t do their job.

The Contemporary Environment' Nexus to Leadership and Management

McChrystal, S. (2015)

- Our environment erupts with too many possibilities to plan for effectively, we must become comfortable sharing power
- Increased complexity, disruption and unpredictability requires increased agility and adaptability
- Loosening control and empowerment are necessary to promote innovation, initiative, creative thinking, agility and adaptation
- “Eyes on, Hands off” leadership philosophy

“When leaders see what’s going on, they naturally want to control what's going on...We must become comfortable at sharing power”

McChrystal, (2015)

- Empowerment is unnatural and we want to command and control
- The velocity and volume of decisions needed exceed the capabilities of the best supervisors
- The speed required for initiative often exceeds bureaucratic means
- Empowerment provides “ownership” and autonomy that translates into “growth and development” to innovate and adapt to changing and dynamic circumstances

The first step away from micromanagement is for supervisors to admit being micromanagers

- Only then can a conscious effort be made to work toward a more inspired management style
- Awareness and commitment are crucial to successful change
- A rapid transformation is unlikely; committed supervisors are best served by focusing improvement efforts on one or two specific characteristics that are causing the micromanaging tendency and then building momentum from incremental successes.

Supervisors need to maintain an open mind, be flexible in thought, and engage in participative management

- Officers are allowed to provide input. In this manner employees are most likely to buy into their supervisors' management style and feel empowered to make sound decisions themselves
- There also needs to be an allowance for and an acceptance of mistakes (to the extent possible in law enforcement work)
- Errors will happen, and when they do, an appropriate response is critical **[look for understanding the issue and lessons learned rather than blaming]**

- When delegating responsibility, upfront communication becomes essential
 - Time should be spent detailing tasks and expectations at the outset rather than saying nothing and critiquing at the end
 - As with most remedies to micromanaging, communicating at appropriate times and in the proper manner is crucial
 - **Substitute micromanagement with leadership. Be resolute with strategy but flexible with tactics**
 - Create an atmosphere of open communications by encouraging employees to speak up and ensuring that they are heard
 - Value their opinions and judgment even if you don't agree
- White, (2010)

Progress reports could be requested at predetermined intervals for more complicated tasks.

Use “SITREPS”

- This way, subordinates do not have to guess about when to provide updates
- Supervisors do not have to badger employees for information
- Regular updates not only allow for better communication; they also allow for early adjustments when problems are found.

Praise is a necessary part of supervisor feedback

“Recognize and Appreciate”

- Too often, supervisors look to correct behavior rather than to provide praise.
- New supervisors are especially prone to this trap.
- ***When an evaluation is given only after mistakes are made, the shadow of micromanagement is cast.***
- Seeking out praiseworthy actions will change the perspectives of both supervisors and subordinates, each seeing the other in a more positive light

Specifically describe observable behavior

When I took command of the Benfold, I realized that no one, including me, is capable of making every decision.

I would have to train my people to think and make judgments on their own. **Empowering defining the parameters in which people are allowed to operate, and then setting them free. But how free was free?**

What were the limits? I chose my line in the sand.

Whenever the consequences of a decision had the potential to kill or injure someone, waste taxpayers money, or damage the ship, I had to be

consulted...short of those contingencies, the crew was authorized to make their own decisions. Even if the decision were wrong, I would stand by my crew. Hopefully, they would learn from their mistakes, and the more responsibility they were given, the more they learned.

- Captain Michael Abrashoft

Superior performance promotes motivation
among the people.

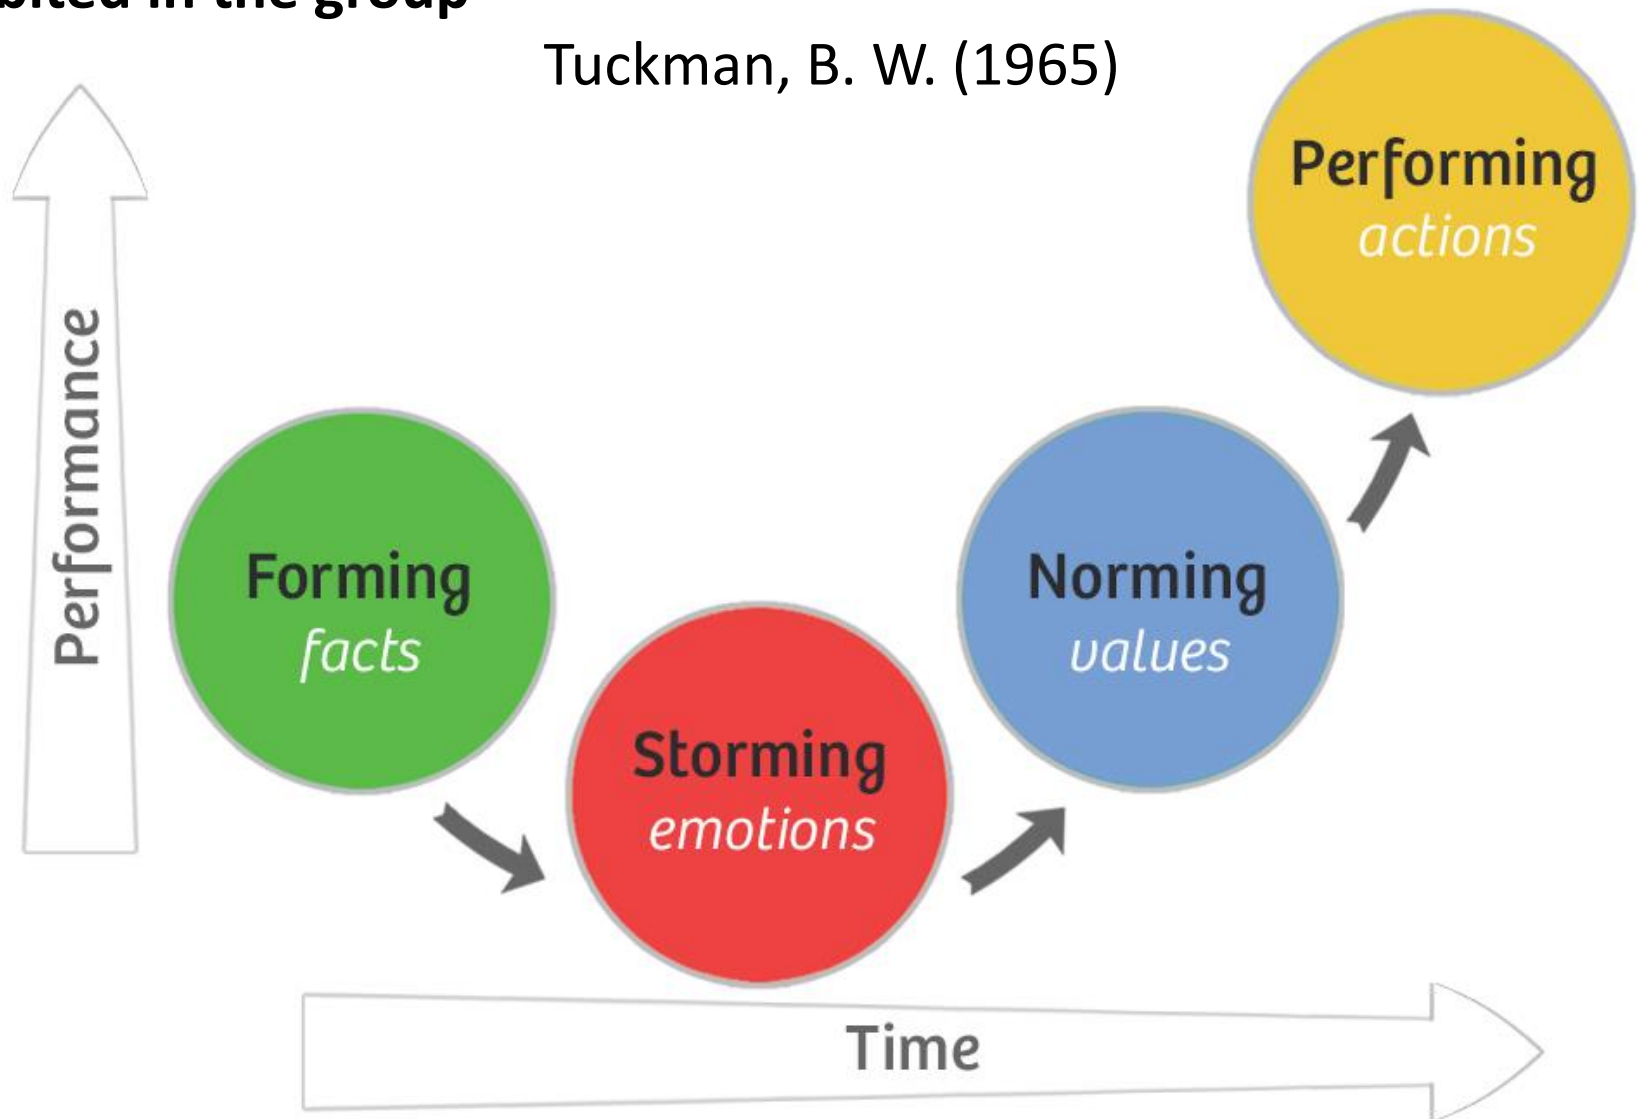

Being recognized as the best in and of itself
benefits everyone's status and self esteem.

**21st century operations often require team
approaches**

**“The servant leader builds outstanding
teams”
through premier leadership.**

Interpersonal stages of group development and task behaviors exhibited in the group

Tuckman, B. W. (1965)

Characteristics of Exemplary Teams

McChrystal. S (2015)

- Trust
- Relationship
- Common purpose
- **Awareness**
- **Systematic understanding**
- **Strong connectivity**
- **Shared consciousness**

A 2024 study looking at the role of team situational awareness has found that:

Weller, J. M., Mahajan, R., Fahey-Williams, K., & Webster, C. S. (2024).

- A team's collective understanding of the evolving situation is a critical determinant of team performance
- Team training has been shown to improve team performance across a range of indicators
- **Organizations can enhance team situational awareness through:**
 - ✓ *Shared mental models and structured communication tools*
 - ✓ *Inclusive leadership that fosters psychological safety and speaking up*
 - ✓ *System redesign and technology to support teamwork and decision-making*

BAD LEADER

VS.

GOOD LEADER

- **Me first**
- **Move up**
- **Guard information**
- **Take credit**
- **Hog the ball (Star)**
- **Dodge the ball (Blames)**
- **Holds grudges**
- **Manipulate others**

- **Others first**
- **Build up**
- **Share information**
- **Give credit**
- **Pass the ball**
- **Catches the ball (takes blame)**
- **Forgives/forgets**
- **Motivate others**

***Your priorities become their priorities
when you show them the benefits.***

**When you become a servant,
they become servants also**

The Burden of Communication

Communication

- Interpersonal communication should be considered as a strategic issue and should be *planned, developed, organized and controlled*

Naumovski, et al. (2017)

- Immediate supervisors are the information source preferred by employees and thus have more credibility with employees than senior executives
- Leadership communication shapes follower perception Men, (2014)
- Leadership is the nucleus of the organization's internal communication process Mast & Huck, (2008)

Communication is Central to Everything

Its collection, flow, and process

Having the ability to adapt to new environments:

- **Knowledge:** facts, information, and skills acquired by a person through experience or education; the theoretical or practical understanding of a subject.
- **Skills:** specific learned activities
- **Competency:** take "skills" and incorporate them into on-the-job behaviors
- **Capability:** the power or ability to do something
- **Adaptability:** being able to adjust to new conditions

Key question: *What influences the context, and the arena of probable consequences involved*

Communication is Social

Stewart, J. (2011)

“Preexisting Relationships matter”

- Humans are “social animals” that make sense and meaning out of things with others
- It is a collaborative process
- Collaboration does not mean we always agree
- We **“co-labor”** together to make meanings in response to one another
- The process between people uses both verbal and non-verbal (*people talk, look and listen in many ways*)

- Communication is **relational**, focusing upon the quality of contact that people create together
- **We construct meaning together**
- Culture and beliefs figures prominently into the process

Stewart, J. (2011)

- **Emotional intelligence plays a significant role in how people communicate with one another through self-expression, listening, resolving conflict, building trust, and adapting to different situations and settings**

Stephen, J. S. (2024)

The themes of conversation, dialogue, and dignity

- These concepts often intertwine, emphasizing the importance of respectful and meaningful communication.
- In conversations, dignity plays a crucial role, as it requires acknowledging the worth of all participants.
- A dignified dialogue fosters understanding, empathy, and collaboration.
- It's about listening actively, expressing thoughts clearly, and maintaining respect, even in disagreements.

Communication Competency arises from 4 basic components

Littlejohn and Jabusch, (1982)

- **Process Understanding:** ability to understand the dynamics of the communication event
- **Interpersonal sensitivity:** ability to perceive feelings and meanings
- **Communication Skills:** ability to develop and interpret message strategies in specific situations
- **Ethical Responsibilities:** Concern for well being of all parties and responsibility for outcomes

Being Responsive is tremendously Important

- Responsible relationship partners convey understanding, validation and caring
- They are sensitive to their partners feelings and want to make them feel comfortable, valued, listened to and understood
- These relationships develop through an interpersonal process in which actor's reactions to partners **influence partners perceptions of actor's responsiveness**

Cable and Reis, (2006)

People who perceive others as responsive become responsive themselves

How communication affects trust and engagement

Zeffane, Tipu & Ryan, (2011)

- **Managers' ability to listen, communicate clearly, and lead had the strongest effect on employees' organizational commitment**
- To promote and build positive trust relationships, managers must communicate as honestly and directly as possible with their employees, particularly during uncertain times

“Three Keys to Effective Communication”

Laurie McCann, University of California, Santa Cruz.

1. What you say and how you say it
2. What you hear and how you hear it
3. What you do with the information

Mirivel's Communication Model

Emphasizes 7 primary behaviors:

Mirivel, J. C. (2019)

- Greeting
- Asking
- Complimenting
- Disclosing
- Encouraging
- Listening
- Inspiring

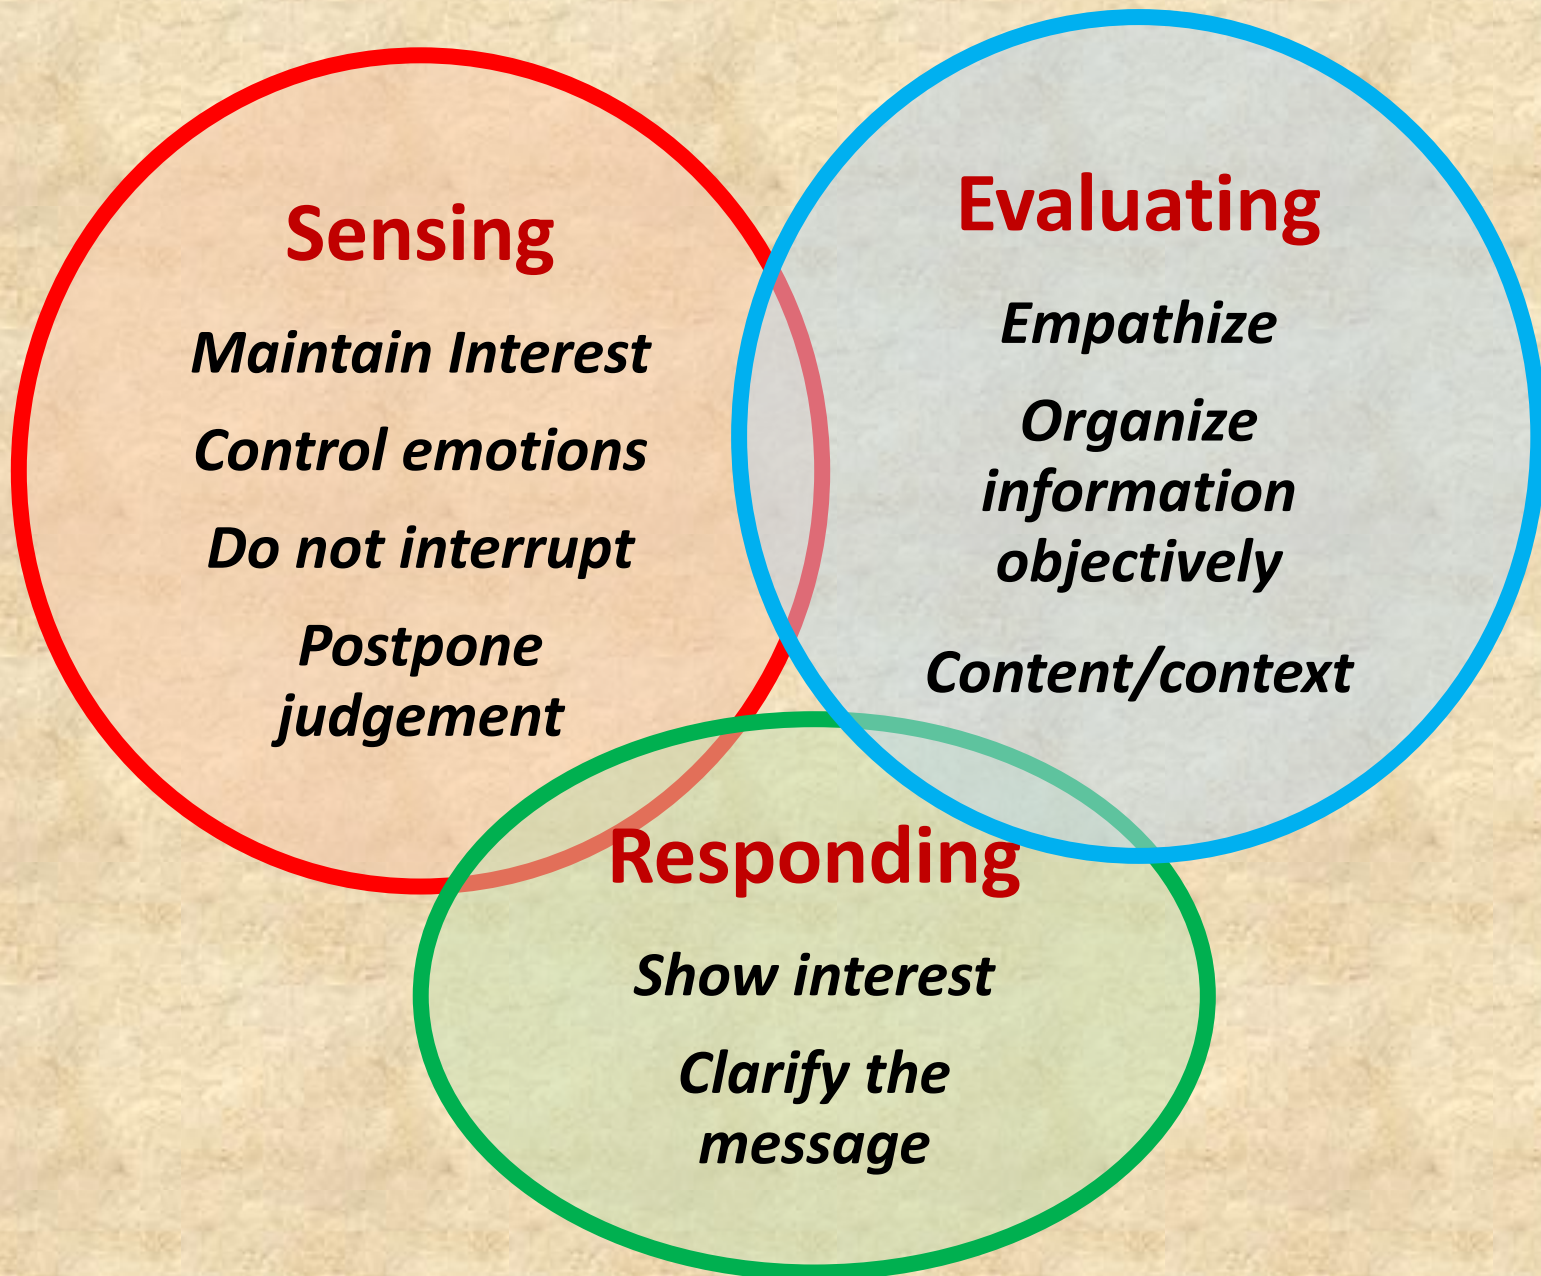

Importance of Aggressive Listening and Observing

Often, we listen to respond, and not to understand

Listening is not waiting to talk... listening is an important collection point where people pour out their emotions, hints, innuendos, motives, beliefs, opinions and suggestions through words, tone of voice and body language cues

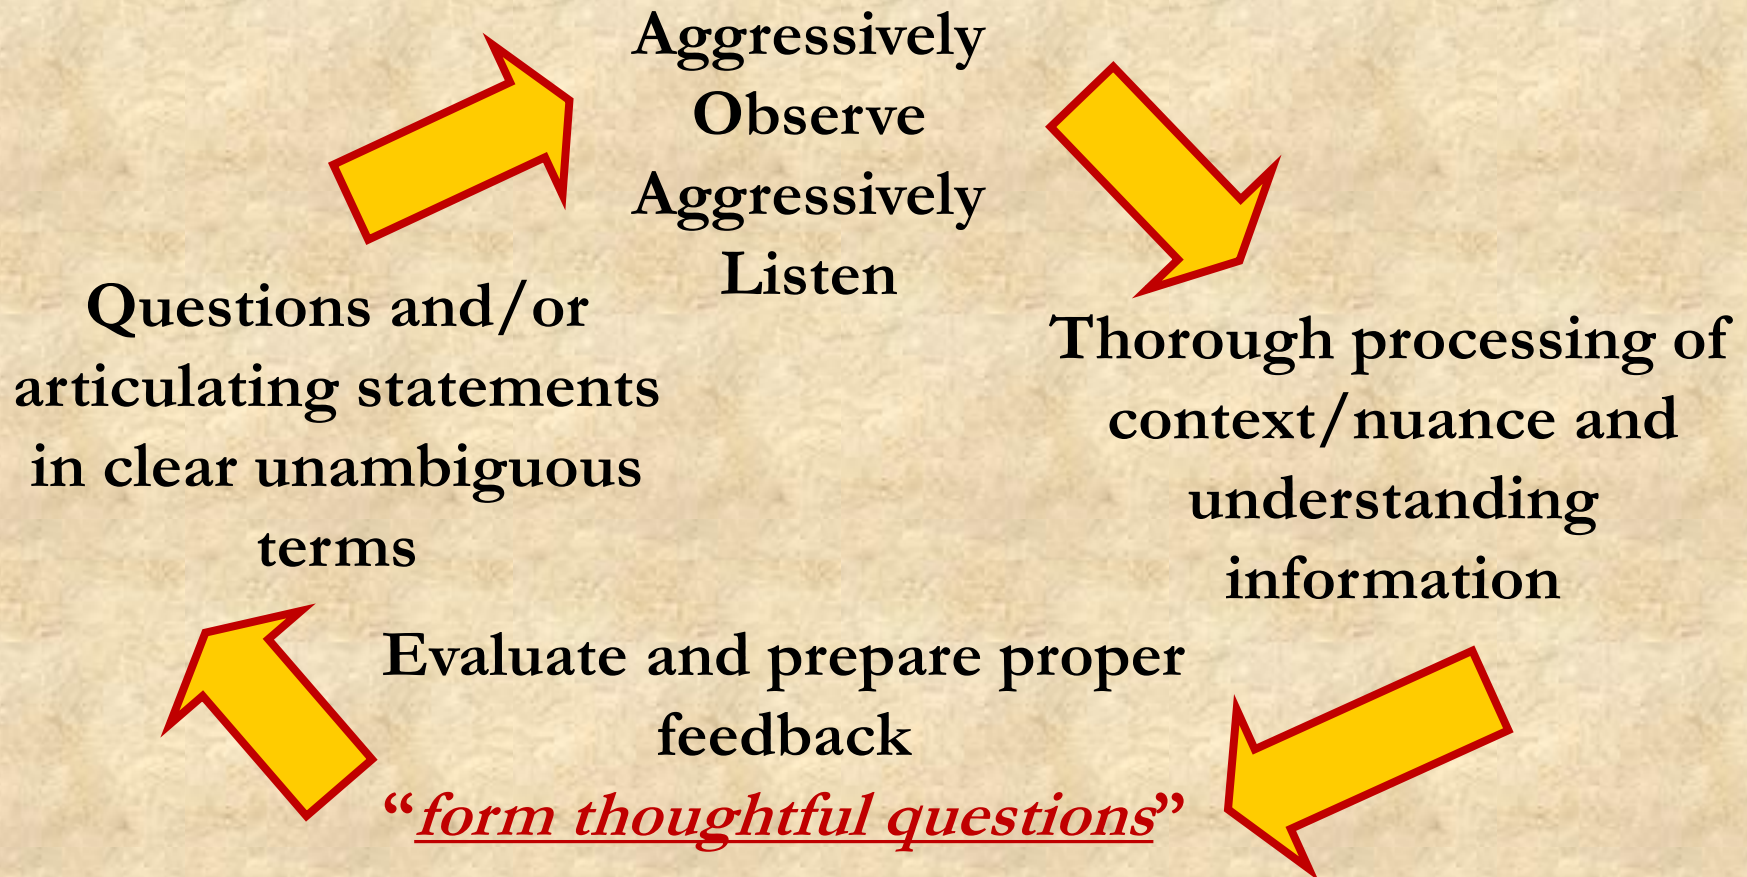

When your good at Listening, you will hear what People didn't say.

Active Listening Is...

Structured Communication Cycle

“Don’t make judgments until you have all the facts.”

COMMUNICATION

THE INFLUENCES AFOOT

- **The Perceived Understandings of Roles and Responsibilities:** Internal and external stakeholders, executives, managers, peers, and subordinates

Combined Influences afoot:

- **Current Assumptions:** What we know at the time
- **Our Beliefs:** Cultural, political, religious values, norms or morals. Subjective standards and analysis.
- **Field of Experience:** Sets of specific experiences or background that are parties in communication bring to bear on the interaction
- **Communication Context:** Environment for the communication interaction

Beware of the Curse of Knowledge

Making assumptions about what other people know
can cause a lot of confusion

Soeiro, (2021), Harford, (2021), Heath & heath, (2006), and Newton (1990)

- Once you know something, it can be difficult to take the perspective of someone who doesn't
- This phenomenon, known as the curse of knowledge, can lead to miscommunication, conflict, and professional stumbles
- To avoid this pitfall, one should slow down, think about what their audience needs to know, and try to catch themselves making assumptions

Whenever you assume that something is obvious to all parties, you're likely to leave yourself open to ambiguity.

- Slow down your communication, avoid assumptions
- Empathize with the person to whom you're speaking
- Ask yourself if they would really know what you're talking about, and if they really are as familiar with the topic as you are
- Think about the smaller skills and facts that need to be understood, too, not just the main point

- Communication behaviors, whether they involve verbal messages, gestures, or some combination thereof, usually occur in **PACKAGES**
- **Usually, verbal and nonverbal behaviors reinforce or support each other**
- All parts of a message system normally work together to communicate a particular meaning.
- **Nonverbal communication occurs in the dynamic actions of the face, voice, and body**

Matsumoto, D. R., Frank, M. G., & Hwang, H. S. (2013).

- ✓ **Context**
- ✓ **Clusters**
- ✓ **Congruence**

Turn-taking

A fundamental skill that underpins effective communication and social interaction

- Refers to the process by which speakers take turns speaking and listening, ensuring a balanced exchange of information and ideas.
- It's a crucial aspect of effective communication, enabling participants to manage the flow of conversation, fostering understanding, and building rapport.
- A well-balanced mix of [time to talk] self-disclosure, questioning, and agreement results in a highly engaging conversation

Lee, Y. K., Cho, W. I., Bae, S., Choi, H., Park, J., Kim, N. S., & Hahn, S. (2022)

Words and Vocabulary

- Words with different meanings or unknown definitions of words can be very problematic
- Sometimes ambiguity results when we use words that can be interpreted differently
- The context that we use in a sentence is important
- Pauses in verbal and Punctuation in writing is important

Logos

(Logic and Reason)

Kairos

(Timing)

Pathos

(Emotion and
Empathy)

Ethos

(Trustworthiness
and Credibility)

PAY ATTENTION

**Devote the time and effort to listen carefully
and *watch closely to be Ready to Probe***

- **Demonstrate respect, interest and attention through your behavior (words and non-verbal projections)**
- **Attentively watch the receiver's non-verbal reactions**
- *Often, what they don't say, and their reactions to what is said by you can speak volumes*
- **Sometimes people will provide cues to their attitudes and understanding, or signal their mindsets**
- **Be sensitive and observant before, during, and after communications**
- **Then probe when you sense a need**

Critical Understanding of Mindfulness and Perspective Taking

- **Mindfulness:** refers to individuals' ability to pay full attention to their immediate thoughts, feelings, and perceptions in a nonreactive manner and without forming judgments about the stimuli around them
Kabat-Zinn, (2003)
- Mindfulness shares a positive association with cognitive empathy
Vilaverde et al., (2020)
- **Perspective Taking:** is the ability to look at things from the point of view of others
Davis, (1983)
- Perspective taking has a strong positive relationship with cognitive empathy
- **As well as affective empathy** Matiz et al., (2020)

Two Functions of “Perspective Taking”

The process of taking or assuming another person's perspective or point-of-view.

- First, provides insight into one's own and others' thoughts, feelings, and experiences
- Second, and subsequently, to generate better understanding of one's own self and others

Perspective taking is associated with the promising possibility for positive personal change that can result from insight gained and increased understanding.

Dialogue Points

- The goal of dialogue is to understand the other
- Dialogue's main attribute is listening
- The objective of listening before speaking is to understand the other better. Following listening, the focus in dialogue is to openly share one's own point of view
- As dialogue is a reflective form of communication, changing one's opinion through internalizing thoughts, considerations and impressions from communications is seen as a strength
- Dialogue thus requires a degree of openness to others and oneself
- Openness includes allowing emotions, along with reflections, stories and faith, thus making space for 'the whole person'.

Nansenskolen, (2009).

An Example of demonstrating empathy through professional compassion

Look toward ways of working things out toward being able to help stakeholders versus “saying I’m sorry” or “I can’t help you” on its face.

- Work toward the **difficult “YES”** versus the easy “NO”, whenever possible
- *Do not default to can’t without trying to figuring out a possible how*
- *Try to be of service to stakeholders and they will remember it.*

Internal and External Stakeholder Management is a Critical Function and Important Process

A direct nexus exist between relationships and communication.

The better the relationship – the better the ability to communicate properly.

Thus - “the benefits of pre-existing relationships.”

Focus on the frequency and the quality of the interaction together

Stakeholder Communications

❖ Be professional:

- Demonstrate the appropriate conduct and behavior

BEWARE OF THE AUTOMATION BUBBLE AND BARRIER

❖ Be available and responsive:

- Maintain open and continuous lines of communication
- Provide a specific and defined answer
- Saying...“I’ll get back with you” is the functional equivalent of saying, “I don’t really care.”
- **ALWAYS RETURN PHONE CALLS AND E-MAILS**

❖ Be kind and courteous:

- Make a point to contact stakeholders when you don’t need anything
- **Do not fall victim to the “if you can’t hurt me or help me test”**

❖ Be honest, open and transparent

Effective and meaningful Communications with Stakeholders

❖ Be Aware:

- First, the identification of all internal and external stakeholders and why they are stakeholders
- Second, objective situational awareness evaluations:
 - **Evaluate and be sensitive to the stakeholders' roles and responsibilities within the context of the situation**
 - Try to walk in the other person's shoes, empathetic to their interactions, concerns and responsibilities to others
 - Weigh the issues involved that may affect others, and affect their roles and responsibilities
- Third, the nexus and relationships of different stakeholders toward you and each other

- Fourth, the content and frequency of engagement, dialogue, and follow up communications with them
- Get out and see people, stay in touch and connected to sustain relational influence...BE A RELATIONAL ENGINEER

The evaporation of influence can be far worse than the emergence of problems

Relationships with others are far bigger than one person
(Don't let ego and hurt feelings cause problems)

Successful, high-powered coalitions do five things:

Kanter and Cem Hayirli, (2022)

- Exercise moral leadership
- Operate at the speed of trust
- Find a balance of commitments
- Navigate competing coalitions
- Focus on solutions

Linden's (2010) collaborative leadership skills:

- Articulate purpose and vision
- Articulate the “Common Interest” involved
- Feel driven to achieve the goal, with solid but measured ego
- Listen carefully to understand others' perspectives
- Look for win-win solutions to meet shared interests
- **Use pull more than push**
- Think strategically, connect the project to a larger purpose

The differences in “Push” and “Pull”

Most situations require far more pull than push

(Linden, 2010)

Push is more about...

- Talking
- Telling, explaining
- Meeting my needs
- Getting you to do what I want

Pull is more about...

- Listening
- Asking, inquiring
- Trying to meet all of our needs
- Creating conditions in which you and I want the same thing

The Dangers of High Conflict

Ripley, (2021)

- Good conflict is a force that pushes us to be better people
- We need healthy conflict in order to defend ourselves, to understand each other and to improve
- In high conflict, the normal rules of engagement no longer apply
- **High conflict, by contrast, is what happens when conflict clarifies into a good-versus-evil kind of feud, the kind with an us and a them**

Managerial Communications Strategies and Applications

Hynes, 2011

One

Climate
Culture

Two

Relationship
Status
Interest
Emotional state
Subject knowledge
Communication skills
Purpose of message

Three

Specific Content
Medium
Environment
Timing

NOTE: Highly interdependent and affect each other concurrently (each variable is affected by the others)

Five Levels of managerial communication

Hynes (2011)

- 1) Intrapersonal** (Observing, listening and reading, necessary for decision making and problem solving that requires accurate information)
- 2) Interpersonal** (Two or more people exchange thoughts, sharing information, feedback and maintaining relationship)
- 3) Group communication** (Meetings that are formal or informal)
- 4) Organizational** (Operates within networks that link its members)
- 5) Intercultural** (Interactions between people of diverse cultures)

3 varieties of informal networks

Kelley & Caplan, (1993)

- 1) Communication Webs** (Who talks to whom)
- 2) Expertise networks** (Based on which people are sought after for advice)
- 3) Trust networks** (Driven by relationships)

Two main principles from research regarding the role of leaders and the networks they build

Wilburn & Campbell, (2012)

- 1) The ability to lead is directly affected by the networks a leader builds
- 2) A leader's behavior influences the type network structure that develops in organizations, which consequently impacts organizational performance

Network Insularity: Gathering of Liked minded people and similar perspectives from close relationships

Network Diversity: Developing other relationships that promote different more diverse perspectives

Increasing network diversity and fighting off insularity is a challenging task for a leader

“Assumptions”

The least little thing you do or don't do...

Say or don't say...

Impacts people's perceptions and leads to assumptions some true and some totally false.

***You must be deliberate to be self-aware
and proactively communicate to people
to prevent infectious rumors***

Rumors = Ambiguity x Interest

- Rumors are created when the available message is ambiguous
- If all information were available and clear from formal channels no rumors would be created
- When the message is ambiguous, but interesting rumors will result
- Information via the “grapevine” is 70% to 90% accurate, but always distorted

Organizational Communication

Downward

- Too many Messages
- Contradictory Messages
- Ambiguous Messages
- Unempathetic Messages
- No Message, Vision or Direction

Upward

- Risk fear for Retribution Regarding Feedback
- Leader Adverse Emotional Response
- No opportunity for Feedback
- No Solicitation or Encouragement for Feedback

Horizontal

- Culture that Discourages Networking
- Leaders not Encouraging or Providing Time or Opportunity for Networking
- Not Enough Channels or Network Opportunities

The chain of command

- Law enforcement agencies have formal channels (chain of command)
- Identifies the grouping of individuals to be accountable for task accomplishment
- Ensures that the grouping of responsible individuals are situationally aware
- Facilitates the analysis and evaluation of information (with other information)
- Informs decision making

We must ensure we keep people plugged in

A successful and effective open-door policy

- Provides **guidelines** that enable communication between everyone at all levels of the organization.
- Provides the expectation that officers will address problems first with their supervisor.
- An officer is always welcome to set up a meeting with a senior manager
- With a debrief following the officer's meeting with his direct manager or supervisor.
- If outcome is not satisfactory, the senior manager needs to bring the employee and supervisor together to assess the situation

An unstructured unregulated open-door policy will...

- Cause Problems and Dysfunction
- Disrespects your supervisors and managers
- Limits you to not having the proper and necessary and specific contextual knowledge and features known by supervisors
- You may empower a subordinate officer to circumvent the proper roles and responsibilities necessary for effective operations

The Truth about Hierarchy

MIT Sloan Management Review

Winter 2018

By: Bret Sanner and J. Stuart Bunderson

- When a group has a functional chain of command, disagreements can be more easily resolved so the group can take coordinated action
- **Key is that higher ups act in ways to support the group, rather than acting in their own best interest**
- **Higher ups must use their advantaged position to encourage members to collaborate, through information sharing, experimentation, and reflection**
- Individual goals and feedback will keep members focused on their task and outcomes

The Truth about Hierarchy

MIT Sloan Management Review

Winter 2018

By: Bret Sanner and J. Stuart Bunderson

How can teams benefit from Hierarchy?

- Can help the group generate, identify and select new ideas
- Create ground rules that enable and encourage group members to speak up
- Can promote group learning and performance

“Hierarchy doesn’t need to go away, but the hierarchy of responsibility has to change so that everyone feels like they can speak up if they see something wrong.”

“You need to CREATE A WAY for people to come forward with concerns.” (Edmondson, 2019)

Simon Sinek

- When authority is kept at the top, it is more likely that factions will emerge and compete for favor rather than work together for the good of the whole.
- In contrast, a leader that distributes their authority empowers their people to take responsibility to advance the group's interests information is shared, mistakes aren't hidden, and innovation thrives.

When our leaders give us the authority to make decisions, we feel inspired to make our own sacrifices to see their vision advanced.

Four repeating themes where officers circumvent the chain

- Supervisor not available
- Supervisors' inaction or non-responsiveness
- Supervisors not doing their job
- Confusion about who defers to whom
- Questionable behavior included forms of employee harassment, abuses of organizational policies and practices, and unethical behavior.

Factors that inhibit advancement of information

- **Failure to place the emphasis on and putting the work toward promoting on-going communication**
- Leader insecurity
- Failure to seek and promote value in feedback
- Personal censors (due to bias or beliefs)
- Piece meal evaluation from marginal information promotes a poor interpretation (failure to see the big picture)
- Blind to facts, ignorance or arrogance (Can't see it)
- Fear of retribution from a counter opinion or position (worry of negative image or status)
- Closed minded, intolerant environment

Team Communication and Team Friction

Khadpe, P., Kulkarni, C., & Kaufman, G. (2022)

- Research on what constitutes constructive team-communication patterns suggests that teams need to have the right amount of friction, which in turn must be managed well
- Too much disagreement, unresolved conflict, and disregard for others' opinions and criticism can trigger negative emotions, causing members to get angry and distressed
- This distress can spiral out of control and lead to a loss of viability

- The diverse perspectives and unique expertise of individual members make teams potent and so, for teams to be effective, it is crucial that team-members both speak up expressing their perspectives and that they engage with others' perspectives, in a respectful manner
- **Eliciting diverse perspectives by fostering open communication of ideas, opinions, and issues can help uncover new solutions, improve decision making, facilitate team learning and help identify problems**

When communicating “up and down” the chain of command...

Be sensitive to:

- **Ego’s...** “Do not send messages, when you can personally give them”
- **Saying the title and rank...** “Of subordinates and supervisors”
- **The terms...** “Us or we, rather than me, mine or I”
- **Breaks in the chain, going up or coming down...**
“Inform and coordinate about those communications where people are “skipped” do not assume they are or will be briefed”
- **Never let people be surprised or embarrassed by being left out of the know.**

Nine critically important steps to follow in the development of accurate and industrious communication skill sets:

1. Never gossip.
2. Never communicate indirectly or by proxy.
3. Never speak negatively about other supervisors or subordinates in front of other subordinates.
4. Never let relationships motivate or drive initial contact; treat everyone with respect and dignity and follow the proper roles, responsibilities, and jurisdictions.
5. Never put others in awkward, difficult communications positions.

6. Speak and be courteous with everyone encountered.
7. Respect the rank and the title of others in your communications (both verbal and written)
8. Intentionally craft your communications for transparency. **There is no such thing as “secret.”** (Don't ever put out what you can't take coming back)
9. Give constant on-going, or at a minimum weekly or bi-weekly status updates; keep subordinates and supervisors in the loop.

Managers and supervisors in the work unit must speak with **one voice**.

Subordinates must not be subjected to mixed messages or fears of one supervisor overruling another.

“Subordinates must never have an environment that results in supervisor shopping.”

Never put subordinates in the awkward position of having to tell their peers, what should come from the mouth of the supervisor.

Example: *“Tell Joe I said let you handle this one.”*

“Find Jill and tell her I said switch call.”

There is a difference between broad vision statements, request and specific directions.

Managers must be aware of how broad brush-nonspecific communications may adversely impact their people

- Be broad where the facts dictate to be broad, but never eliminate exceptions for common sense
- Deal with the individual, not the group regarding individual performance issues
- Do not impact the many over issues with the few

Practice how you communicate and keeping people plugged in, aware and in the loop

Be an active planner of communication

- ✓ When people are out of the office and return later. (Vacation and leave)
- ✓ When you attend a meeting or briefing that provides meaningful information to others
- ✓ During the course of an incident or event where important information is generated, collected, or disseminated.

Meetings as a means of communication in the work unit

“to meet or not to meet...that is the question.”

- Meetings impact your people's time
- Meetings interrupt work
- Meetings are additional work
- Meetings may not be the most efficient way in some cases to dispense or gather information
- Meetings structured appropriately may encourage valuable feedback
- Sometimes meetings are very necessary and important and the best method to communicate

Think Tanks or Mosaicking

- Select group organized to study a particular subject (such as a specific case, policy issue, or a scientific problem) and provide information, ideas, and advice
- Structured evaluation, assessments, and feedback
- Premortem versus Postmortem paradigm
- An interactive platform for Mosaicking
- Devils advocate role

Caution: Beware planting the “Boss” opinion seeds

When to conduct and how to communicate in meetings

Prewitt, (1998)

- **Be clear about the purpose of the meeting:** Establish its importance at the outset
- **Is the meeting necessary:** Clarifying what the meeting will accomplish (results orientation)
- **Prepare for the meeting:** Time, place, duration with a narrowly tailored agenda distributed so participants can be prepared and understand the anticipated issues (*be sensitive to duration*)
- **Avoid haphazard decision-making:** Proactively seek feedback and build consensus
- **Establish criteria to evaluate proposed solutions:** Provide sufficient time for follow-up

Be Observant During Meetings

- Pay attention to emotional expressions during meetings, as they can significantly impact decision-making processes and outcomes
- When presenting proposals, be prepared to respond to emotional displays from stakeholders, particularly anger, and consider how to address their concerns while maintaining the integrity of the proposal

Van Den Oever, K., & Shropshire, C. (2024).

Communications is a learned behavior

Fairhurst, (2011)

- Many of us remain unaware of how our language shapes context in our organizations
- The traditional communications model is narrow and lacks the complexity and richness
- How we co-create meaning together is important
- Reality is subjective
- Framing builds reality for others

OUR COMMUNICATIONS

**Reflect on these three questions
and ask which question is most like you**

1. Do you frequently lack an edit function where you speak exactly what's on your mind?
2. Do you always try to say what is appropriate to the situation, trying to stay within polite social norm?
3. Do you carefully choose your words with a heightened sensitivity and awareness toward language forms and usage?

From Barbara J. O'Keefe's research on Message Design Logic

When communicating, people use one of three design logics to form their messages and interpret those from others:

- Expressive
- Conventional
- Strategic

These design logics can gauge your sensitivity to the framing concept.

Expressive

- Least sensitive to the framing concept.
- Primary communication goal is to express yourself.
- Friends may remark that you lack an “edit” function; you tend to be blunt and very literal.

[Often the Expressive reacts instead of responds]

- On the positive side, others may find you honest, genuine and trustworthy because you don’t “play games.”

Conventional

Most managers fit into this category

- Some sensitivity to the framing concept.
- Social context influences our thoughts (go along to get along)
- Your focus is on what is *appropriate* given the context.
- However, you tend to see the context as “fixed.” (thus your reacting to context)

Strategic

- Great sensitivity to the framing concept.
- Heightened sensitivity to language selection and delivery (careful wordsmith)
- People and situations are not fixed; rather they are created and negotiated through language.
- In difficult situations context is redefined
- However, you may be perceived as manipulative when self-interests dominate.

Message Design Logics

- **The Strategic** has the capacity to be conventional and expressive
- **The Conventional** does not have the capacity to be expressive
- **The Expressive**, is probably expressive all the time
- **If you have all three, you are probably strategic**

The Strategic understands that:

- Effective framing is the ability to define the situation in the “here and now” in ways that connect with others
- Through framing, we create the realities to which we must then respond (*critically important in a V.U.C.A. world context*)
- **It is the ambiguity or uncertainty of the situation here and now that opens up for interpretation** – and thus an opportunity to emerge as a leader (or failing to emerge as a leader)

The skill of framing opens the range of what is socially constructed in our world

Three (baseball) umpires disagreed about the task of calling balls and strikes

- The first one said, 'I calls them as they is.'
- The second one said, 'I calls them as I sees them.'
- The third and cleverest umpire said, 'They ain't nothing' till I calls them'.
----- Herb Simons (1976)

The label 'strike' reifies an action, objectifies a reality, and prompts us to act as if these objectivities are real

By Framing

We guide and help to make sense out of things by changing one particular meaning over another

- The strategic can see the context from multiple angles
- That ability to evaluate those perspectives combined with a heightened sensitivity to and skilled use of language is central to shape things and place more meaning to one thing over another
- The way we interpret things helps to shape understanding and influence behavior

Framing

Fairhurst & Sarr, (1996), Pondy (1978), Entman (1993), and Weick (1979)

- The ability to shape the meaning of a subject, to judge its character and significance
- To hold the frame of a subject is to choose one particular meaning over another
- When we share our frames with others (the process of framing), we manage meaning because we assert that our interpretations should be taken as real over other possible interpretations
- **We do not suggest that every subject is suitable for framing**

Framing

Fairhurst, (2011)

- To the extent that uncertainty or ambiguity mark a given subject, what is real and important is often what we say is real and important
- Often, we are powerless to control the turbulence of our environments, but can control the context under which the turbulence is seen
- Framing shapes meaning of the subject
- We manage meaning asserting our interpretation over others
- We use language, thought and forethought

Framing

Fairhurst (2011)

- **Leaders that understand their world can explain their world** (*they can create rich mental models*)
- When we can see from different perspectives, we have the ability to shape “the here and now”
- This ability to see from multiple angles defines our communication strategy then using our mental models we develop our thoughts
- We then shape the nature of the realities to which we respond with our words
- We are managers of meaning and co-constructors of reality

Three Important Techniques for Framing

- **Develop your mental models** (acumen)
- **Prime for spontaneity** (program your unconscious mind)
- **Use positive emotional contagion** (use high energy non-verbal expressions and credible empathic illustrations that connect with people)

6 rules for the objective framing of issues

Fairhurst, (2011)

- Remain sensitive to and manage context
- Define the situation in the most objective and specific terms
- Apply ethics
- Interpret and evaluate uncertainty
- Design a response from the deconstruction of the facts and evidence guided by a critical thinking process
- Control spontaneity in both thought and communication

Do Not Spin OR Bullshit

- Questions of right and wrong arise whenever people communicate
- Ethical communication is fundamental to responsible...decision making and...enhances human worth and dignity by fostering truthfulness, fairness, responsibility, personal integrity, and respect for self and others

Successful leaders constantly “preach” and “cast” vision to leverage their influence

Vision is that state the leaders wishes to be in...the position, status, and condition of organizational culture through individual behaviors

Vision Identifies Your Destination

- **First**, the leader must understand and develop the components of their vision
- **Second**, they must articulate their Vision and communicate the theme early, continuing a consistent theme to solidify its meaning and promote its influence
- **Third**, connect how that vision connects and enhances the organization, employee and the purposeful job performance (story line)

Elements of Your Vision

- Values
- Principles
- Purpose and Meaning
- Direction
- Expectations
- Goals and Objectives

Casting Vision

- Words create worlds
- *With belief we rise to our leaders' expectations*
- **Vision provides expectations and shapes culture**
- The leaders target is broad, general to specific in nature, preaching to all employees in a very open, redundant, repetitive and public fashion
- The leader must role model the responsibility and demonstrate the accountability
- **Make known in a very serious open, clear and repetitive manner the ZERO-TOLERANCE for specific inappropriate behaviors from anyone at anytime**

Focus on Job Purpose and Employee Meaningful Contribution

- You must articulate and demonstrate your belief and loyalty to mission and its purpose
- Sell that purpose, belief and faith to your people (statements, examples and stories)
- Show how they factor into the purpose and are important towards its ends in becoming meaningful

PROMOTES THE SHARED VALUES AND BELIEFS

3 Stages of “Preaching” Vision

1+2+3 = How we do things around here

1) Proactive (The Future)

- Modeling and mentorship
- Framing strategic objectives
- Framing our focus of issues
- Preventive, prophylactic, advice, guidance, or council

2) Operational/Situational (The Present)

- Tactical issues
- Performance expectations
- Roles and responsibilities
- Active Feedback

3) Oversight and Mentorship (The Past)

- Responsibility and Accountability
- Opportunities for operational feedback (lessons learned)
- Focus on individual professional growth and development

Visions Role in Situational Awareness

Ensure each subordinate possesses the situational awareness required for their responsibilities

Weller, J. M., Mahajan, R., Fahey-Williams, K., & Webster, C. S. (2024).

At a practical level, situational awareness involves:

- Perceiving and monitoring relevant cues and information in the environment [or situation]
- Integrating and interpreting this information to comprehend the current situation within and without the team [agency or incident]
- Using this understanding to anticipate future states, plan ahead and anticipate change [proactive adaptability]

Translate that vision into a clear strategy about what actions to take, and what not to do.

“PROACTIVE EXPECTATIONS”

- Develops standards and conduct and shapes the “Culture of the workplace”
- **Sustains the climate of the workplace**
- Puts people “on Notice”
- **Prevents, reduces and mitigates problems**
- Helps people focus and understand the important issues afoot (Emphasizes your expectations, enhances awareness and promotes prioritization)
- **Promotes “consequence” thinking over reactionary thinking**
- **SERVES AS DEVELOPMENTAL FEEDBACK IN GENERAL TERMS**

Expectations as a part of Vision

- Leaders play a key role by setting clear unambiguous expectations so that employees understand the objectives and the key results that will demonstrate achievement
- It frames how they can perform their job to a reasonable and acceptable standard
- It becomes their “North Star” and “Blueprint” to complete their task in a thoughtful and narrowly tailored manner
- **Setting clear expectations is important for every level of an agency and holds all employees accountable for their job responsibilities.**

The Importance and Utility of Vision

Ed DeVelasco

- If the lower-level personnel understand the vision and the values (**How we do things**) *then it becomes accountability at the lowest level.*
- They do not have to wonder or ask supervisors; they know the expectations and understand the consequences involved

THE BULK OF MANAGERIAL PROBLEMS ARE FROM

(Policy, Practice, or Rule Violations)

Ronal W. Serpas

- Misapplication
- Misunderstanding
- Miscommunication

OR

- Misplaced values and convictions
 - Deteriorating behavior from professional to personal
 - Character Corrosion and Erosion
 - Un-professional, un-ethical or criminal conduct

Two-Thirds of Managers Are Uncomfortable Communicating with Employees

By Lou Solomon

MARCH 09, 2016

Why don't leaders have feedback conversations more often?

- Because not all leaders are comfortable with the responsibility. The fear of hurting people's feelings and dealing with potential drama and retribution hold us back.
- 69% of the managers said that they're often uncomfortable communicating with employees.
- Over a third (37%) of the managers said that they're uncomfortable having to give direct feedback about their employees' performance if they think the employee might respond negatively to the feedback.

Jen Cohan Crompton and Jacob Morgan on Subordinate/Manager Dilemma

Managers Need to Encourage Subordinates to *Speak up*...

- They need to clarify their understanding to make sure it aligns with what the manager was thinking
- If the employee has any apprehension or question from the beginning, this will only grow if the scope is left without clarification.

**NOTE: EMPLOYEE VOICE = Your Awareness +
Their Engagement**

Managers need to ensure that they do not forget, be scared or worried about sharing information.

- Often, managers only share a small piece of the puzzle, which means that the subordinate never really understands the big picture
- This leads to confusion regarding the ultimate goal and the subordinate might not understand how their immediate responsibilities to contribute to the big picture.

People need feedback to develop and increase their skills

- Study after study has shown, an issue of understanding, thinking and learning about feedback and gaining feedback about the practice of feedback
- Like most things, it is a learning process

Wilkinson, D. (2019)

Giving and receiving feedback is a critical organizational activity which has been shown to be an important component to help to develop a range of outcomes, including:

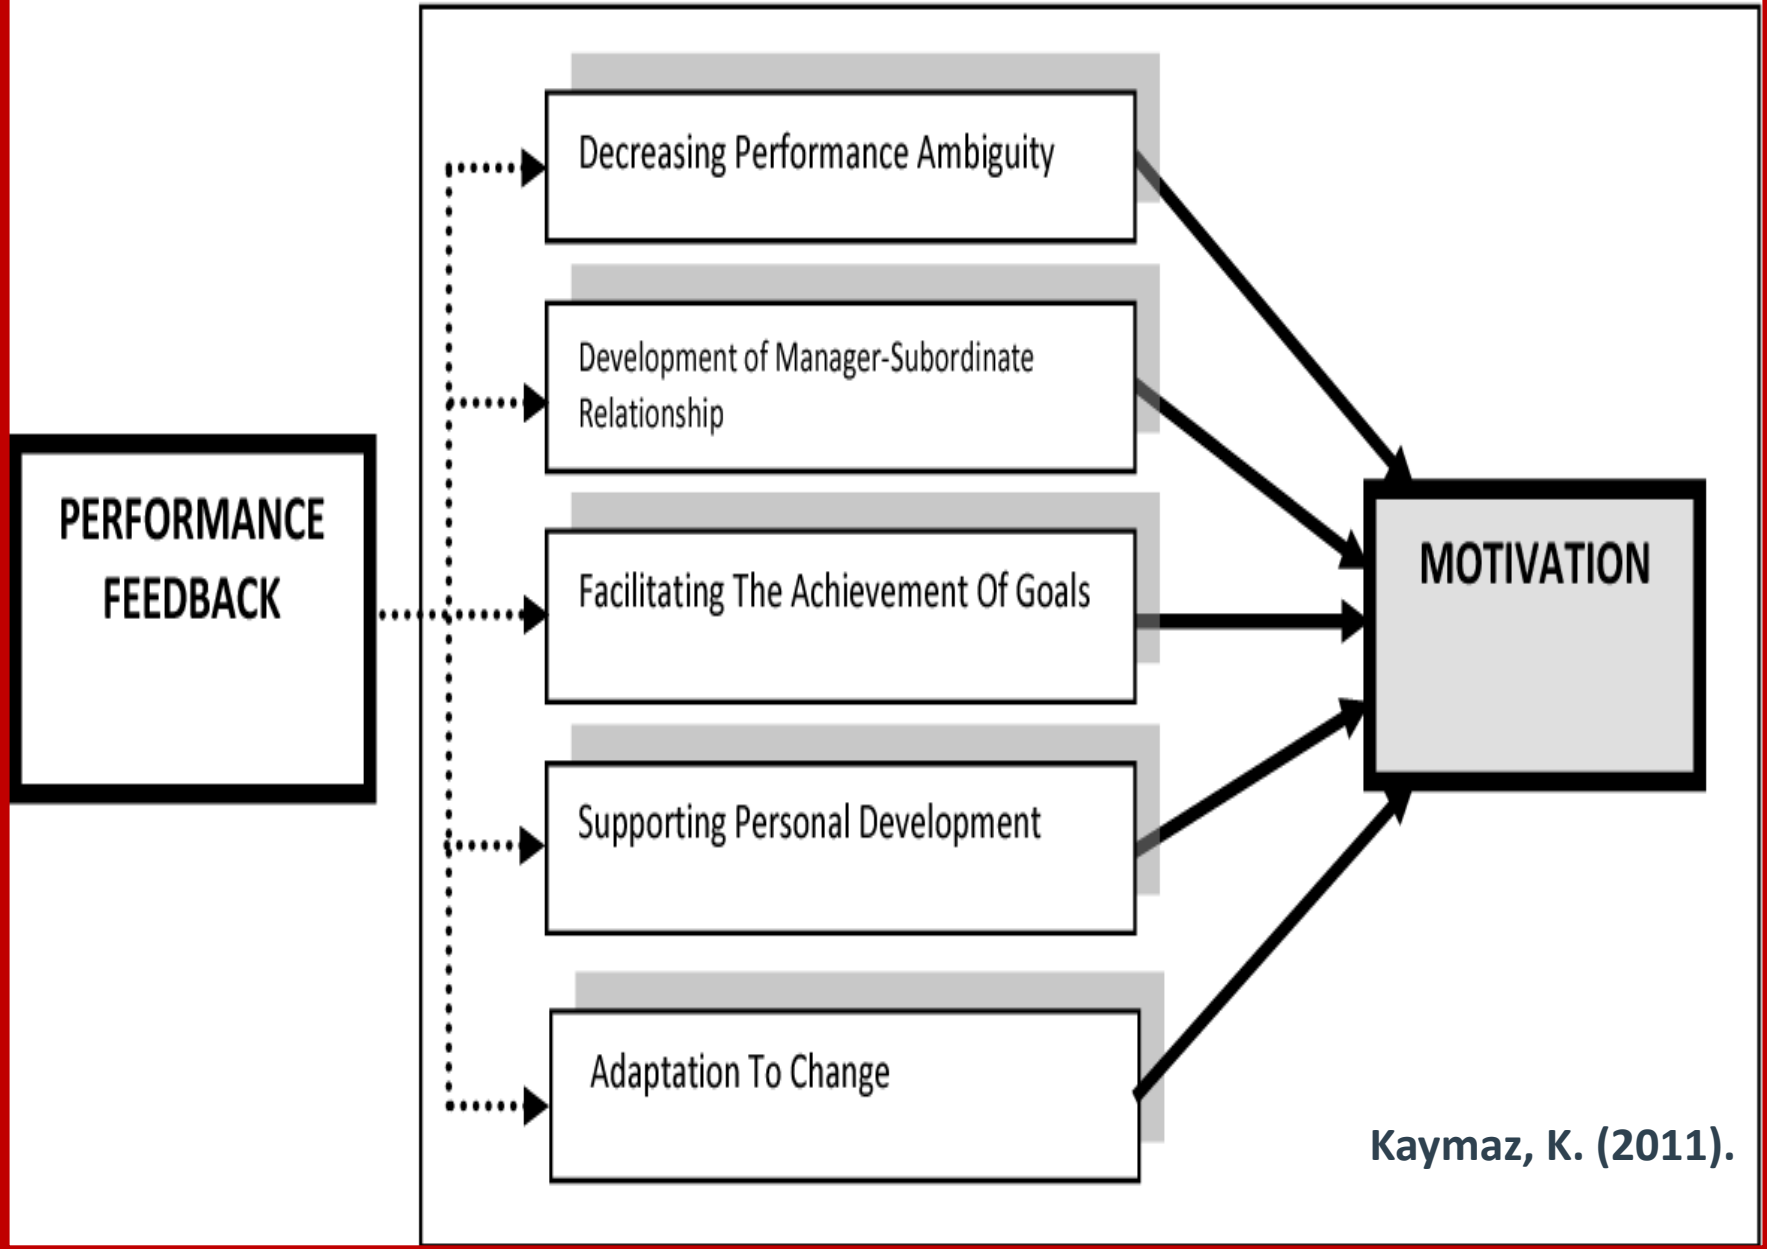

- Personal and professional growth
- Performance
- Positive relationships
- Change
- Innovation
- A learning orientation
- Improving job satisfaction and engagement

Boud, D., & Dawson, P. (2023)

Feedback is a powerful and constructive practice that can induce changes in routines through three different means

Adapted from: Blakcori & Aroles, (2021)

- **Making sense:** meaningful feedback reenforcing good performance or corrective feedback regarding changes required for a routine with an understanding the roles and responsibilities as well as the purpose
- **Rationalization.** “Acknowledging” the positive or negative aspects of a routine and contextualizing the importance in developing the case for rationalized change
- **Reviewing:** emphasizing performance expectations and outcomes in employees’ evaluations

Understanding Feedback Loops

Feedback loops are processes where the output of a system is fed back into the system as input, which can influence future outputs.

Feedback Loops are Critical in Contemporary Law Enforcement Organization:

- **Continuous Improvement:** They provide a mechanism for ongoing learning and development, allowing organizations to refine processes, products, and services based on real-time input and performance data
- **Enhanced Communication:** Feedback loops facilitate open communication between employees and management, ensuring that everyone's voice is heard and valued, which can lead to increased engagement and morale
- **Problem Identification:** They help in identifying issues and challenges early in the process, allowing for timely interventions and solutions before problems escalate.

- **Alignment with Goals:** Regular feedback helps ensure that individual and team efforts are aligned with organizational objectives, promoting a shared understanding of priorities and expectations
- **Employee Development:** Constructive feedback supports personal and professional growth, guiding employees in their performance and helping them develop new skills
- **Innovation:** They encourage a culture of experimentation and risk-taking by providing a safe space for sharing ideas and learning from failures, fostering innovation within the organization

- **Adaptability:** Organizations that actively utilize feedback loops are better equipped to adapt to changes in the market or internal dynamics, enhancing their resilience and competitiveness

Feedback loops are vital for fostering a culture of openness, continuous improvement, and adaptability, ultimately leading to greater organizational effectiveness and success.

Getting the “Whole Picture”

- **Single-loop learning** is defined as an attempt to “solve problems with minimal variation in method” and without reviewing the underlying assumptions driving the solution.
- **Double-loop learning** model refers to a system’s thinking mental model that replaces the “reductionist, partial, narrow, short-term view” of the single-loop learning model with a “holistic, broad, long-term, dynamic view”

Feedback literacy competency framework

Boud, D., & Dawson, P. (2023).

- **Plans feedback strategically** - Recognizes feedback as a strategic tool and mitigates the adverse impacts of multitasking
- **Uses available resources well** - Allocates feedback resources for maximum impact, guarantees easy accessibility of feedback information and prepares others for various feedback-related roles
- ➔ **Creates authentic feedback-rich environments** – Models effective feedback practice, makes feedback a common ongoing occurrence and helps others use feedback and information from a variety of sources

- **Develops and coordinates colleagues** – Briefs others on feedback priorities, trains colleagues and staff, and shares successful feedback practices
- **Improves feedback processes** - Gathers data on feedback effectiveness, implements procedures to determine whether individuals have acted upon feedback and leverages insights from feedback processes to enhance their own practices
- **Develops the feedback literacy of others** – Explains feedback to others and their role in it, promotes feedback and sets expectations about the use of feedback

- **Presents feedback in the context of standards and criteria** - Directly correlates feedback to the standards to be met, encourages individuals to assess their own work against clear criteria, evaluates rubrics from the perspective of their utility for feedback purposes
- **Manages the timing, placement and order of feedback sessions** - Arranges feedback events in a manner to amplify their impact, guarantees timely availability of feedback for succeeding tasks and schedules feedback activities at the early stages of team and project cycles

- **Leverages technology to facilitate feedback where suitable** - implements audio/video/screencast/AI feedback as required, employs suitable systems for logging and retrieving feedback information, and utilizes technology to foster more efficient and scalable feedback processes

➤ **Note:** [the problems with using text and e-mail]

- **Formulates plans to deliberately trigger action** - Offers compelling justifications for the significance of action in feedback processes, shapes activities so individuals can integrate feedback responses into their work and encourages people to demonstrate how they have applied feedback information in their tasks.

- **Creates feedback processes that incorporate peers and others** - Designs exemplary activities that involve employees in providing feedback, enables and prepares individuals to participate in peer feedback processes and links individuals with other sources of feedback
- **Recognizes and addresses employee needs** - Tailors their remarks to individual needs, ensures individuals receive actionable information and correlates feedback inputs to employees' self-evaluations of their work

Why this Matters?

Research Brief Oxford Review

Dr. David Wilkinson

- This matters, because it enhances the overall effectiveness of the feedback process
- It helps employees understand, interpret and apply feedback in a constructive way, fostering personal growth and improved performance
- Additionally, it aids in creating a culture of continuous learning and supports the development of more effective team dynamics and improved organizational efficiency

HOW TO GIVE FEEDBACK

Situation–Behavior– Impact (SBI) feedback method

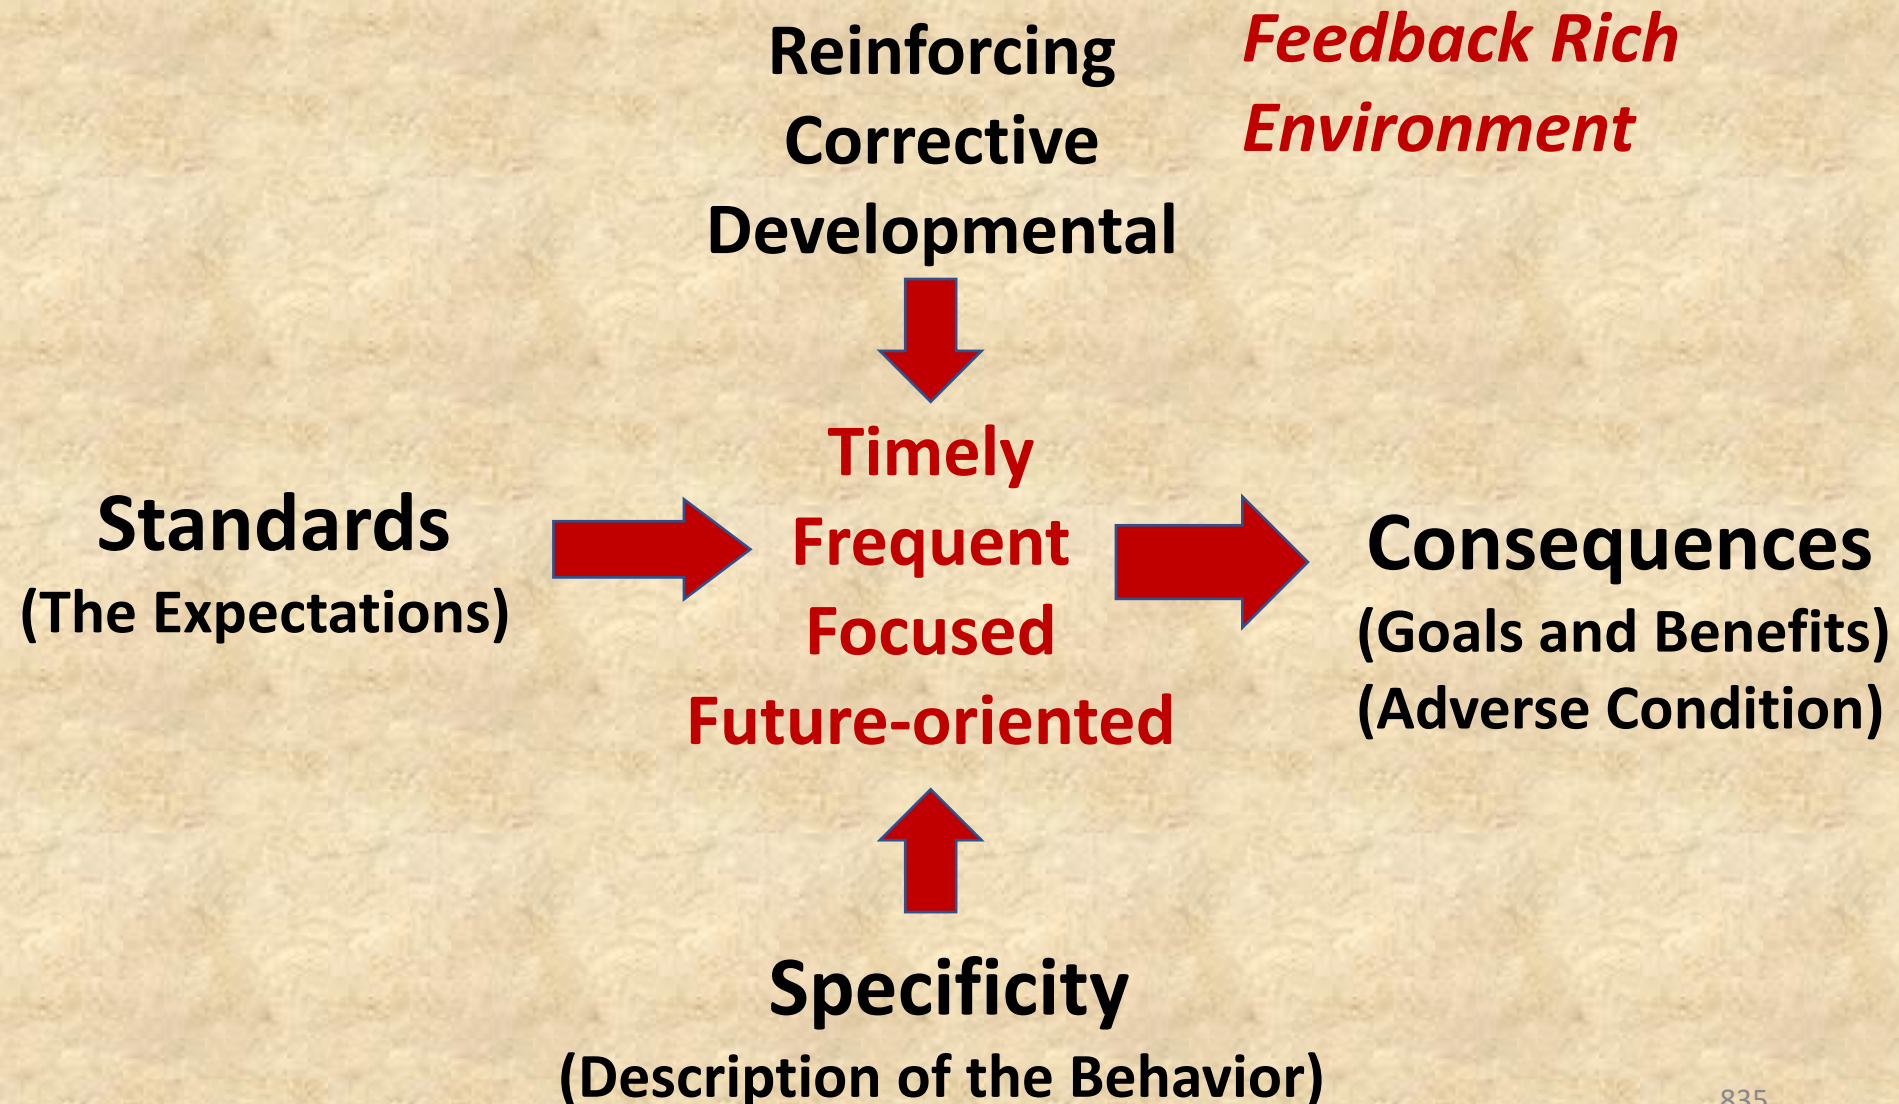

Weitzel S. (2007), Harrelson, G. L. (2024)

- **S** - the specific description and clarification of a specific situation at the time of the behavior that is happening
- **B** - needs to focus on the description of movements and provides clear factual information about the behavior, rather than judging the behavior
- **I** - should emphasize or indicate the impact of the behavior on the task performance (Context and Circumstances)

REQUIREMENT FOR SPECIFICITY

- Of all elements, “specificity” is an important element for providing the context
- Specifics provide credibility through objective details
- The function of providing specific contextual information helps the employee reproduce the situation of a given event
- Such illustrates and highlights the incorrect or improper behavior over and beyond any personal dynamics

FEEDBACK MODEL

A feedback rich environment promotes psychological safety where managers and employees trust and support each other

Where defects and problems are easily surfaced and never hidden

Where new ideas find fertile ground for testing to facilitate improvement

Speaking up was associated with:

- More positive responses to growth opportunities and participation in decision making domain questions
- Receiving feedback about one's performance
- Individuals who received appropriate feedback about their performance were the same ones that find it easier to speak up

Nature of Feedback

- Feedback is primarily a managerial resource that serves to motivate, direct, and instruct the performance of employees
- Feedback must be sincere and specific in nature
- Feedback is not only an organizational resource, but as an individual resource as well
- **Individuals are not merely passive recipients of feedback, but also active seekers** Ashford and Cummings, (1983)
- Research provides the evidence to support the assertion that people love feedback, only the right sort of **(non-judgmental)** feedback that helps them grow and supports their identity

- Feedback is descriptive information regarding a learner's performance in a given activity
- Feedback is not “what we think of their performance”
- Rather, feedback is meant to be ‘descriptive’ or an account of the facts or what actually happened
- **Effective providers of feedback learn to describe rather than interpret or judge** Wilkinson, (2019)
- Study after study has shown, an issue of understanding, thinking and learning about feedback and gaining feedback about the practice of feedback. Like most things, it is a learning process. Wilkinson, (2019)

KEY

A few foundation principles for providing feedback

Gerald Knesek

University of Michigan – Flint

1.) Trust: is a quality of relationship issue. It reflects on your character as a person

2.) Listening: requires an openness to hear the feedback that is being given

3.) Candor: When trust is present in the relationship and there is a real openness to understand what is being said, the ability to speak with greater candor exists

These three foundation principles work in conjunction with each other and cannot be separated in providing effective feedback.

The concepts of civility and candor naturally inherit a tension between them, but have tremendous benefits to a leader

- Current research emphasizes that when people choose to prioritize civility and candor, employees and their workgroups can enjoy the best of both worlds.
- The reality is, we can tell the truth without being uncivil” and “it is entirely possible to express opinions without hurting people” Gardner, (2004) and Hershcovis, (2012)
- Working in close proximity is bound to have conflict and communication issues

How these issues are expressed can make all the difference.

- The manner in which conflict is expressed will influence perceptions and reactions, changing the way the conflict process unfolds, the impact it has on the parties involved, and subsequent outcomes

Weingart et al., (2015).

- People appraise each others' authenticity and good intentions when integrating civility and candor
- Authenticity signals that communicators are credible and genuine and good intentions signal that communicators do not mean harm leading to more positive outcomes

Miner et al., (2018); Walumbwa, Avolio, Gardner, Wernsing, & Peterson, (2008)

Radical Candor

Scott, K. (2017)

- Radical Candor framework aligns well with a discussion of civility and candor and may be useful to consider in this context.
- Uses a two-dimensional approach to communicating feedback.
 - *Challenge directly*
 - *Care personally*

Four feedback techniques:

- **Ruinous empathy** (i.e., high caring, low directness)
- **Manipulative insincerity** (i.e., low caring, low directness)
- **Obnoxious aggression** (i.e., low caring, high directness)
- **Radical candor** (i.e., high caring, high directness).

CARE
PERSONALLY

RADICAL
CANDOR

CHALLENGE
DIRECTLY

Ruinous
Empathy

Manipulative
Insincerity

Obnoxious
Aggression

Of the four quadrants, Scott (2017) posits that

- Radical candor is the most productive way to provide feedback because it helps to build relationships and leads to higher-quality work whereas the other three quadrants depict pitfall behaviors that can make feedback less than successful.

Two Essential Elements in the Feedback Repertoire

- **Appreciation:** fosters trust, helping, and the formation and maintenance of social bonds that promote workplace success.
 - Feeling appreciated are important for employee satisfaction and well being,
- **Recognition:** Employee recognition is seen as a strong contributor to boosting employee morale and creating a connection to the organization.
 - Recognition instills greater satisfaction and loyalty, which tend to correlate with greater productivity

Three (3) types of Feedback

Knesek, (2015)

1.) REINFORCING FEEDBACK (positive feedback)

- Focuses on sustaining positive behaviors and exceptional results “Praise”
- **It looks for opportunities to recognize what a person is doing right**
- Everyone likes recognition for situations or behaviors that they performed well
- Reinforcing Feedback in a feedback-rich environment is finding reasons and taking opportunities on a daily basis to recognize and reinforce positive behaviors and excellent performance

- It includes noteworthy effort, rigorous thinking, creativity, and intermediate results.
- Reinforcing feedback is the easiest to give, yet we do not give enough of it
- It is not that we do not have time to give it, it is more a question of changing our daily behavior to make sure that we give it
- Reinforcing feedback not only reinforces current behavior, but also encourages people to want to do better and achieve even better results **(Done in Public)**

Reinforcing OR Positive Feedback

- Provides a sense of encouragement, recognition of a job well done, and self-esteem enhancement
- However, receiving feedback only on specific facets of one's performance may be discouraging without a "big picture" understanding of how well or poorly one is performing (Medvedeff, Gregory and Levy 2008)

Central is the specific content, overall context and authenticity, sincerity and truthful articulation

OGO Study Dave Novak
**“Recognizing Employees Is The Simplest
Way to Improve Morale”**
Harvard Business Review
May 9th, 2016

- 82% do not feel their supervisors recognize them enough for their contributions
- On average 50 days had past since employee felt recognized at workplace
- 76% save their handwritten “thank you” notes

Steps when communicating **positive** feedback:

- 1) Describe results/conduct in **SPECIFIC details**
- 2) Tell why the conduct/results are **important and purposeful**
- 3) Encourage, empower, **praise in public setting**

2.) Corrective Feedback

- Focuses on specific actions or behaviors that should be taken to correct a given situation or performance issue
- It clarifies or provides a better understanding of a given situation or performance issue. It is usually prescriptive in nature focusing on a better way of doing something, yet is given in a way that preserves a person's dignity
- Always done in a **private setting** in a positive productive manner that promoted mutual respect, trust, and learning
- Its focus is to incorporate understanding into the importance to uphold standards and appropriate conduct and performance in a specific situation to sustain agency credibility and employee success within the context of agency function

4 C Model of Corrective Feedback Model

Carroll, A. (2014)

Context: explain the situation or behavior that triggered your feedback in a factual, objective, and specific manner without making assumptions or judgments

Challenge: express your concern or expectation about the situation or behavior while being clear, honest, and respectful without blaming or criticizing

Choices: suggestions or alternatives for improvement or change that should be supportive and collaborative

Consequences: describe the potential outcomes or impacts of the situation or behavior - both positive and negative - that should be realistic, constructive, and motivational without threatening or exaggerating

A Perspective Regarding the Utility of the Feedback Sandwich Method

- **The utility of the sandwich method should be based upon context (the person, issue, and relationship all factor into the equation)**
- It should be a balanced approach taking into consideration the totality of the particular person, specific conduct/behavior, and strength of the relationship between the supervisor and subordinate
- May be of benefit with new employees, however experienced officers may see it as manipulation

Dr. David Wilkinson, (2022)

3.) Developmental Feedback

- Is more collaborative by nature and focuses on exploring opportunities that will help an individual realize their potential
- It allows an individual to explore opportunities and develop new skills and competencies
- It involves a conversation between a person who sees potential in a person and that person's willingness to explore a developmental opportunity

- Designed to help an individual achieve their potential
- These conversations are collaborative and focus on the best interests of the individuals involved
- The feedback is viewed as an opportunity, instead of a threat, and the decision is left up to the individual receiving it
- It encourages continuous improvement, learning, and individual growth
- **Developmental feedback is future focused**
- **Goal is the continuing growth and development of the employee**

Future Focused Feedback

Gnepp, Klayman, Williamson, & Barlas, (2020)

- Feedback that focuses on next steps and future actions, becomes more accepted and promotes more intention by the employee to follow
- When feedback is perceived to be highly future focused, feedback recipients respond as well to predominantly negative feedback as to predominantly positive feedback
- Performance may be managed most successfully by collaborating with the feedback recipient to generate next steps, to develop opportunities for interesting and worthwhile endeavors, and to enlarge the vision of what the recipient could accomplish

Managerial feedback related to the change process

Psychogios, et al. (2018)

- The process of change is considered as opening the gate for engagement into feedback
- Providing feedback can impact the change process, since it can be seen as enhancing skills, understanding the necessity for change, enriching its scope and reducing resistance
- **Three key dimensions:**
 - *Informal feedback*
 - *Benefits-oriented feedback*
 - *Confidence-oriented feedback*

When managers provide daily feedback (versus annual feedback), their employees are:

Wigert & Harter, (2017)

- 6.0 times more likely to strongly agree that they receive meaningful feedback
- 3.6 times more likely to strongly agree that they are motivated to do outstanding work
- 3.0 times more likely to be engaged at work

Three key principles that define effective feedback conversations:

- Frequent
- Focused
- Future-oriented

The Foundation

- Taken together, these three categories of feedback used together provide the basic ingredients for a feedback-rich environment.
- When feedback is occurring on a regular daily basis between supervisors and employees in the spirit of correction and support
- The annual performance appraisal will never come as a surprise because daily feedback ensures that supervisors and employees are in sync and always on the same page

The annual performance appraisal becomes a summary of things that have been talked about throughout the year.

What about when an employee comes to you with a problem or is emotional

Best Practice for Conflict Resolution

- 1) Aggressively (show non-verbals) Listen
- 2) Defer Judgement, evaluate and analyze the situation objectively.
- 3) Identify and clarify all the issues. (use open questions/ Socratic method)
 - a) How much do you know about the other parties' issue?
 - b) How much do they know about your issue?
 - c) Establish “*basis of knowledge*” with assumptions
- 3) Examine and assess all alternatives.
- 4) Solve the problems

Managing Conflict

[Between the parties]

Nour & Eli, (2022)

- Encourage a “self-distancing” perspective of a neutral third party who wants the best for all involved (*goal is to achieve a more objective, holistic perspective on conflict and, consequently, approach it in a more constructive manner*)
- Zero-tolerance for incivility and vilifying colleagues for their opinions is unacceptable
- Begin an open discussion, offering participants an opportunity to articulate their own perspectives without interruption

- Listeners don't agree or disagree with the speakers' views but, rather, listen without interrupting
- After everybody has had a chance to speak, managers should express gratitude to all who spoke for sharing their perspectives in a respectful way and to all who listened for affording speakers the space to do so
- Clarify any organizational information or policy overlooked that might pertain to the discussion
- Underscore the classic negotiation wisdom of focusing on all parties' interests and seeking creative solutions that make everybody better off

How to Work with Someone Who Isn't a Team Player

O'Hara, C. (2017)

- **Don't jump to conclusions** (or make assumptions regarding the cause or source of their behavior)
- **Start a dialogue** (questions, rather than accusations)
- **Invite them in** (More interactions will promote better relations)
- **Revisit the team's mission** (Use this opportunity to have a conversation about what the shared vision should be and the best methods for getting there)

- **Clarify roles and responsibilities** (eliminate ambiguity or confusion, and then help clarify duties and responsibilities so that they have a better understanding of what's expected of them)
- **Identify new opportunities to motivate** (provide more responsibility or an opportunity to grow their skills, help them develop and project a sense of competence, or of mastery)

Passive Aggressive Behavior

- Defined as resistance exhibited by such indirect behaviors as procrastination, forgetfulness, and purposeful inefficiency, especially in reaction to demands by authority figures
- Passive-aggressive people tend to express their negative feelings harmfully, but indirectly
- Instead of dealing with issues, they behave in ways that veil their hostility and mask their discontent

Managing Passive Aggressive Employees

- Must deal with the employee
- Focus upon the context of the situation that relates to specific work-related issues
- Identify the specific behavior and explain how it affects the employee and the mission of the organization (**12 step philosophy**)
- Focus upon creating a relationship that encourages open communication and promotes specific issue feedback
- Ensure they understand their roles and responsibilities
- Set expectations and consequences

The Feedback plan starts with the Leader

THE BASE

- *Developing and sustaining the trust, relationship and the competency foundation*
- *Creating and sustaining the feedback rich environment*

THE STEPS

- How you develop your information in a **DESCRIPTIVE** manner that is the basis for your feedback
- How you describe the **SPECIFIC** behaviors
- How you process and interpret
- How you **OBJECTIVELY** evaluate and judge the issues

Have your ducks in a row...

The Essential Elements of Information **EEl's**

Develop your theme and identify your EEl's as to the specific behavior and conduct involved in the issues.

- Theme is the main idea and underlying meaning you want to get across
- EEl's are the content of the theme, specific and accurate points designed to work in concert together to draw a logical conclusion toward the message you are trying to sell

REMEMBER: 1). Specificity in the content for credibility in the context. 2). Be candid, authentic, and kind

12 Steps in Corrective Feedback

Adapted from Lizzio, et al. (2003) and Atwater & Waldman, (2013)
Moore & Guardia, (2017), Choi, Johnson, Moon, & Oah,(2018), Levine,
Roberts & Cohen, (2020)

- 1) Initial contact and ensure you protect their self-esteem **(Give specific examples of something to secure self-esteem, them about and its meaning to the agency, or a positive benefit to them that will develop them)**
- 2) Share the responsibility with the problem **(we have a problem)**
- 3) Define the problem issues **(Describe the specific observable behavior captured in your EEI's)**
- 4) Encourage them to talk **(Give them voice and let them ask questions)**

- 5) Aggressive non-verbal attention and listening
(Clear your mind of other thoughts, filters, and distractions and attempt to understand “Objectively” what is being said)
- 6) Ask probing “un-accusatory” questions (for specific clarification in issues)
- 7) Focus on the behavior (NOT THE PERSON)
- 8) Identify, define and agree upon problems
(Capture the issues and in specific terms “EEI’s” described how the behavior adversely impacts the organization/employee)

9) Solicit their solutions **(Give them an opportunity to outline how to fix things)**

10) Have them assist in expectations development **(consider their path to common goals)**

11) Agree on expectations and outline why they are important to the agency and to them **(Lock them into their plan to meet your goals)**

12) Assign a follow up meeting **(Put the responsibility on THEIR shoulders...NOT YOURS, project positive expectations)** end as an optimist

Communication Through Documentation

Adams, (2015)

- Business writing is about clarity and persuasion
 - The main technique is keeping things simple.
Simple writing is persuasive
 - Simple means getting rid of extra words
 - Write short sentences
 - Avoid putting multiple thoughts in one sentence
 - Be descriptive and specific
 - Support conclusions with facts and circumstances
- [Proofread for proper grammar, accurate spelling and do not use slang terms or police jargon]**

THE NEW COMMUNICATION MEDIUMS

- Smart phones and the web have a profound impact on our profession and the world
- Social Media is real time, but not real accurate
- What is put out creates a duty to correct
- More often than not, you can't put the Genie back in the bottle
- Social Media's influence on the Earned Media
- Ideology and polarization
- **THE ONE PERSPECTIVE OF VIDEO** (Importance of CONTEXT)

**People need to feel they are important
and what they say, write, or do is
valuable to you/organization...**

*21st century technologies can undermine
this situation...*

*Take advantage of the utility of the technologies, **but**
depend upon personal contact, evaluation and analysis in
a human relational context*

**STRIVE TO DRIVE YOUR COMMUNICATIONS AS A
“RELATIONAL ENGINEER.”**

Cell Phones and E-mail Communications

- Incoming cell calls should never divert attention from interpersonal scenarios
- Put the phone away at the desk or table and be present
- E-mails should not be “lighting bolts” or “flaming arrows” with unreasonable suspense times unless they are required or because of their origin are compelled to be.
- Don’t rely totally on e-mail in an office. People require personal attention and opportunities to offer feedback.
- You can’t see non-verbal behaviors through E-mail
- E-mail is great for broad information updates and providing details and facts regarding operations to everyone

E-mails are 21st century cock roaches. They can go everywhere and anywhere absent any control with one click “forward”

The E in E-mail stands for “Evidence”

The Supervisors Communications Checklist

Rabin, (1988)

1. Do I assume that if an idea is clear to me, it will be clear to the receiver?
2. Do I make it comfortable for others to tell me what's really on their mind—or do I encourage them to tell me only what I like to hear?
3. Do I check my understanding of what another person has told me before I Reply?
4. Am I tolerant of other people's feelings, realizing that their feelings, which may be different from mine, affect their communication?
5. Do I really try to listen from the sender's point of view before evaluating the message from my point of view?

6. Do I make a conscious effort to build feedback possibility into all communication, since even at its best communication is an imperfect process?
7. Have I communicated the “why” of this communication so that the communication makes sense to the receiver?
8. Have I made an effort to relate this information or communication so that the receiver sees how it relates to himself, his job, or his organization?
9. Do I understand that people do not misunderstand because of perversity or contrariness directed to me, but because they are human beings?
10. Do I really understand that the first barrier any communication has to bore through is “Why should I read, or listen to, this communication?”

Burden of Management

Leaders must think strategically

Aaron K. Olson (2015)

Strategic thinking makes leaders more effective because of the focus on what's going on within their organization

- **Recognizes patterns:** dives into data, gathers information from feedback
- **Makes choices:** structured decision-making processes
- **Manages risk:** knowing that any choice is a trade off, the ability to maximize value, while mitigating risk

Execution of responsibilities require a integration and process of coordinated and functioning interactions between:

- **Strategy** (seeing, identifying, developing, planning, mission, goals and objectives)
- **People** (character, competency and confidence)
- **Operations** (proper practice within the context of the environmental and circumstantial reality that achieves the best result)

Cornerstones of Management

- Careful planning and preparation
- Capacity building for empowerment
- Casting vision
 - Clear expectations and standards
 - Defining and roles and responsibilities
- Maintaining effective and on-going communication (feedback loops)
- Accountability

Characteristics of a high-performing team

Oxford-Review, (2024)

Previous studies have found a series of characteristics that many high-performance teams display, including:

- **Clear goals and shared vision** - team members have a unified understanding of their objectives and are committed to achieving them together
- **Trust and psychological safety** - team members feel safe to speak up, take risks and admit mistakes without fear of negative consequences
- **Effective communication** - team members openly share information, ideas and concerns and actively listen to each other.

- **Complementary skills and diversity** - the team has the right mix of technical and interpersonal skills, as well as diversity of thought and background, to tackle complex challenges
- **Strong relationships and cohesion** - team members genuinely care about each other, support one another and enjoy working together
- **Adaptability and resilience** - the team is able to quickly adapt to changes, learn from setbacks and maintain high performance under pressure.
- **Continuous learning and improvement** - the team regularly reflects on its performance, seeks feedback and strives to get better over time.

Three Main Processes in Management

Adapted From Organizational behavior: Managing people and organizations
Griffin, Phillips & Gully, (2016).

- Individual processes
- Interpersonal processes
- Organizational processes

Three Main Processes

Individual Processes

- Values
- Ethics
- Work Ethic
- Growth mindset
- Acumen
- Information processing
- Decision Making

Interpersonal Processes

- Leadership
- Communication
- Relationships
- Psychological Safety (feedback)
- Teamwork
- Politics
- Conflict and Negotiation

Organizational Processes

- Designs
- Structure
- Functions
- Systems and Processes
- Culture
- Change
- Accountability

Leaders and managers are inextricably connected, one of them should not be given greater attention at the expense of the other

- In their own spheres, what are the key leadership concepts need to be understood and practiced by managers?
- Jointly, how should they be connected and balanced?
- In brief, are we training people to manage, or are we facilitating the development of people who have successfully integrated the capabilities and skills to both lead and manage?

Hall, M.L., Meyer, K.C., and Chapham, M.M. (2023)

Three Important Trends

Dr. Peter Drucker

- Leadership will become increasingly more simulative and collaborative rather than directive
- The concern will be with the relationship of the leader in their respective organizational environment
- Bureaucracies will be profoundly affected by contemporary turbulence and must adapt to become effective

Henry Mintzberg says, “Management is neither a science nor a profession. It's a practice. And the practice fundamentally doesn't change. What changes is the content [and context]* of what you're dealing with.”

The Big Three Leadership and Management Maxims

Maxwell, (2020)

- The secret of your success is determined by your daily agenda
- If we handle today correctly, tomorrow will take care of itself
- We can either “prepare or repair”

Hard things shouldn't bother you; they should challenge you

John Maxwell

- Don't go to next level---Grow to the next level.
- Don't go through hard things---Grow through hard things.

It prepares you character wise to deal with harder things

- When leaders are unhappy with difficulty and frustrated with problems
- They never really have learned to grow through them and understand the value they have to you

Subordinates Require Your Engagement

They need...

- Direction, vision, and ongoing feedback
- Understand your expectations
- Purpose and meaning with passion for the job and position
- Ownership
- Competence, confidence, and character
- Adaptability and resilience
- Fairness and accountability
- Performance and accountability
- Appreciation

Managing is a Relational, Reflexive and Ethical Activity.

Cutcliffe, A. (2009, 2014)

- **The basic practical-moral problem in life is not what to do, but what kind of person to be.**

Shotter and Cunliffe, (2002: 2020)

- It is not just something one does
- It is more crucially who one is and how we relate to others
- **If we know who to be, then what to do falls into place**
- Unsettling our assumptions, actions and their impact and, from a broader perspective, what passes as good leadership and management practice

Differences of trait and talent are like blood types:

They cut across the superficial variations of race, sex, and age and capture each person's uniqueness.

Buckingham, M.(2005)

- They discover what is unique about each person and then capitalize on it
- **Average managers play checkers, while great managers play chess**
- You need to plan and coordinate their movements, certainly, but they all move at the same pace, on parallel paths
- In chess, each type of piece moves in a different way, and you can't play if you don't know how each piece moves.

- More important, you won't win if you don't think carefully about how you move the pieces
- Great leaders and managers know and value the unique abilities and even the eccentricities of their employees, and they learn how best to integrate them into a coordinated plan of attack
- **Leaders succeed when they can cut through differences of race, sex, age, nationality, and personality and, using stories and celebrating heroes, tap into those very few needs we all share**

- The job of a manager is to turn one person's particular talent into performance
- **Managers will succeed only when they can identify and deploy the differences among people, challenging each employee to excel in his or her own way**
- What are his or her strengths
- What are the triggers that activate those strengths
- What is her or his learning style [and interest]

A REALISTIC MANAGEMENT PERSPECTIVE

- Command Staffs and Commanders will often interpret what you “need” with what you “want” differently
- Often, Command Staff view the issue from a more global perspective, while Commanders are more specific to their situation (Battlefield vs. Theater)
- Only in rare situations will the commander have the benefit of all the resources he or she wants to accomplish the mission
- The operational realities of Command require extraordinary leadership up and down and sideways in the organization
- More often than not, commanders are expected to do more with less.” **(This is a reality everywhere in our craft)** Learn to do the absolute very best you can with what you’ve got.”

A new 2025 study has looked at the intricacies of leading and managing organizations using hybrid working practices (remote and onsite).

Schwehn, T.-J., Meier, F. J., & Laumer, S. (2025).

■ Examining the idea of hybrid leadership, the study found that:

- There are four core tensions faced by hybrid leaders in organizations:
 - a. Leader's experience tension between embracing change and maintaining normality.
 - b. Digital tools simultaneously enable and inhibit effective leadership.
 - c. Trust dynamics become both stronger and more vulnerable in hybrid settings.
 - d. Spatial management creates new coordination challenges

Leaders tend to respond to hybrid working by:

- Defaulting to traditional approaches during uncertainty.
- Postponing complex interactions for face-to-face settings.
- Adopting binary, rather than integrated, solutions.
- Using inconsistent approaches to remote management

This means that:

- Traditional leadership frameworks prove insufficient.
- Trust requires active, intentional management.
- Technology adoption demands careful balance.
- Employee experience varies significantly based on individual circumstances.

This research shows there needs to be a transition away from viewing hybrid working as merely a flexible working arrangement and towards recognizing it as a fundamental transformation of leadership practice.

Why does this matter?

- This research provides evidence-based insights into how organizations might transform their leadership development approaches to address emerging hybrid workplace challenges, particularly critical as hybrid working becomes the dominant mode of operation for knowledge-intensive industries.

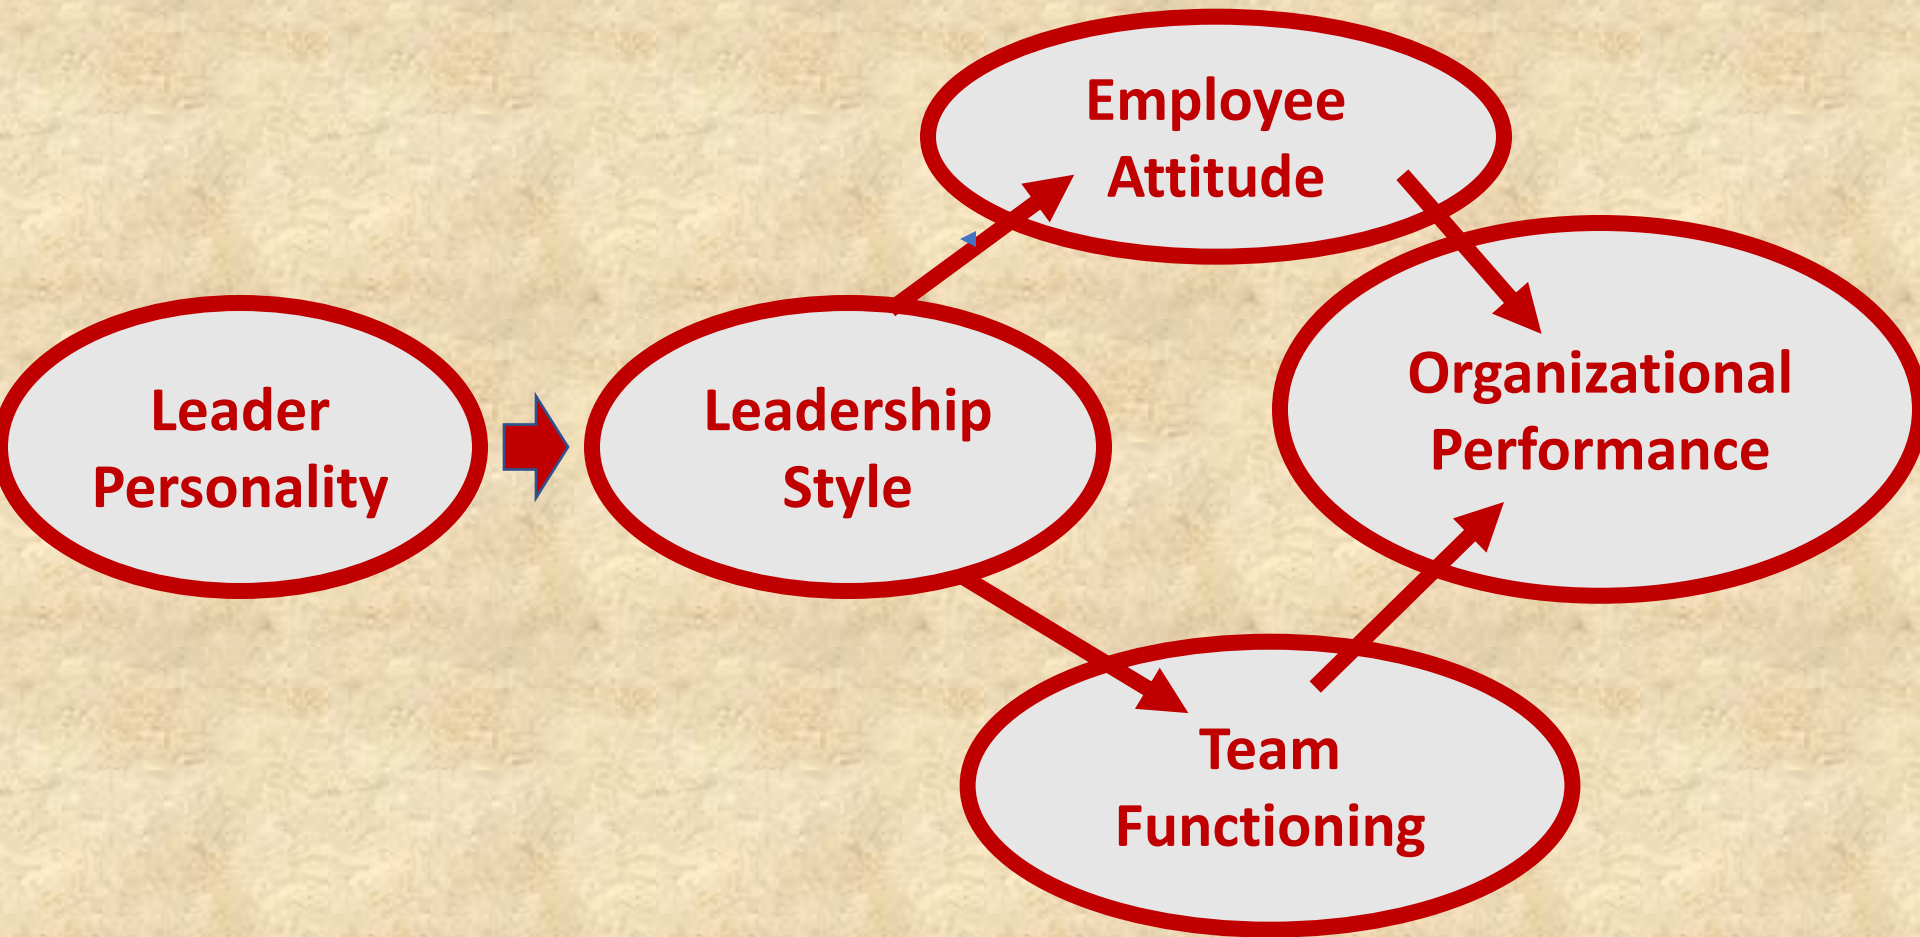

Adaptive Leadership Strategies for Hybrid Workforces:

Cahyono, N. D. (2025)

- Leaders who are able to adapt to change and show flexibility in decision-making are key factors in increasing productivity and workforce satisfaction.
- In addition, adaptive leadership plays a role in strengthening interpersonal relationships, creating an inclusive work culture, and supporting sustainable innovation.
- The study also underscores the importance of effective technology and communication integration as a key element in managing a hybrid workforce.

How leader personality affects organizational performance.

Hogan and Kaiser, (2005)

Two leadership Orientations

Ohio State Studies 50's

Worker-centered leadership: *a socioemotional orientation...*

- Concern for morale and relationships among members.
- Expresses consideration for followers' feelings, opinions and ideas, and tries to maintain an amiable working environment.
- Nurtures genial relationships between workers.
- Fosters the growth of trust between the leader and the followers.

Task-centered leadership: Organizing work relationships and clearly defining the leader's and subordinates' roles. The emphasis is upon establishing good communication and effective ways of completing tasks:

- Having subordinates following rules and procedures
- Created structure in any task-related behaviors involved in the initiation of action
- The organization and assignment of duties, and the determination of clear-cut standards of performance.

Cornerstone Theory in Leadership

Three (3) Perspectives into one (1) blend

- **Authoritarian** (Autocratic)
- **Participative** (Democratic)
- **Delegative** (Laissez-Faire/Free rein)

AND how we apply them within the particular context, situations, or circumstances

- **Situational Leadership** (Followers and Context)

Three major types of leadership theory

- **Transactional leadership** depends on the administration of rewards by a leader to influence a follower (Authoritarian/Autocratic)
- **Transformational leadership** entails inspiration, and the transformation of a follower's motivational state (Participative/Democratic OR Délégative/Laissez-Faire or Free rein)
- **Contingency or situational leadership** deal with the notion that different circumstances call for different types of leadership (situation/context/task/subordinate confidence, willingness, and readiness, or maturity level)

Effective leadership requires both transactional power and transformational influence OR sometimes a blend

Transactional Leadership Style

- Transactional leadership involves exchanges between leaders and followers designed to provide benefits to both
- Leaders influence followers through contingent rewards and negative feedback or corrective coaching

The Transactional Leader

- One who rewards or disciplines based upon the subordinate's performance
- The transactional leader places emphasis upon direction and task results, work requirements and standards, and subordinate compliance and performance.
- Transactional leaders believe in rewards and punishments as a means to influence subordinate's conduct, behavior, and performance within the job.
- Management by exception is often used

Management by exception

Falls into 3 categories with 2 types

- 1.) Autocratic (Directive), 2.) maintaining the status quo and
3.) overregulation

Active

Leader watches and follows closely, then makes corrective actions for

- ❖ Mistakes
- ❖ Errors
- ❖ Job Performance

Passive

Leader intervenes only after standards have not been met or problems arisen

Transformational Leadership

Bass, Avolio, and Colleagues

- **Idealized influence**, refers both to the characteristics that followers attribute to the leader, as well as behavior the leader engages in related to being a role model and doing the right thing. A leader with strong values
- **Inspirational motivation**, relates to broadly communicating a positive vision and holding high expectations
- **Intellectual stimulation**, involves being open to new ways of accomplishing tasks and encouraging others to be creative in their thinking.
- **Individual consideration**, focuses on a leader who treats employees as individuals, spends time coaching and developing their skills, cares, and is compassionate

Transformational Leaders

- Employ idealized influence, inspirational motivation, intellectual stimulation, and individualized consideration
- The transformational leader exhibits each of these four components to varying degrees in order to **empower** and bring about desired organizational outcomes through their followers
- Transformational leaders share a vision, inspire followers, delegate, mentor, coach, respect individuals, foster creativity, and act with integrity

Transformational Focus

- Transformational leadership is where a leader works with people across the organization and with external stakeholders to help identify what change is needed
- Creates a vision to guide change and develop commitment to the organization, its values and any changes needed
- It is more of a facilitative style of leadership that aims to build trust, involvement and commitment to the aims of the organization

**Transactional
Behaviors**

**Contingent
Reward**

**Passive or Active
Management by
Exception**

**Expected Effort and
Expected Performance**

**Transformational
Behaviors**

**Idealized
Influence**

**Inspirational
Motivation**

**Intellectual

**Individual
Consideration**

**Increased Motivation ,
Effort, and Performance
Beyond Expectations**

The Relationship Spectrum

Transactional

- One party decides
- One party provides resource
- Inflexible expectations or contract decided at the beginning
- Limited interest or buy-in by followers
- Transparency not necessary
- Risk and reward individually mitigated
- Relationship must fulfill obligation/equity not needed

Transformational

- Participative decision
- Followers bring a range of resources and competencies
- On-going discussions and adaptation to changing events
- Purpose and buy-in by followers
- Transparency is essential
- Risk and reward shared
- Equity is core to vision

Perspective on Safety and Compliance

Transformational

- Promotes autonomy
- Promotes fluid change
- Difficult to establish routine
- Hard to maintain the status quo
- Inspires employees to “go the extra mile”

Transactional

- Does not promote autonomy
- Difficult at adapting to change
- Better at creating or maintaining routine
- Preserving the status quo
- Worse at inspiring creativity

Police Culture and Transformational Leadership: Outlining the Contours of a Troubled Relationship

Cockcroft, T. (2014)

- Must consider the complexities of the cultural terrain of police organizations
- The operational context of much of police work can be considered largely “transactional” as opposed to “transformational”
- The issues with lower level police discretion
- The fundamental differences in the role and values between the private and public sector

Police Culture and Transformational Leadership: Outlining the Contours of a Troubled Relationship

Cockcroft, T. (2014)

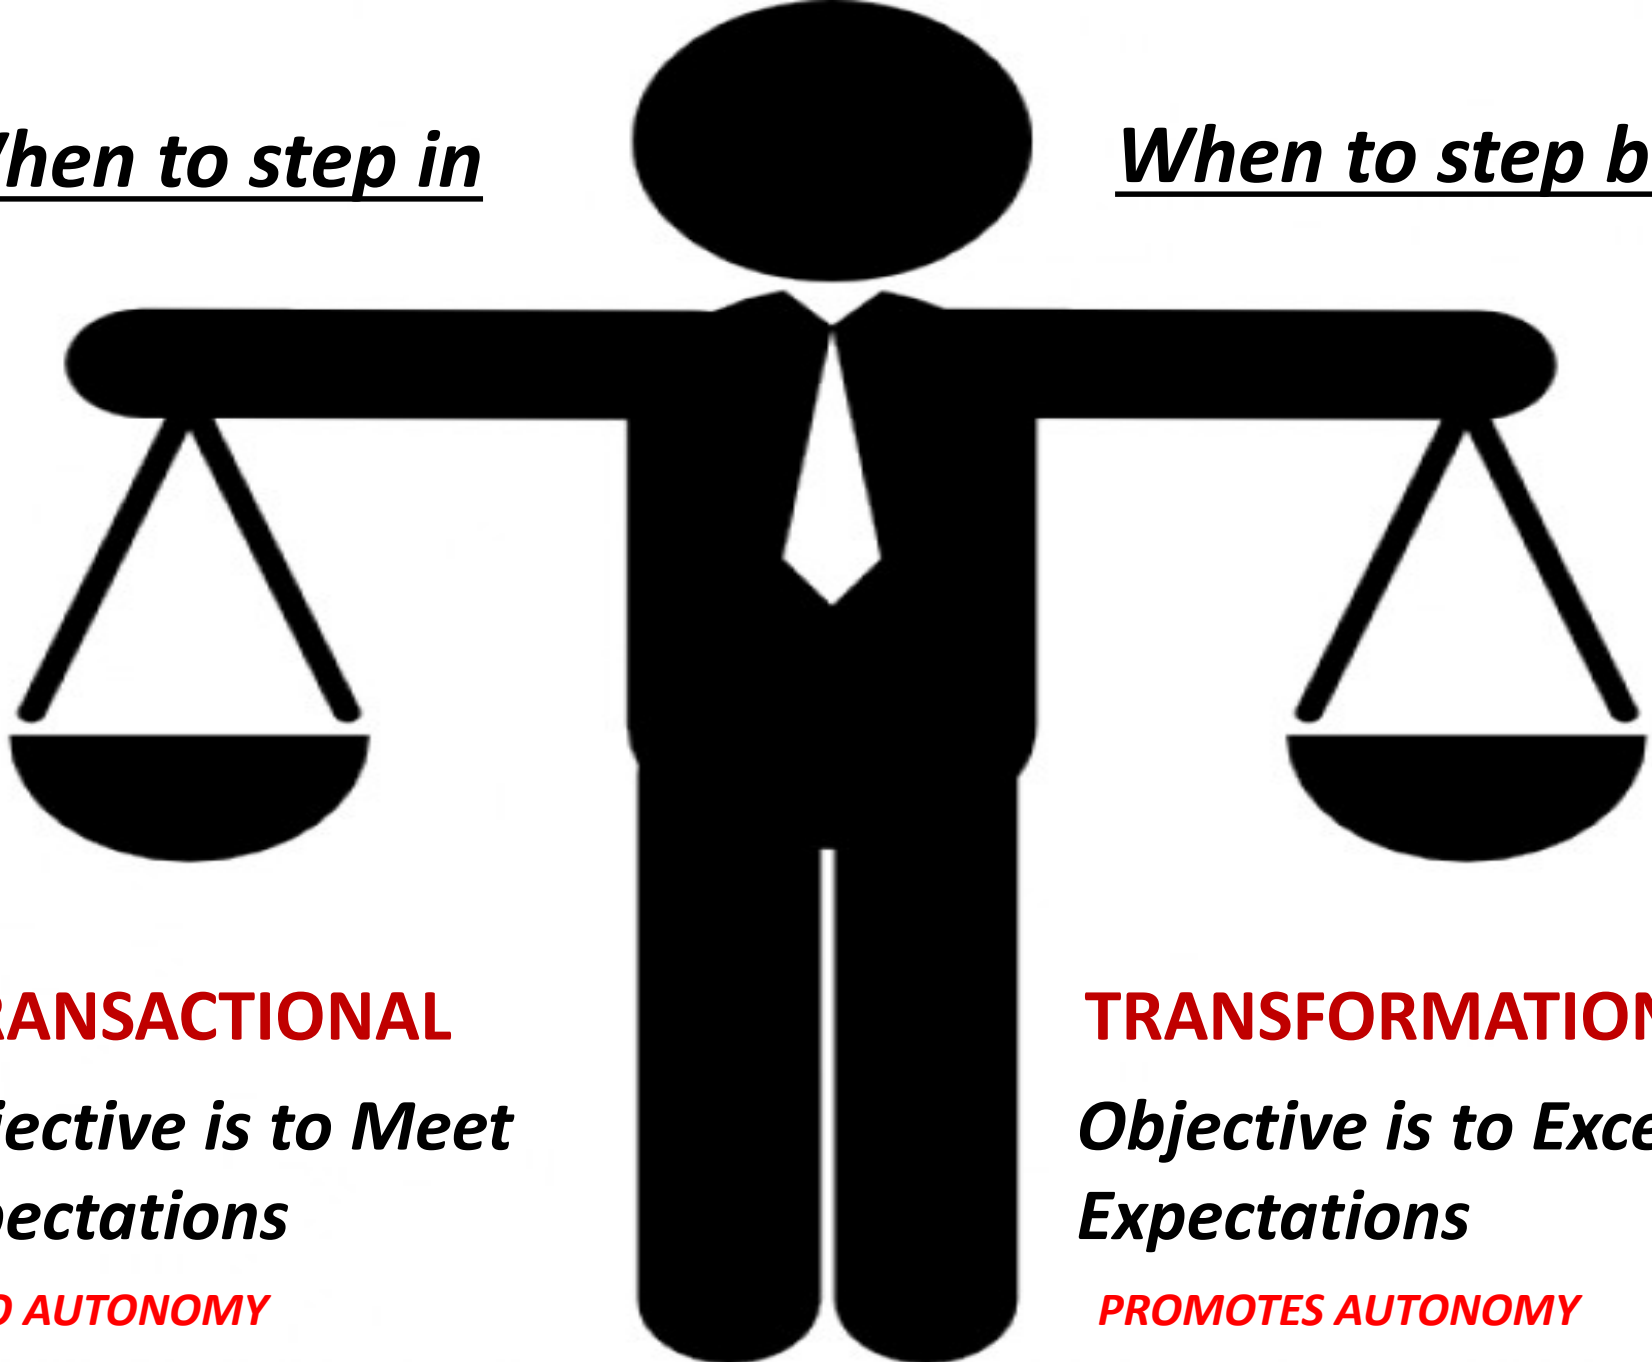

- **Models that synthesize transformational and transactional styles might be a way of overcoming criticisms founded upon both the simplicity of two-fold classifications and the need for clarification of the relationship between the two models**
- Policing covers a wide range of roles within an increasingly complex organizational environment
- It is unlikely that one form of leadership will be appropriate for every set of organizational relationships

In Summary

- Transformational leaders explore new forms of learning and highlight unstable environments
- Transactional leaders strengthen and improve an existing practices and are excellent in stable environments.

When to step in

When to step back

TRANSACTIONAL

*Objective is to Meet
Expectations*

NO AUTONOMY

TRANSFORMATIONAL

*Objective is to Exceed
Expectations*

PROMOTES AUTONOMY

Situational

- Situational leadership emphasized leadership behaviors along a continuum between task-orientation in relation-orientation
- Situational leadership also emphasized the level of maturity, or readiness of the followers as a contingency or context that leaders need to account for in order to establish the correct fit between the leader and follower

Hersey-Blanchard Situational Leadership Theory

- The theory states that instead of using just one style, successful leaders should change their leadership styles based on the maturity or development stages of the people they're leading (**Their readiness**) and the details of the task.
- Using this theory, leaders should be able to place more or less emphasis on the task, and more or less emphasis on the relationships with the people they're leading, depending on what's needed to get the job done successfully.

- Under situational leadership, the leader's function is to determine the level of a follower's task and psychological maturity
- Once the leader determines a follower's overall level of maturity, readiness or developmental stage, the leader should adjust their behavior in a way that most effectively manages the follower's behavior in light of the follower's maturity
- **More mature employees require less direction and support**
- **While employees with less maturity require more direction and support**

Situational Leadership Model

Leadership Styles

Hersey and Blanchard

- **Directing (S1)** – The leader provides specific direction, explains processes and decisions and closely monitors task accomplishment
- **Coaching (S2)** – Continues to direct and closely monitor, solicits understanding, suggestions and supports individual processes
- **Supporting (S3)** – Facilitates and supports, shares decision making responsibility
- **Delegating (S4)** – Leaders pass responsibility and authority to make decisions onto the follower or group. Leader provides oversight

Follower Maturity or Development Levels

For Hersey and Blanchard the key issue in making these adjustments:

- Is follower maturity, as indicated by their readiness to perform in a given situation.
- **Development or Readiness, in this sense, is largely based on two major factors – follower ability and follower confidence and commitment.**

Maturity or Development Levels

- **D1** – People at this level of maturity are at the bottom level of the scale. They lack the knowledge, skills, or confidence to work on their own, and they often need to be monitored or pushed to take the task on.
- **D2** – at this level, followers might be willing to work on the task, but they still don't have the skills to complete it successfully.
- **D3** – Here, followers are ready and willing to help with the task. They have more skills than the D2 group, but they're still lack confidence or motivation in their abilities.
- **D4** – These followers are able to work on their own. They have high confidence and strong skills, and they're committed to the task.

The Research

- The transformational, authentic and servant leadership styles are positively correlated with team motivation
- Whereas transactional leadership style is found to be negatively correlated
- These theories define the importance of dove tailing the burdens of self-awareness, competence, servant-hood and communication into the burden of management to ensure you understand and apply the styles required based on the person and task
- **Transformational** (Most preferred when appropriate)
- **Transactional** (When required and necessary) **OR A combination of both within the context of the situation and circumstances afoot.**

Model the Way

- Clarify Values
- Set the Example

Inspire a Shared Vision

- Envision the Future
- Enlist Others

Challenge the Process

- Search for Opportunities
- Experiment and Take Risks

Enable Others to Act

- Foster Collaboration
- Strengthen Others

Encourage the Heart

- Recognize Contributions
- Celebrate the Values and Victories

Four Essential Skill Sets for Leaders

Brown, B. (2018)

- **Rumbling with vulnerability:** to better face and embrace uncertainty
- **Living according to your values:** and aligning your actions with your core beliefs
- **Braving trust:** so, you can establish and maintain connections through your behaviors
- **Learning to rise:** and be resilient by reckoning with emotions, rumbling with stories, and rewriting narratives to learn from and grow from failures

The Seven Pillars of “BRAVING” Trust that Shape Exceptional Leaders

- **Boundaries:** Define and respect clear personal and professional boundaries to establish a sense of safety and reliability
- **Reliability:** Deliver on your commitments and expectations consistently to demonstrate accountability and dependability
- **Accountability:** Take responsibility for your mistakes and make amends when appropriate to contribute to transparent and trusting relationships

- **Vault (Keeping Confidences):** Refrain from sharing information or experiences told to you in confidence so your team members know that any information shared is always confidential
- **Integrity:** Act genuinely, honestly, and morally to strengthen trust, demonstrate ethical behavior, and remain true to your authentic self
- **Non-judgment:** Create an environment of non-judgment where individuals can feel accepted and understood without fearing criticism
- **Generosity:** Engage in acts of kindness and genuine concern for the well-being, happiness, and success of others to build a foundation of trust

Delegation is Necessary for the Professional growth and development of your people

- Fosters self-esteem
- Promotes decision making
- Builds confidence
- Develops critical thinking skills
- Creates autonomy
- Promotes responsibility and performance through **“Ownership”**

The Importance of Ownership

Wheatley, (2006)

- People support what they create
- Ownership describes personal commitment to the organization
- Emotional investment of employees in their work inspire them to contribute
- The best way to create psychological ownership is to have those responsible for implementation to develop the plan for themselves
- The participation process makes the plans come alive as a personal reality

Managing People (Key is Delegation)

FIRST ENSURE THEY HAVE THE CAPACITY

- Delegate the entire task
- Set clear goals and expectations
- Provide context, resources, and support
- Delegate responsibility and authority
- Provide oversight and mentorship
- Evaluate, provide feedback (Praise and developmental) and recognize performance
- Ensure accountability

The Incorporation of Discretionary Thinking into Delegation

- Operating within the proper context
- Articulating the specificity of the facts known at the time
- Domain experience
- Requires consequence thinking
- Knowing when to call for advise

When you delegate to a supervisor...

“DELEGATE”

- **Trust your supervisor**
- Delegate responsibility and authority, not just the task
- Provide context and how such relates to other work being performed by the work unit and how such affects the agencies mission... **Remind them of the common goal toward their “Professional Growth and Development.”**

- Provide clear expectations that are both motivating and realistic
- **Communicate any special concerns or contingency plans**
- Provide a means for your contact (if they need you) and additional resources if needed
- Do not bother or call them back and check with them...let them run things, **LEAVE THEM ALONE AND LET THEM WORK**
- De-brief and evaluate when you return
- Provide feedback (**Ensure you start with praise**) then developmental feedback

The Right Way to Hold People Accountable

By: Peter Bregman

Harvard Business Review

JANUARY 11, 2016

1. Provide Clear unambiguous Expectations
2. Ensure they have the Capabilities to accomplish the task
3. Ensure Objective and Accurate Evaluations on progress (Oversight)
4. Provide “specific” and “clear” Feedback
5. Clear consequences

These five work together as a system to ensure the ability to hold people accountable

Standards

We Measure

- Policy & Procedures
- Structures, functions and processes
- Conduct and behavior
- Oversight

Performance

- Resources applied
- Goals and objectives
- Efficiency and effectiveness
- Results

Proactive Management

Understand the Nexus between Accountability and Responsibility

ACCOUNTABILITY	RESPONSIBILITY
The duty to ensure a task is completed	The obligation to complete a task
Assigned to just one person	Can be shared among a team
Results-focused	Task-focused
Cannot be delegated	Can be delegated

IN MANAGEMENT

Always be mindful of and sensitive to

- **The bell** - any warning bells sounding
- **The book** - laws, regulations, policies, and ethics
- **The candle** - transparency “exposure to the light, public scrutiny”

TRANSPARENCY AND OVERSIGHT IS ESSENTIAL IN OUR CRAFT

Can you defend, will you feel good about, and will you continue to feel justified?

AJC TEST

It is an important part of the job for leaders to understand their ongoing responsibility to solve problems and manage polycrisis, and messes

- First, we try to prevent, mitigate, and reduce mistakes, problems, and messes by proactive management strategies
- Second, we can never eliminate risk or problems, we can only manage them
- **Finally, it is our job to deal with problems. That is what we are hired to do**

Mistakes need to be understood and learned from just cultures, Not blame cultures

PROBLEMS NEXUS TO SOLUTIONS

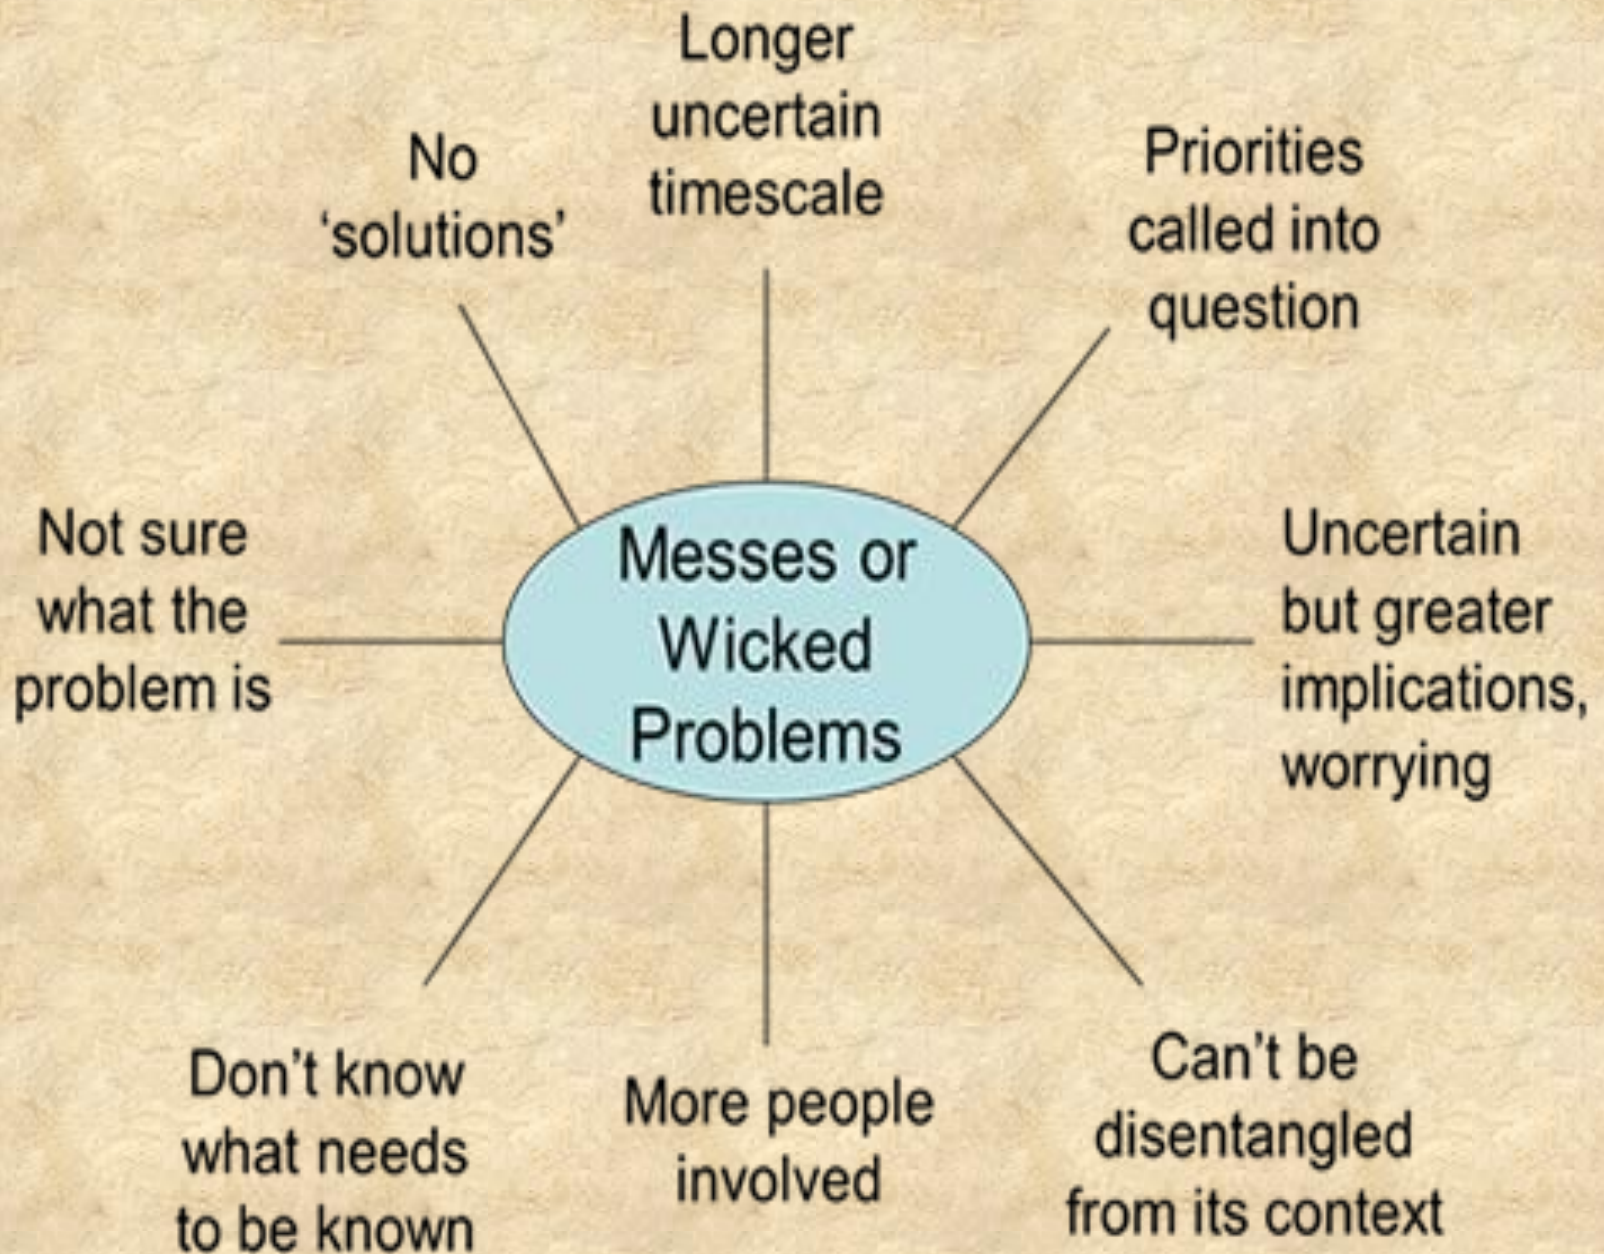

**PAULS
LAW**
Hans Paul
NASA

Polycrisis

- The simultaneous occurrence of several catastrophic events (Collins English Dictionary. Copyright © HarperCollins Publishers)
- A time of great disagreement, confusion, or suffering that is caused by many different problems happening at the same time so that they together have a very big effect (Cambridge Advanced Learner's Dictionary & Thesaurus © Cambridge University Press)
- A cluster of distinct crises that interact in ways that they and/or their effects tend to reinforce each other

Helleiner, E. (2024)

You Must Manage in a Proactive Fashion and Manner, with a Proactive Mindset

- We must continuously improve, grow, and develop
- Sustain the acumen and insight into the operational realities of our profession

The contemporary organization worst enemy is:

Complacency and the lack of Communication

The Utility of Keen Insight through Adaptive Management and Anticipatory Mindset

- Competent public safety leaders have a “keen insight” for the operational realities they face
(the ability to have) a clear, deep, and sometimes sudden understanding of a complicated problem
- Successful leaders understand the importance to practice “adaptive management” and “anticipatory mindset” before, during, and after their operations

Adaptive Management as a Strategy

- Emphasizes the need to change with the environment and to learn from doing
- Adaptive management applied to ecosystems makes overt sense when considering ever changing environmental conditions
- The flexibility and constant learning of an adaptive management approach is also a logical application for organizations seeking sustainability methodologies
- Agencies pursuing sustainability strategies would employ an adaptive management framework to ensure that the organization is prepared for the unexpected and geared for change

Adapted Management

- Grounded in a state of awareness from being in-touch, in-tune, and in-synch, with the operational realities and current environment while comprehending the influences of the complex ecosystems affected by and affecting the task force context

Public Safety operates in a complex and rapidly changing society

- **Being anticipatory** and gaining strategic advantage requires sophisticated intelligence-gathering techniques
- New models for informed decision making
- Objective ways to judge outcomes
- Public safety leaders need to identify new opportunities, avoid being blindsided by external forces, and to turn potential threats into opportunities.

Anticipatory Mindset

- The ability of leaders to foresee and adapt to changing environmental conditions
- Development of “*keen insight*” into the dynamic mix of police roles, responsibilities, culture, and operations with law, professional policy, politics, media, and the public opinion

Two Perspectives

- **Monitoring the environment and its nexus to operations:** monitoring the surrounding environment (legal, political, professional etc.) in concert with operational activity to create and communicate a process for spotting changes on the horizon
- **Proactive Planning:** Once issues are identified, the process for evaluation, analysis, and response are developed for action
 - Develops a response protocol to work with teams to assign responsibilities for damage control
 - This helps to minimize the negative impact of the change and fosters a shared sense of accountability

Anticipatory Mindset

- An Anticipatory Mindset is a systems-based approach for enabling task force managers to cope with accelerating, complex forms of change
- A disciplined foresight-policy
- Continuing engagement with staff, peers, and stakeholders
- Feedback systems to monitor and adjust
- An overall industry awareness (of the police profession)
- Asking the what ifs?
- Networked proactive management

Key Points

- An Anticipatory Mindset registers and tracks events that are just barely visible at the event-horizon
- It is a proactive self-organization to deal with the unexpected and the discontinuous
- Develops a plan to adjust rapidly to the interactions between policies and our problems
- It involves foreseeing, foreshadowing, and forecasting future events

Four reoccurring themes in contemporary leadership and management

Admiral Michael Mullen USN Retired
(Former Chairmen Joint Chiefs of Staff)

- People
- Change
- Failure
- Accountability

“The real challenge in contemporary leadership is an accurate knowledge and understanding of what is going on around you.”

Management and leadership begin with standards.

Structured management practices refer to an organization having a set of consistent policies and operational actions in order to manage the organization and employees:

- Reasonable Span of Control
- Rules of conduct
- Objective Measures of performance
- Criterion
- Professional behavior and conduct
- Training
- Oversight
- Expected results

Top 10 high liability areas

Daigle Law Group

1. Use of force and force-related weapons
2. Pursuit and emergency vehicle operations
3. Accepting citizens complaints
4. Response to the mentally ill
5. Sexual and workplace harassment
6. Care and custody of detainees
7. Tactical operations deployment
8. Response to domestic violence
9. Evidence and property control
10. Off-duty and secondary employment

Accountability Factors

Standards, supervision and discipline

- **The rule of law**
- **Human/civil rights**
- **Public service mindset**
- **Professional practice**
- **Transparency:** Policies, strategies, decision-making, resources and performance are open to public scrutiny and oversight

Root Causational Factors (RCFs) In Public Safety Failures

Gordon Graham, LEXIPOL

***When Public safety agencies get in trouble
such is linked to problems in one of these five
areas:***

- People
- Policy
- Training
- Supervision
- Discipline

Attorney Eric Daigle

- My experience has led to the conclusion that supervision is the key ingredient to ensure effective constitutional policing
- **The challenges in recruitment and retention are multiplying the risk faced by the law enforcement industry**
- Just ask yourself: Are your supervisors properly trained to handle their responsibilities?
- There were many suggestions to fix some of the supervision issues within law enforcement, but the overarching themes are simple.

It is all about Leadership, Acumen, Awareness, and Proactive Management

Professional Culture Sustained by Professional Standards, Vision, Conduct, and Oversight that Prevents:

- Negligent Hiring
- Negligent Retention
- Failure to Train
- Failure to Direct (*policy*)
- Failure to Supervise (*enforce policy and provide oversight*)
- Failure to Discipline
- Failure to Intervene/intercede

When things don't go right

Graham, G. (2020)

- **Complacency:** When high-risk tasks become routine, that's a problem lying in wait
- **Fatigue:** Many tragedies are caused by grossly fatigued leaders and their officers
- **Hubris:** Confident leaders and officers are a necessity, while cocky ones are a problem lying in wait
- **Distractions:** Leaders and their officers not focused on the task at hand
- **Risk homeostasis:** Leaders and their officers see a risky activity as being safe, and being more likely to take more chances—either consciously or unconsciously

Beware of Grey Rhinos and Black Swans

- **Grey Rhinos:** Obvious dangers we ignore, highly probable, high impact yet neglected threat: *Gray rhinos are not random surprises but occur after a series of warnings and visible evidence*
- **Black Swans:** The unknown, unforeseen event that is extremely low in probability and high in impact. *They tend to be not fully explainable until after the fact*

Same story over the years

- Rarely ever are these incidences a one-time thing
- They represent a culture of improper behavior
- Usually, there will be a history of complaints that resulted in a perfunctory investigation (a superficial inquiry, done without care or interest or merely as a form or routine)
- OR just ignored

Four main sources for management failure

- **Not being prepared:** mediocracy, turning a blind eye, not dealing with it or not seeing it...Failure to sustain a “proactive” mindset.
- **Arrogance:** close-mindedness resulting from ignorance, stupidity or ego that promotes a subjective versus objective assessment and evaluation
- **Deliberate indifference:** the conscious or reckless disregard of the consequences of one's acts or omissions.
- **Bad unit culture:** disregard for policy, procedure, training, poor supervision and oversight

Four main themes of failing Managers

- Problems with interpersonal relationships (being insensitive, arrogant, cold, aloof, overly ambitious);
- Failure to meet business objectives (betraying trust, not following through, overly ambitious, 'poor performance')
- Inability to build a team (poor staffing, unable to build a team)
- Inability to adapt to a transition (not strategic, conflict with upper management)
- **Lazy**

In the majority of adverse issues:

“It happened because it could”

In General: Poor organizational culture over good

In Specific:

- Incompetency over competency in the domain
- Ignorance over awareness
- Castle and Mote Mindset (**Ego in my little world**)
- Disengagement over engagement
- Avoidance over collaboration
- No controls over the establishment of internal controls and divisions of responsibilities
- **Reactive instead of Proactive**

Personnel Perfect Storms That Supervision Must Prevent

- **Attitude** (“that ain’t my job” mindset)
- **Carelessness** (dedication to other things other than their job)
- **Shortcutting or negligence** (from not doing at all to not doing right...assumptions to poor fact finding)
- **Apathy or Indifference** (lack of care, concern or interest)
- **Cynicism** (skepticism, suspicion, distrust in people)
- **Personnel Mutinies** (from micro-managers and/or closed employee feedback and poor morale)
- **Not holding people accountable and lack of transparency**
- **Poor oversight/ no or poor documentation**
- **Illegal, unethical or unprofessional conduct**

Task-related rule-breaking behavior.

Officers breaking laws or formal internal rules in support of performing their lawful task

Van Halderen & Kolthoff, (2017)

- Noble cause corruption is about using illegitimate means to secure or improve society's well-being
- It explicitly expresses the means-ends dilemma in policing (i.e., when a “just” end cannot be achieved by lawful means), and the manner in which police officers sometimes cope with this dilemma

Leadership, supervision and management are critical to frame the legal, moral and ethical obligations to constitutional perspectives, loyalty to oath and professional responsibility

How far from the tree does the apple fall? Field training officers, their trainees, and allegations of misconduct

Crime & Delinquency, Vol 62(6), June, 2016. pp. 821-839.

Getty, Ryan M., Worrall, John L., Morris, Robert G.,

Grounded in both organizational- and individual-level theories, this study examined the relationship between police field training officers (FTOs) and their trainees' subsequent allegations of misconduct.

Results revealed that approximately one quarter of the variation in trainees' allegations of post supervision misconduct was attributed to FTOs, suggesting the apple (trainee) indeed falls close to the tree

Unprofessional behaviors and corruption begin small and evolve

- Are analogous to erosion
- Corrosive processes are subtle, and overtime eat away at structure
- Grow and fester
- The longer left unchecked the more difficult to repair
- Become dominate
- Will destroy and devastate

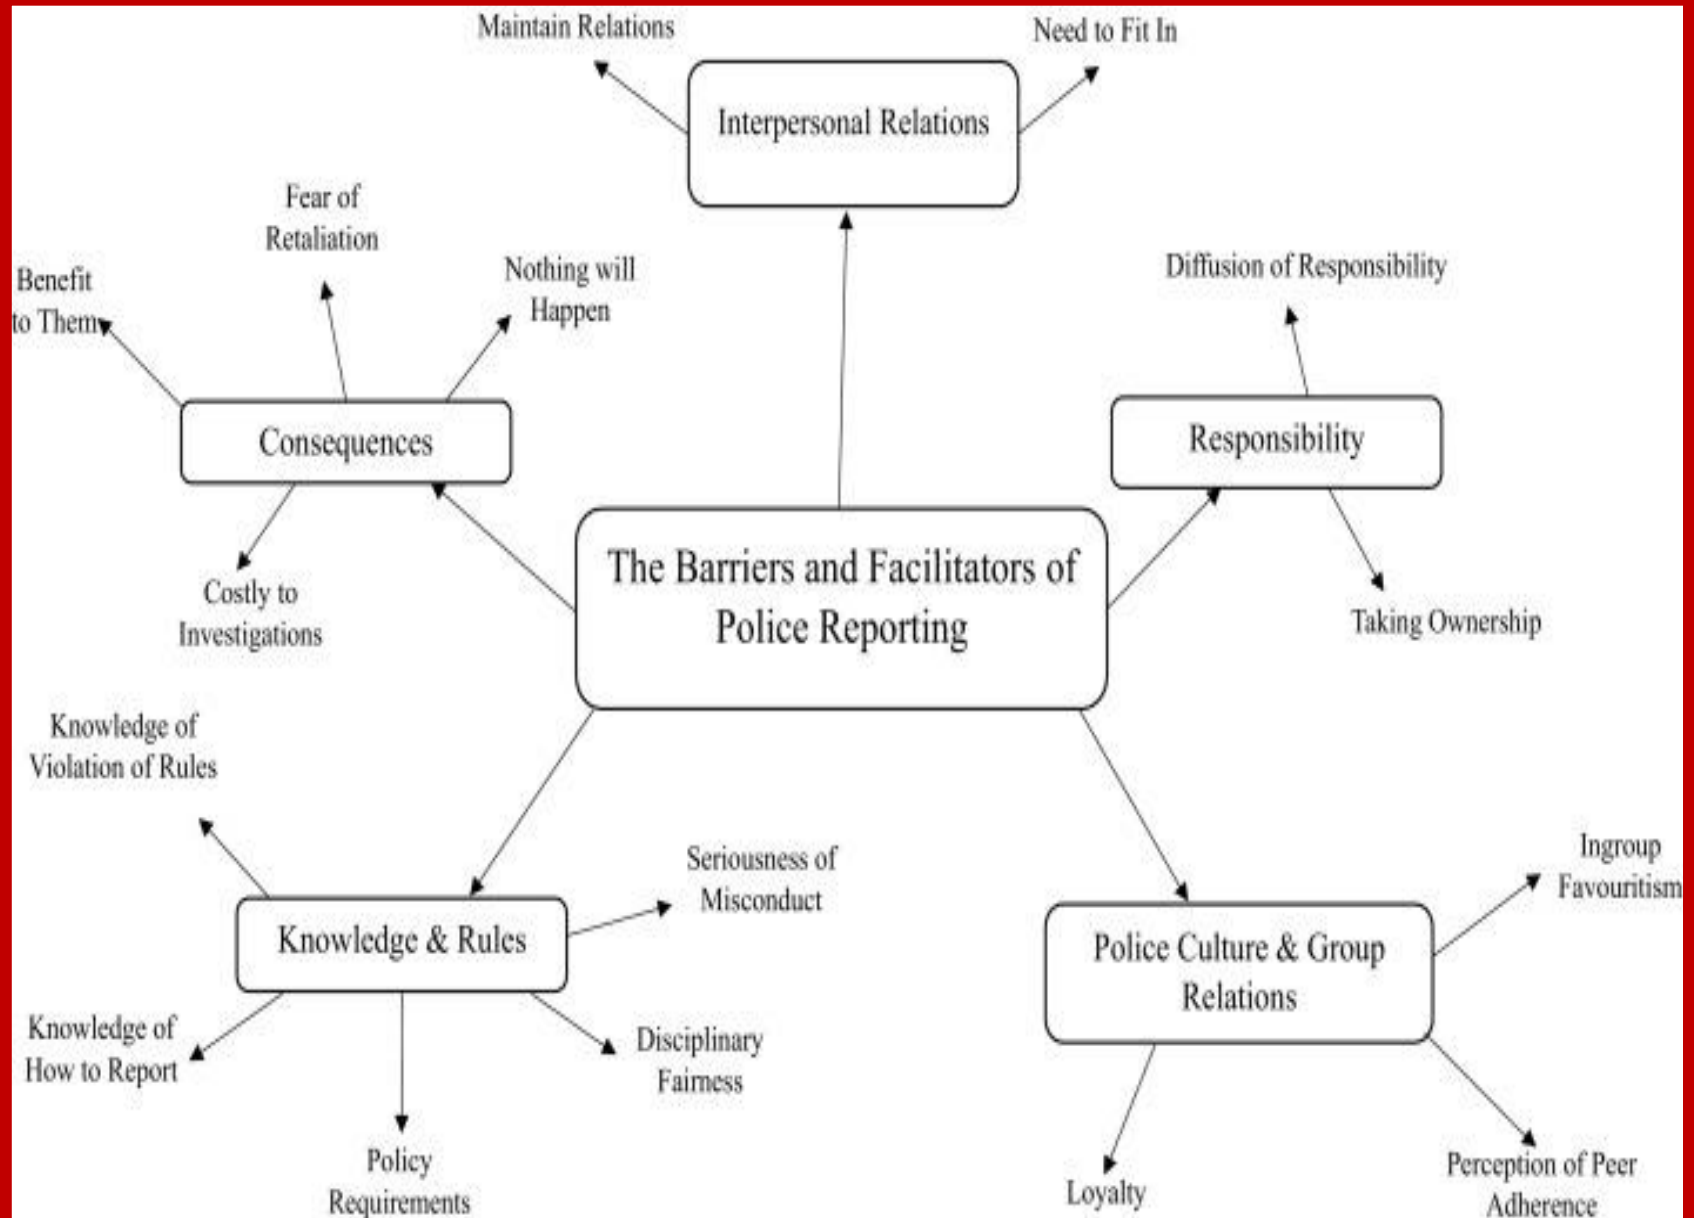

The four behaviors most frequently identified as contributing to the derailment leaders and officers

- 1) Acting without integrity
- 2) Making decisions without adequate knowledge
- 3) Failing to sufficiently consider relevant stakeholder feedback in decision-making
- 4) Disseminating problematic, untrue, or unfair content

Police whistleblowing: A systematic review of the likelihood (and the barriers and facilitators) of the willingness of police officers to report the misconduct of fellow officers.

Taylor, O. E. V., Philpot, R., Fitton, O., Walkington, Z., & Levine, M. (2024)

- **Recent high-profile cases of police misconduct have revealed that officers were often aware of misconduct, but remained silent, compromising public trust in law enforcement**
- Systematically review of 118 relevant papers of police whistleblowing' literature to identify barriers and facilitators to officers challenging misconduct

In order for a manager to expect they must inspect.

“You must keep up on your business.”

Know about peoples conduct and behavior as it relates to issues, events, incidents and potential problems.

BE A PROACTIVE MANAGER

Stay ahead of problems

For there is nothing hidden that will not be disclosed, and nothing concealed that will not be known or brought out into the open.

Luke, 8:17

Maintaining Skepticism in Oversight

Its not about trust, is about maintaining the best practice

- Exercise an appropriate level of skepticism when considering the risk
- Skepticism is an attitude that acknowledges the risk of management not doing their jobs (unintendedly or intentional)
- Skepticism requires awareness to potential risk factors and a fortitude to ask specific and difficult questions and perform inspections

- **It also requires a culture that encourages open and candid discussions among the leader and staff with enough time to think and consider “the what ifs” scenarios related to the risk of management failures in internal control**
- Set aside any beliefs about the integrity of management because many failures are often committed by “good managers gone bad,” or “making mistakes” rather than consistently dishonest people

Managers must communicate their expectations and overall mission through “preaching” vision to their people.

A key component in the vision outline is a zero tolerance for improper and/or poor conduct and/or behavior.

YOU MUST HOLD PEOPLE ACCOUNTABLE

Such shapes and molds the “Culture of the workplace”

- *Things are better when we get better.*
- *When accountability makes us better, everything else gets better.*

Redundant Vision Regarding RED LINE Standards

A Zero Tolerance for Unprofessional, Unconstitutional, or Illegal Behavior or Conduct

Critical Management of Administrative Oversight

- **Digital reviews**

- Operational realities of body cameras and officers in the field
- Policy and training

- **File reviews of reports and case files**

- Search and seizure actions
- Procedures, fact-finding, conclusions, evidence, leads etc.
- Chain of custody (evidence practices)
- Statements and admissions
- Professional documentation
- Open records post closure

- **CI Files**

- **Administrative reports**

- Maintenance, equipment, purchasing, OT, petty cash etc.

- **Evidence / property rooms**

Oversight Continued

- Monitor and regularly audit compliance for policy, procedure, practice and ethical conduct
 - Search warrant affidavits
 - Raid plans/operation plans
 - Videos from Body cams, traffic stops to investigatory acts (consents to interviews)
 - Title 3 issues
- Ensure consistent enforcement and discipline of violations
- **Respond appropriately to incidents and take steps to prevent future incidents**
- **Promote and ensure full transparency**

Professional Excellence: An Earned Honor

Chief Lou Dekmar

President IACP July 2018

- The challenges we face as leaders of law enforcement organizations require us to balance varying pressures, while maintaining the support of our personnel and trust of the community
- Because of the difficulty in maintaining the public confidence, we understand the concerns that accompany the identification of shortcomings; however, those issues are just waiting to be exposed
- **We should surface those issues and resolve them under manageable circumstances before they have resulted in bad outcomes**

Red Tape: Its Origins, Uses, and Abuses.

(Kaufman, 1977)

“one person’s ‘red tape’ may be another’s treasured safeguard”

- We as citizens are largely to blame for red tape because of the demands that we generate on government and by the accompanying need to ensure accountability
- Red tape is often the inevitable price that we pay to ensure fairness and equity in the treatment of citizens
- We should cut red tape wherever possible, trying to cut too much red tape is likely to lead to arbitrary and capricious behavior on the part of government and to abuse of the public trust

Operational Transparency

- **Open and impartial**
- **Holding ourselves accountable for the work we do and the choices we make in the way the public expects**
- **Taking responsibility**
- Following agency policy, procedure, guidelines and the law
- Loyal to process
- Remaining faithful to core values, ethics, integrity, openness and honesty
- Doing the right thing in the right way for the right reasons always in all contexts
- Be sensitive to outside perspective and its nexus to credibility in an independent investigation
- Civility in differences (Opinions and theory)

The “culture” of the work unit defines everything:

- Professional Practice
- Professional Performance
- Professional Behavior
- Professional Results
- Professional Image
- Professional Reputation

Universal norms and generic ethics code for public sector professionals:

- *Act Responsibly*
- *Avoid Conflicts of Interest*
- *Do No Harm*

Bad things happen in good agencies, its how you manage it that counts...

From Dealing With Agency Errors, by Vernon Keenan and Dawn
Diedrich

Failures result from:

- Ignore the report of a problem.
- Disallow the appropriate agency command staff input.
- Conduct perfunctory investigations.
- Fail to act or discipline when appropriate.
- Demonstrate a lack of transparency.

Agency Errors Will Occur!

We can never eliminate them because we have humans working for us. We can, however, avoid becoming part of the problem in how we handle errors.

Supervisors must work to “Fact-Find” to ensure an Objective Management Position

- The majority of times issues will not die or go away. Like performance issues you MUST deal with them OR they will fester.
- **Factor in “MURPHY’S LAW”**
- Moreover, how can you manage your business properly if you “turn a blind eye” to your oversight responsibilities toward unpleasant issues.
- When you call a subordinate to get their position on an issue, you expect them to have one, doesn’t your Boss expect the same from you?

Agency Core Value

**We will not lie, mislead
or cover up.**

Span of Control

No Control	<u>Control</u>	No Control
You Cannot change what has occurred	How <u>"You"</u> address the error	The final outcome

Know Your People and remain aware

Know their baselines

Concerns (fiscal, relational or personal, ie: physical, mental and spiritual)

Watch for changes in demeanor

Examples:

Mood swings

Strange or bizarre behavior or statements

Changes in attitudes

Abnormal conduct

***When you detect these changes proactively comfort,
probe provide an opportunity for them to open the
door...***

Then, if appropriate and within the scope of a nexus to
their job reach out to the person to identify underlying
issues afoot...**THEN WATCH AND LISTEN**

Then deal with it in a specific but compassionate fashion.

If needed encourage a confidential EAP referral

NOTE: Follow your agency Policy

Understanding of the Political Landscape

Hartley, J., Alford, J., Hughes, O. and Yates, S. (2015)

- Alliance-building to achieve organizational objectives
- Formal processes and institutions of government
- Scanning factors in external environment that the organization needs to consider
- Ways in which different interests are reconciled
- People 'protecting their turf'
- Pursuit of personal advantage

Picking a way through minefields— Leadership with political astuteness for police

Roberts J. and Hartley. J. (2025)

- Political astuteness is defined as ‘deploying political skills in situations involving diverse, and sometimes competing, interests and stakeholders, in order to create sufficient alignment of interests and/ or consent in order to achieve outcomes’
- Political astuteness so that the police can remain operationally independent but are equipped to deal with politically complex situations involving diverse stakeholders in professional, constructive and impartial ways

- These are not party-political skills, concerned with advancing the interests of a political party
- Rather, the influencing skills of working in situations, often complex, where both means and outcomes may be contested within an organization, a community or in a society.

It means using key skills of understanding and working with interests in a professional, impartial and ethical way to create, in the case of public servants, public value.

Three (3) Critical Perspectives Regarding Collaborative Leadership:

Adapted from Hartley and Benington, (2011).

- Recognizing and addressing diverse interests, rather than assuming that these are shared goals.
- Requires thought about different stakeholders and what they are seeking to achieve (or avoid) in particular contexts.
- To recognize that leadership takes place in arenas where ideas may be contested, disputed or resisted

Two Types of Social Capital:

- **Bonding:** social capital creates groups that have internal solidarity.
- **Bridging:** social capital, the capacity to reach out to other groups to create larger solidarities.

If we have groups with only bonding and not bridging social capital, we have what we most fear: a society that is nothing but a collection of special-interest groups, each seeking its own good with no regard for the common good.

“Working together is easier in a community blessed with a substantial stock of social capital”

- Social ties can bring about greater control over wayward behavior
- Provide privileged access to resources; they can also restrict individual freedoms and bar outsiders from gaining access to the same resources through particularistic preferences

Social Capital is contextual. It needs to be seen in its nature of complexity, rather than just value

Ethics and Transparency become a critical perspective

Political astuteness enhances the ability of the leadership roles to ‘read’ how far it is appropriate for them to intrude into or beyond the ‘zone’ where politics and their responsibilities meet.

- The possession of political astuteness means that they have both the willingness and the ability to understand the respective domains and their place in them.

The central skill is how to operate within the “Purple Zone.”

Understanding the Appropriate Zone in the Appropriate Context

Figure 1. The 'purple zone' interface of politics and administration

Reading and Carrying are Critical Concepts

The development of skills to be able to act effectively and with integrity is critical in political contexts

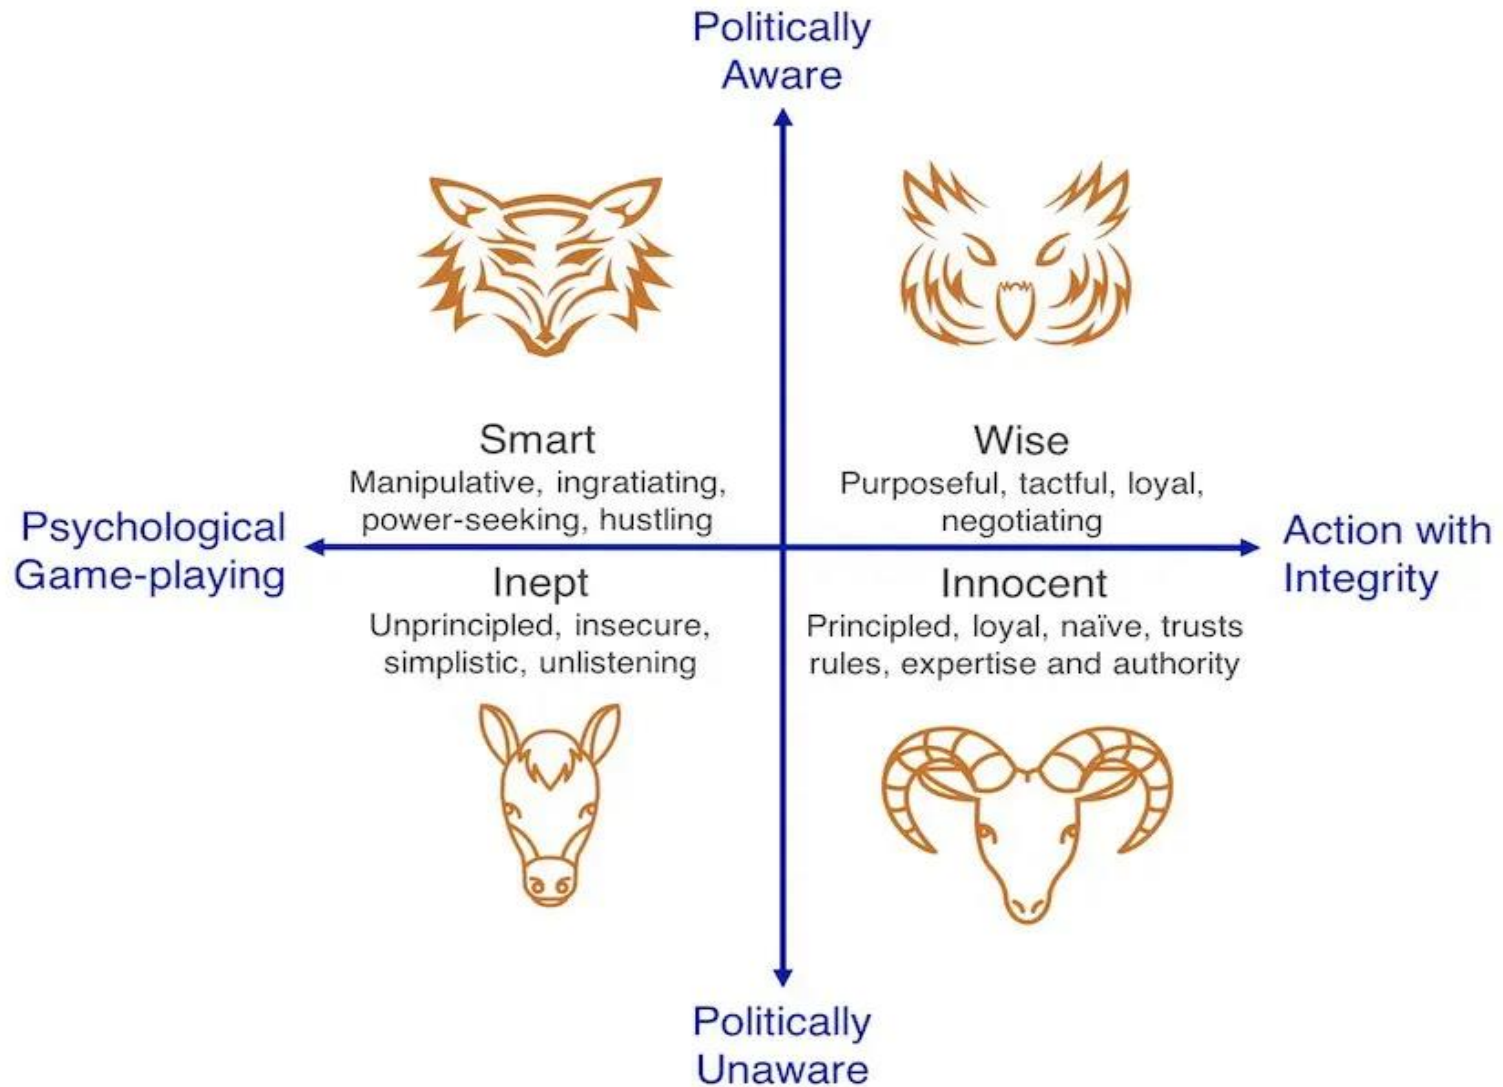

Baddeley, S., & James, K. (1987)

- The model of political skill comprises two dimensions:
 - **Reading:** the skills an individual uses to understand the context and the stakeholders
 - **Carrying:** the skills an individual uses to exercise self-control, from acting with integrity based on accepting oneself and others as they are instead of playing psychological games and being self-centered

Develop wise behaviors by concentrating on the way the dimensions of 'carrying' and 'reading' are combined.

Political Animals

Adapted from the work of Simon Baddeley and Kim James

Important Points

- Pay more attention to reading the context
- Understanding the motives of stakeholders, building alignment and alliances and constructing coalitions before you need them
- This requires a careful and sophisticated 'reading' of context and of stakeholders.

You can get better at 'reading context' over time and with relevant experience

Legal Management

HR Legal Issues

- Hiring process
- Compensation and benefits
- Leave
- Promotions
- Discipline
- Terminations
- Accommodations
- Behavior and conduct
- Performance standards and appraisals

THE THREE (3) BIG EVERYDAY, EVERY WAY APPLICATIONS FOR MANAGERS TO SUPERVISE PEOPLE

REMEMBER IN HR “YOU HAVE NO CONTROL”

You must follow the law and the rules

- The laws are written to protect the employee, error on the side of the employee
- Key to success in HR is trained supervisors (most issues are because of what supervisors do or do not do...)
- When a supervisor knows...MANAGEMENT KNOWS
- You cannot use your own values and beliefs to override HR law
- HR is redundancy
- Most issues that happen in the work place are over relationships

Key Federal Employment Laws

Nondiscrimination and affirmative action laws (EEOC ADM REMEDY)

- Title VII Civil Rights Act 1967
- Age Discrimination Act 1967
- Rehabilitation Act 1973
- Vietnam Era Vets Act 1974
- Pregnancy Act 1978
- Americans with Disabilities Act
- Uniformed Services Employment
- Genetic Information 2008

Compensation, Benefits and Safety Laws

- Fair Labor and Standards Act
- Equal Pay Act 1963
- Lilly Ledbetter Fair Pay Act 2009
- Social Security Act 1935
- Employment Retirement Act
- COBRA 1985
- Family and Medical leave 1993
- OSHA 1970
- Veterans Benefit Act 2004

Discipline and the "Hot-Stove Rule"

Douglas McGregor

- **When you touch the hot stove, you burn your hand.** (the discipline was immediate and was directed against the act not against anybody else, If you touch a hot stove you get burned)
- **You had warning that the stove was hot** (You knew the rules and policy ahead of time and had warning and knew what would happen to you if you touched the stove)
- **The discipline was consistent.** (Every time you touch the hot stove you get burned)
- **The discipline was impersonal.** (Whoever touches the hot stove gets burned, no matter who he or she is)

The 8 questions HR will ask your Command Staff

- Is the employee in a protected category (race, age, religion, gender, disability, etc.)
- Is there any evidence of unlawful discrimination playing any role in the decision
- Is there any evidence of retaliation?
- Is there any evidence of disparate treatment?
- Would disciplining the employee violate any contractual promises?
- Would disciplining the employee violate any public policy?
- Is the employee on notice? Has she/he been warned, counseled?
- Is the documentation in order?

Performance Management

Factors which Contribute to Individual Work Performance

Employee Performance

Bell curves based on statistical normal distribution are the traditional way of employee performance appraisals.

“The task of an executive is not to change human beings. Rather, as the Bible tells us in the parable of the Talents, the task is to multiply performance capacity of the whole by putting to use whatever strength, whatever health, whatever aspiration there is in individuals.”

– *Dr. Peter Drucker*

“...each according to his ability”

Diversity is woven into the fabric of creation.

THE THREE (3) KEY AREAS OF NON-PERFORMANCE

Attendance Tardiness

- Reasonable and flexible policy that is followed
- **Everyone treated consistent and fair**

Performance

- Objective standards, training and development
- Objective and fair evaluations and feedback

Conduct

- Specific to policy or code of ethics
- Objective, specific and documented

YOU CANNOT WORK AROUND PEOPLE

- You must deal with problem subordinates forthright, they deserve it, your other subordinates deserve and expect it
- Your organization placed you in your position and it is your job to do it
- You cannot walk past poor performance or improper behavior

If you walk past or turn a blind eye to poor performance, you just endorsed it !!!

The Fact is:

- You can be a super nice person to all your people.
- **BUT**, If you don't make everyone do their jobs
- Your niceness will translate into a “spineless” manager that won't hold people accountable
- **AND**, will negatively impact your subordinates lives everyday they come to work
- **AND**, you will build that reputation as that type supervisor within the agency

Never punish indirectly, by proxy or manipulate or stall because of the lack of courage to confront subordinates face to face

Never use events, acts, or occurrences to punish subordinates indirectly...

- Don't transfer people somewhere else to be another manager's problem or put them in the worse working condition to try to make them quit...
- Deal with this issue forthright and directly.
- Be honest with people and deal with the problem
- **Your people need to know where they stand with you everyday**

When a subordinate's conduct fails to meet your expectations prepare your course of action (have a plan)

- Identify the problems and behaviors(**Be Very Specific**)
- Identify how those problems impact the job requirements (Policy, standards, procedures)
- Outline the proper course of action (Your plan)
- Set expectations (Connect to policy, procedure, code of ethics etc.)
- Identify what you can use to encourage and empower (Change dynamic from correction to development)
- **Plan your employee meeting EEI's (Prepare to use 12 steps if necessary)**

Managing Marginal Employees

Steps:

- **Identify the Issues** (Specific conduct, skills, work behaviors)
- **Set Clear Expectations** (Roles and responsibilities)
- **Set measurable goals and timelines for achieving them**
- **Develop a Plan** (together)
- **Mentor and Provide Oversight**
 - Feedback Rich Environment is Critical** (Reinforcing, correction, and developmental)
- **Continuing documentation** (observable behaviors, specific, and descriptive)

Managers have a Responsibility to Their Agency

- To provide objective, specific, accurate and thorough evaluations regarding the agency's employees job performance.
- Realize that administrative writings, authored by them are official government documents.
- That these official records accurately describe the behavior and conduct of employees.
- They are bound by that which is contained within the four corners of those documents which they author.
- Must reflect the details and issues necessary to support any conclusions or judgments.

SPECULATION

Requires descriptive articulation

ARTICULATION

*Basis of knowledge supported by objective
observable facts and circumstances*

CONCLUSIONS

Justified by evidence

EVIDENCE

Supported by documentation

DOCUMENTATION

Accurate, specific, described, thorough, and complete

“Facts without interpreting their meaning”

Know when and how to document your corrective meetings

Consider:

Agency Policy, Type of issue, Gravity of problem and patterns will determine documentation

- Employee must understand the problem
- Have an opportunity to participate in the solution
- May involve training or re-training
- New procedures or protocols
- The focus is to correct and develop
- No hidden agenda or ulterior motives
- Documentation will include a plan and follow-up meeting
- Made part of the performance/job evaluation process

Value of Sound Reporting and Documentation in Agency systems

Provides upper management with a position

- Memorializes the observation, conversation, experience, action, event, incident or issue
- Creates an accurate and permanent record
- Provides a credible context
- Captures the value and continuing utility of contemporaneous notes as evidence
- Sufficiently useful to prove something important
- Provides insulation and protection
- Establishes systems and process validity to policy
- Justifies personnel actions

Documentation Keys

- Describe the **specific observable** behavior and conduct (provide specific examples)
- Describe the pertinent portion of the job description, policy, procedure, practice or work rule
- Describe the prior poor performance (In specific) and a plan with counseling and coaching opportunities to help develop and save them

“Write like it will be published and talk like you are being recorded”

Performance Management

Since performance relevant behavior is an input, it is necessary to develop techniques capable of measuring it

- First, we focus on identification of the proper behavioral dimensions to evaluate (Standards)
- Second, are issues of reliability and validity, resulting in a search for instruments which are internally reliable, stable over time, content valid, and free of rater bias

Objective Standards Measured by Performance Indicators

- Performance indicators are tools to understand, manage and improve the activities of organizations

Franceschini, F., Galetto, M., Maisano, D., & Neely, A. D. (2019).

Performance Evaluations and Appraisals

- The appraisal system and its organizational context are critical elements that play a part in the eventual employee evaluation outcomes
- These outcomes, have an effect on the employees' status in the organization and their development and productivity
- More regular reviews and catch-ups are likely to be put in the place of annuals
- **Performance appraisals should be occurring everyday**

Performance Management Issues

Employees' aversions to traditional performance reviews are strongly tied to five primary psychological obstacles:

- **Infrequent feedback**
- **Lack of clarity**
- **Manager bias, adverse**
- **Reactions to evaluation and feedback**
- **Too much focus on pay incentives**

Re-Engineering Performance Management, Gallup

Wigert & Harter, (2017)

The main problems that annual performance reviews face is that they...

- Take up a lot of time
- Are biased towards the latest period of time
- Tend to be focused on 'peaks' or 'troughs' of performance
- **Are often way too late to adjust behavioral issues**

Appraisal and Evaluation Problems

- When 2 evaluations exist, the ***official*** written copy in the HR file and the ***unofficial***, accurate one “talked” about by peers and other managers in the workplace
- When employees are rated as a group and not as individuals
- When they are used to satisfy a bureaucratic need versus an employee and agency benefit
- When supervisors do not provide feedback, mentorship and maintain performance records
- When supervisors do not put in the additional work and documentation to be meaningful

Law Enforcement Employees' Perceptions of Performance Appraisals

Zimmerman, (2018)

- Identified central tendency bias among supervisors
- Supervisors rush to prepare performance appraisals
- Employee comments on performance appraisals raise fear of retaliation
- The department does not value employee feedback

Four things have significant influence on the efficiency and effectiveness of a manager doing appraisals

Tziner, A., & Levy, S. (2016).

- **Conscientiousness**
- **Level of self-monitoring**
- **Attitudes towards the organization**
- **Beliefs about the appraisal system, including:**
 - level of belief about their own appraisal competencies
 - beliefs about how the appraisals are being used
 - orientation towards the appraisal system

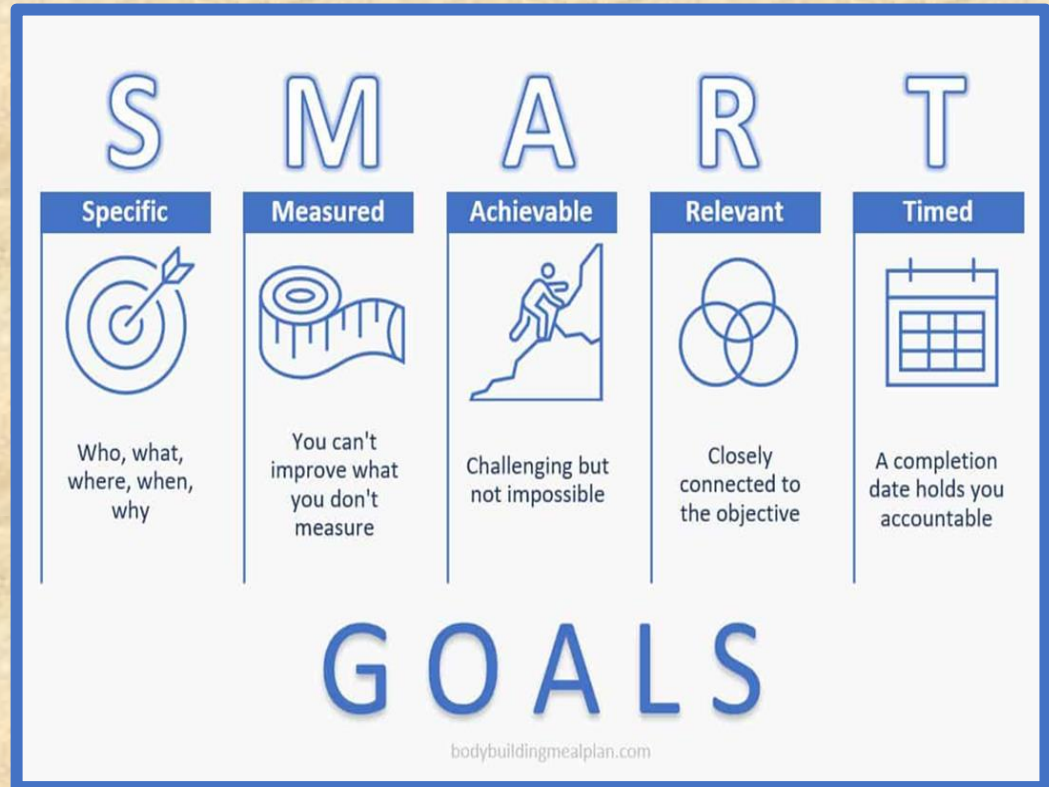

The Blueprint for the Construction of an evaluation

- Detailed, up to date, thorough and comprehension job description that they know and understand their responsibilities and duties
- **Ensure you have communicated, and they understand their performance Expectations**
- Digestion of all policies and procedures where the understand the rules
- Training on the job responsibilities, policies and procedures
- Mentorship and Coaching
- **Timely and specific documentation with Mid Point and MRF if needed**

Performance Expectations and Demands

Expectations

- *SPECIFIC*
- *MEASUREABLE*
- *ACHIEVABLE*
- *REALISTIC*
- *TIMELY*

Three meta-demands or dimensions of job performance

(Wigert & Harter, 2017)

- Setting goals and meeting them
- Partnering for effectiveness
- Translating work into its consequences

THE PM&D PROCESS

Feedback-rich
Environment

OBJECTIVE

**EVALUATION
AND
APPRAISAL**
Specific
**DESCRIPTION OF
PERFORMANCE**

Rating performance to a standard involves evaluating an individual's performance against the predetermined set of criteria or benchmarks.

- **Focus:** Measure how well a subordinate has met or exceeded the established expectations or goals

Critical Steps:

- **Define the standard:** Clearly establish the criteria or benchmarks that will be used to evaluate performance
- **Gather performance data:** Collect relevant data and evidence that reflects the individual or team's performance (performance journal, activity data etc.)

- **Compare performance to the standard:** Compare the collected performance data against the established standard.

(Assess whether the individual has met or exceeded the expectations set by the standard by describing observable and specific behavior)

- **Communicate the results of the performance evaluation to the individual**

“The critical importance of the feedback-rich environment”

Keep A Performance Journal

Your agency may have a program or procedure

- An ongoing and routine process of capturing observations of behavior and conduct as it applies to the agency standards
- Notes to transfer to your appraisal work, to ensure accuracy in evaluation
- Document performance in behavioral terms, rather than inferential or judgmental
- List the performance expectations and goals for the appraisal cycle and space to document date, skills exhibited results of behavior and other comments
- No secret employee files or dossiers, provide the feedback on performance events to your employees that you document
- **Ensure compliance with Agency HR Policy**

Other Performance Appraisal Sources

- **Work Products of the Employee:** copies of work that illustrate the performance dimensions being measured
- **Other Agency Reports, Documents, Data Sources or Memoranda** (REMEMBER: Data must have an objective basis against an agency standard to be transformed into credible and meaningful information)
- **Employees Personnel File:** letters of commendation, appreciation awards or reprimands (**Follow Agency Policy**)

Employees should *Never Ever* be surprised at the six month or annual performance review

- Employees should always know where they stand
- They should be receiving continuous and on-going feedback (praise and critical)
- **The leader must have the courage and specifics to confront employees with issues**
- If there is a problem, leaders make them aware and formulate a plan supported by mentorship and ongoing documentation focused upon their development

Bottom line

- You give them the knowledge and teach them how to perform.
- Explain the specific and clear expectations of the job.
- Provide mentorship and coaching.
- Follow-up and document results with them.
- Make every attempt to develop them with regular **objective and specific** feedback regarding their performance expectations
- But, if they can't do the job...they are a liability to the entire organization and must be dealt with properly.
(FOLLOW AGENCY POLICY PROCESS)

Performance Ratings Continued

- Rate everyone as an individual to the agency **STANDARDS** in place
- Never rate individuals against other individuals or you.
- Maintain good records, document conduct, activity and feedback regularly during the reporting period so that ratings will be based on a comprehensive view of performance rooted in objective criteria
- **Transparency:** ensure subordinates know where they stand (**No secret performance files or documents**)

Evaluating Subordinates Performance

- Evaluate “**observable and measurable**” work performance issues
- Ensure you are “**objective**” in your perspective of your evaluation
- Be able to articulate from the facts and circumstances the “**specific**” observable conduct, behaviors or lack of, and how such relates to the job description, policy or mission

Document **Specific** Performance and Behavior

- Document the excellent , good, fair, poor and unacceptable
- Go over it in their presence so they : **a) know it, b) understand it, c) have an opportunity to choose how they will perform in the future**
- Provide them every opportunity to succeed, but if they cannot then use the documentation to provide the fair and objective cause to deal with them

Provide an objective review...DO NOT FALL VICTIM TO RATER BIAS

An Overview of 10 Common Rater Biases

- **Varying standards:** Similar performance is rated differently
- **Sampling Error:** information is stale, insufficient or inaccurate
- **Halo Effect:** the tendency for a single positive rating to cause raters to inflate all other ratings or a bias toward someone you like
- **Horns Effect:** the tendency for a single negative attribute to cause raters to mark everything on the low end of the scale or a bias toward someone you dislike

- **Central Tendency Bias:** raters to score every question on a scale near the center
- **Leniency Bias:** rater is lenient and is going “too easy” on the employee
- **Strictness Bias:** rater is “too hard” on the employee
- **Contrast Effect:** raters draw comparisons to other employees
- **Recency Bias:** recent performance or behavior overshadows or distorts the entire periods performance
- **Like Me Effect:** you favor someone who is similar to you

The effects of performance rating, leader-member exchange, perceived utility, and organizational justice on performance appraisal satisfaction: applying a moral judgement perspective

Dusterhoff and Cunningham, (2013)

- The performance appraisal process is increasingly seen as a key link between employee behavior and an organization's strategic objectives
- Unfortunately, performance reviews often fail to change how people work, and dissatisfaction with the appraisal process has been associated with general job dissatisfaction, lower organizational commitment, and increased intentions to quit

- Researchers have found that appraisal reactions are affected by perceptions of fairness and the relationship between the supervisor and the employee
- Performance appraisals enable employers and employees to define, communicate, and review expectations, goals, and progress in achieving strategic objectives (Bacal 2004).
- The purpose is to improve the way employees contribute to an organization's goals and job performance
- Appraisals are also intended to sustain, improve, and help an employee develop and to overcome barriers to performance

- If done well, performance reviews fulfill an important organizational need to provide feedback, guide, and encourage people to develop their skills and focus their performance toward organizational priorities and objectives
- There is a growing consensus among researchers and practitioners that the success with the performance appraisal process is extremely important in encouraging employee development and motivation
- The performance appraisal process is increasingly seen as a key part of the strategic approach to management, in providing a tool to facilitate the linkage between an employee's competencies and behaviors and an organization's strategic objectives

- If managers expect to use the performance appraisal process to encourage employee development and performance, employees have to be view it positively and generally be satisfied with it
- If employees are dissatisfied and feel the process to be unfair, they are unlikely to accept and use the results of the appraisal
- Employees who are more satisfied with the process are more likely to agree with their evaluation and see it as useful in improving their performance and development.
- Positive employee reactions and agreement with the performance appraisals are linked to an improved understanding between manager and employee, motivation to improve performance and actual improvement

Over the last few years, researchers have pointed to a number of factors that are related to employee reactions to performance appraisals.

- Providing more positive feedback in the performance appraisal is seen as one way to improve the performance review process
- Appraisal reactions are affected by perceptions of fairness
- The importance of the relationship between the supervisor and the employee, suggesting that a more positive leader–member relationship is more likely to result in higher employee satisfaction and agreement with the process

- Employees may judge a performance appraisal from the perspective of its moral justifiability
- Researchers have typically measured appraisal reactions in terms of appraisal satisfaction, motivation to improve, perceived accuracy, and perceived utility
- Appraisal satisfaction was the most frequently measured reaction, perhaps because it affects important outcome variables, such as motivation, commitment, and productivity
- Two forms of appraisal satisfaction have been distinguished; satisfaction with the appraisal session, and satisfaction with the wider appraisal system.

Administrative Management

Administrative Burdens Regarding Staff Records

First and foremost, keep and maintain GOOD DOCUMENTATION

Second, sustain an ethical mindset for transparency

Next,

- Maintain up to date status for all records
- Meet deadlines
- Document accurately, thoroughly, and completely
- Document good and poor performance
- File Reviews for Oversight
- File Maintenance
- File Security (passwords, access, etc.)

Administrative Burdens

Property

- Inventory
- Maintenance
- Accountability
- Surplus

Money / Hours

- ❖ Internal Controls
- ❖ Divisions of responsibility
- ❖ Audit

Evidence

- ☐ Well documented
- ☐ Secure
- ☐ Inventoried

Management of a work unit must be all inclusive.

“A total package concept”

Office

- o Professional Standards
- o Proactive Relationship/ Mentorship
- o Healthy And Psychologically Safe Workplace Environment
- o Functional

Operations

- o Professional Practices
- o Operational Oversight
- o Design, Train And Supervise Policy
- o Stakeholder Management

Administrative

- o Exemplary Documentation
- o Timely Reporting
- o Sound Systems, Processes and Functions
- o Administrative Oversight

**Officers don't write outstanding reports, great memo's ,
craft outstanding affidavits, conduct exemplary raid
plans, and build solid case files by accident.**

**They don't know their roles, job, and conduct
themselves professionally by accident.**

**They were taught and required to sustain the high
standards by a work units management and
professional culture... "They were managed to manage
themselves."**

IN SUMMARY

- **The Burden of Self-Awareness:** Manage our mindset, attitudes, emotional reactions to feedback, effectively practice self-reflection, and enact self-regulatory processes for development
- **The Burden of Competency:** Know our job, constantly grow and develop. Be sensitive to context and use the four-frame model to critically think and make informed decisions
- **The Burden of Servanthood:** Remain a servant to the higher duty, organization and our people. Build the ROCC of trust and be procedurally just
- **The Burden of Communication:** Listen, observe, be empathic and strive to understand before judging then be strategic in framing communications to shape the context
- **The Burden of Management:** Facilitate sound management with good leadership, be purpose driven, performance minded and hold people accountable

How Character Manifests in Culture

DIMENSION	IF PRESENT	IF ABSENT
Judgment	Recognize key issues; solid decision-making	Poor decisions, confusion, and resistance to change
Courage	Decisions are made; opposition to poor decisions; innovation thrives	Agreement of poor decisions; satisficing rather than maximizing is the norm; moral muteness prevails
Drive	Sustained momentum around focused priorities and high productivity	Lethargy and low productivity
Collaboration	Effective teamwork enhancing productivity; diversity in teams	“Every man for himself” mentality; lack of information sharing
Integrity	Trust, transparency, and effective communication	Operating from a position of self-interest and mistrust
Temperance	Effective risk management; thoughtful consideration	Short-term gains dictate strategy; desire for instant gratification
Accountability	Ownership; commitment to decisions	Failure to deliver results and take responsibility
Justice	Fairness fostering trust; going above and beyond	Inequities exist; favoritism and nepotism
Humility	Willingness to identify and discuss mistakes; support of continuous learning	Arrogance and overconfidence; complacency
Humanity	Deep understanding of what is important to stakeholders	Failure to acknowledge critical social interactions
Transcendence	Commitment to excellence; clarity and focus; inspiration motivates innovation	Narrow goals and objectives; failure to acknowledge, appreciate, and strive for excellence; not inspired

Source: “Make Leader Character Your Competitive Edge”
By Mary Crossan et al., *MIT Sloan Management Review*, October 2022
sloanreview.mit.edu/x/64203

Character Dimension	Deficient Vice	Virtue	Excess Vice
Accountability	Deflects	Takes ownership	Can't delegate
	Unaccepting of consequences	Accepts consequences	Burdened
	Negligent	Conscientious	Obsessive
	Irresponsible	Responsible	Controlling
Collaboration	Self-centered	Cooperative	Conflict avoidant
	Confrontational	Collegial	People-pleasing
	Narrow-minded	Open-minded	Abstract
	Inflexible	Flexible	Compliant
	Disconnected	Interconnected	Can't discern boundaries
Integrity	Fake	Authentic	Uncompromising
	Untruthful	Candid	Belligerent
	Manipulative	Transparent	Indiscriminate
	Unprincipled	Principled	Dogmatic
	Inconsistent	Consistent	Rigid

Seven Moral Challenges of Leadership

Emler, N. (2019)

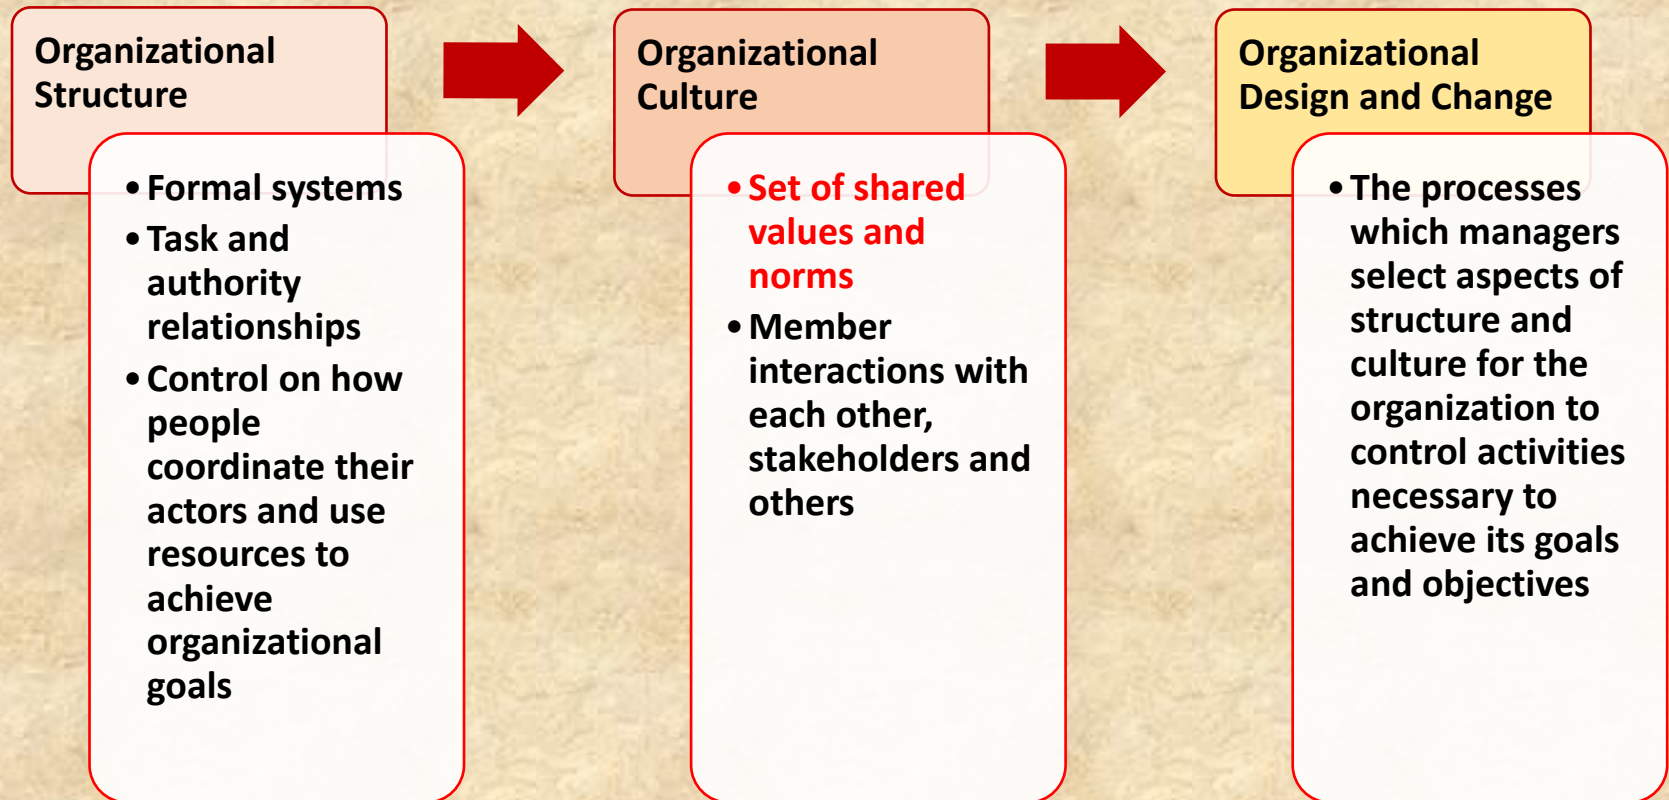

It is the wealth of opportunity combined with the weakness of deterrents that corrupts

Character counts

- **Positions of Trust**—*The Temptations of Personal Gain*
- **Positions of Power**—*The Attractions of Tyranny*
- **Positions of Authority**—*Ensuring Justice*
- **Positions of Obligation**—*Pursuing a Moral Mandate*
- **Positions of Responsibility**—*The Risk of Mission Failure*
- **Positions of Care**—*Avoiding Collateral Damage*
- **Positions of Opportunity**—*Doing Good*

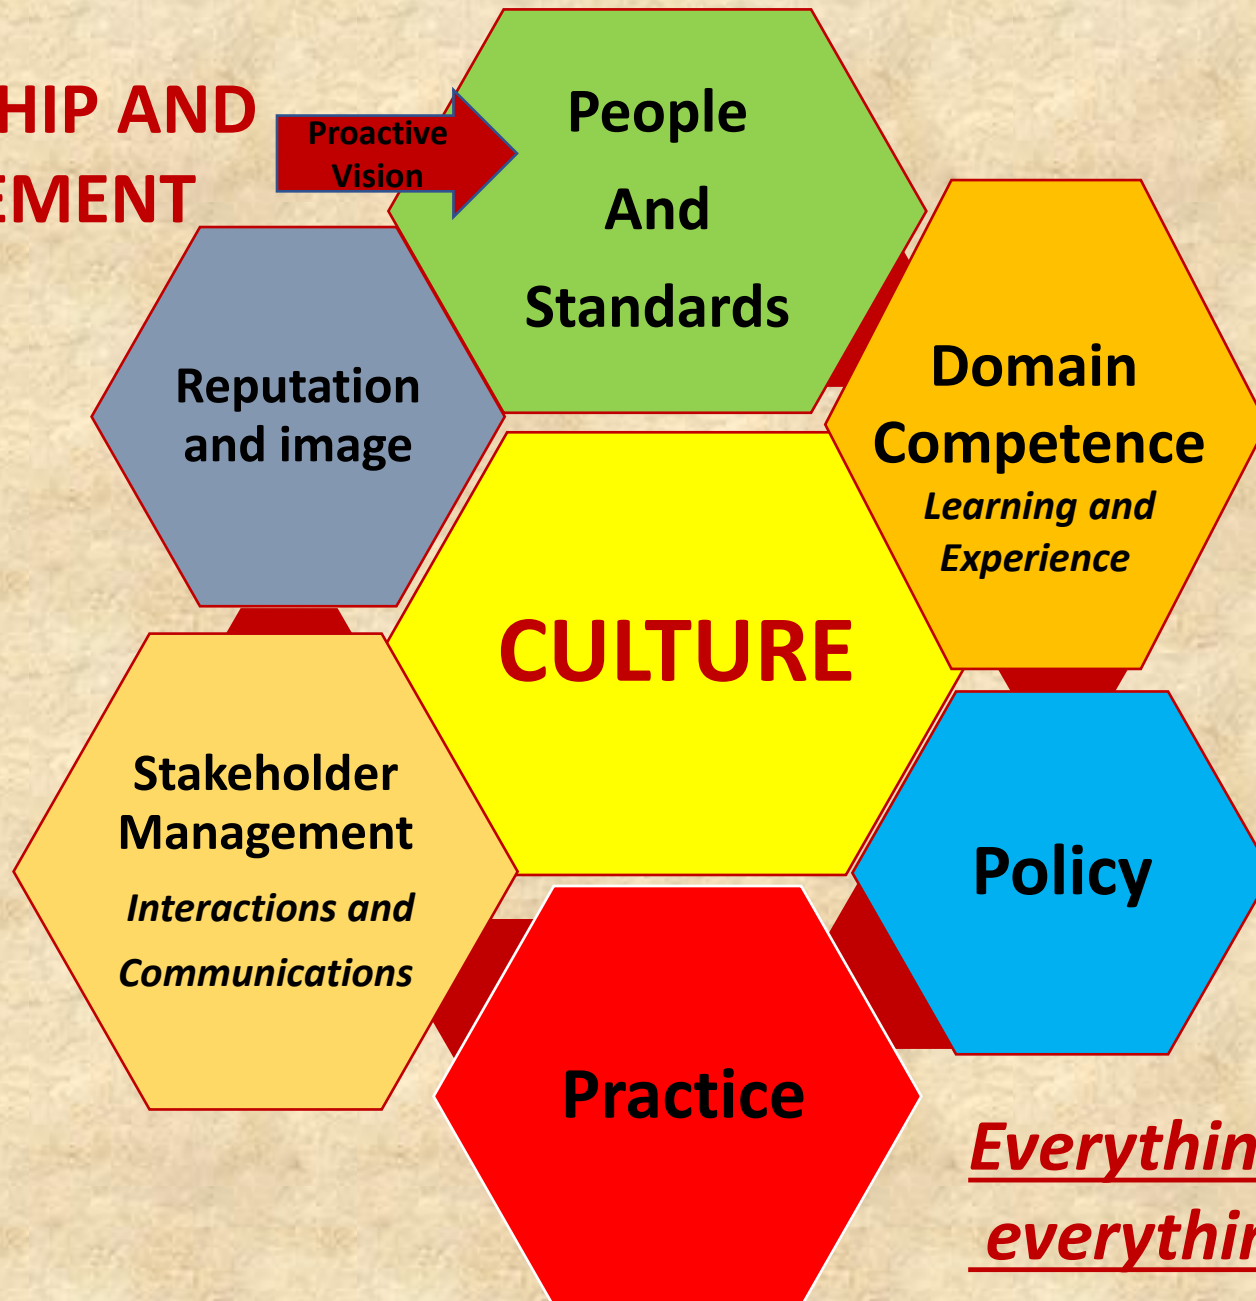

Organizational Theory

How organizations function and how they affect and are affected by the environment they operate

Management is an Ecosystem

**LEADERSHIP AND
MANAGEMENT**

*Everything effects
everything else*

BLESSED are the
PEACEMAKERS
FOR THEY SHALL
BE CALLED THE
CHILDREN
OF GOD Matthew
5:9

Find the face of God in any person you meet

“Spirituality is recognizing and celebrating that we are all inextricably connected to each other by a power greater than all of us, and that our connection to that power and to one another is grounded in love and compassion.

Practicing spirituality brings a sense of perspective, meaning and purpose to our lives.”

— Brené Brown, *The Gifts of Imperfection*

God Bless And Keep You All

"It's a burden to command, and a blessing to have the opportunity."
